George H. Biles, assistant State highway commissioner, had been billed to speak on "Highways, Past and Present," but was unavoidably absent. His place on the program was taken by Thomas McDowell, field representative of the State Highway Department.

"Getting Back to Salesmanship" was the subject on which G. Lynn Sumner, director of advertising for the International Correspondence Schools, of Scranton, addressed the delegates, accentuating integrity and concentration in business.

Benjamin G. Eynon, registrar of motor vehicles, automobile division, State Highway Department, spoke on "Evils of the Highway License Bureau," in which he warned the members that "while the effect of accidents on sales is negligible just now, the time will come when the accumulated force of abuses will fall with a crashing blow on the industry." Reckless driving and the large number of motor accidents, he asserted, will result in the enactment of laws greatly restricting the use of the automobile, unless the industry actively assists in curbing these abuses.

Digitized by Google

Following adjournment for the day at 5 o'clock, the delegates were taken to the Harrisburg Country Club in automobiles provided through the courtesy of the Harrisburg Motor Dealers' Association, Charles H. Barner, chairman, attending to that detail. A banquet at the club had been provided for and close to 160 delegates and guests sat down.

Ray Sherman, merchandising director of the Automotive Equipment Association, Chicago, made an address on "Shop Profits," in which he reviewed the "Ask 'Em to Buy" movement and stressed what he termed the "everlasting aftermarket" presented once a car has been sold and the owner drives up repeatedly for gasoline, air, or other necessities.

The first speaker at the session Tuesday morning in the Senate Chamber was Dr. J. M. Thomas, president of State College, State College, Pa., whose subject was "Education for an Age of Machinery."

At the conclusion of his address, Dr. Thomas was given a vote of thanks and the association later passed a resolution placing the organization on record as being in favor of the emergency building fund campaign of State College. A movement was started among the delegates to pledge several thousands of dollars toward the project.

How to Get Efficiency

What was considered as the most interesting address of the convention, was made by A. R. Kroh, of the educational department of the Goodyear Tire & Rubber Co. He spoke on "How to Get Efficiency from Sales and Service Organizations," or at least that was the topic that had been selected for him; but his address was an eloquent plea showing the delegates the great importance to the entire country and every industry, especially the automotive trades, of supporting the "business of agriculture," which, he showed by facts and figures is really the greatest business the country has, with its $78,000,000,000 invested, and not second to the steel industry as commonly supposed, which has only $36,000,000,000 invested. He followed up Dr. Thomas' address by urging the delegates to support the work of the college both morally and financially.

The "marvelous educational advantages" presented by the trade papers in the automotive field were referred to repeatedly in his address by Kroh, who said that dealers and others in the industry should make it their duty to read these journals and learn the opinions of others in the trade; follow their methods and development as shown therein and disseminate this information among their salesmen and service shopmen. He deplored the attitude of those in the industry who declare they haven't time to remove the wrappers from the trade journals and asserted that they would be a step ahead and much better off if they were to read and study them. "The trade papers of the country have spread a great educational feast," declared Kroh, "but the trade papers in your particular business are the best in the world."

Kroh cited figures and facts to show that the automotive industry is second only to agriculture. On the subject of increasing efficiency, Kroh said about the most useless thing in the world is the average factory representative, who is willing, apparently, to tell everything else to the dealer but how to sell more automobiles to the buying public. He asserted that the buying public is thinking of economy, efficiency and service more than ever before, and if it is forced to pay service overcharges, it is apt to regard the whole trade unfavorably and set up a bad influence. Kroh emphasized the rapid growth of the automotive industry in its 22 years and showed that something is wrong in a business where 40 per cent of the labor costs never have been paid and 30 per cent of the gasoline and accessories sold never have been accounted for on the books, citing such results as showing a lack of intelligence in the business. He also reviewed the great opportunities in the trade, where a mere "grease hound" in the first year makes more than does a lawyer in his starting twelve month. "You owe a duty to the buying public," Kroh asserted. "You cannot succeed by slave-driving; but you can by selling your employes the 'higher hunch,' such as the major sold Sergeant York, when he convinced the man who started in the war as a conscientious objector that he was called by God to do what he could to win the war."

Kroh asked the delegates to heed the fact that 85 per cent of the automobiles are sold through some feminine influence. "Get acquainted with that influence," he said. He deplored the giving of too liberal allowances on traded-in cars as very bad business and stressed the value of establishing the confidence of the customer and continuing it after the sale of the car, through a suitable letter from the head of the business, and through the 'follow-up' of the salesman asking the customer what there was about the car that made him buy it, so he could use the answer later in his sales argument and what there was about him that made the owner purchase the car from him. He told of the feelings of an owner the first three days after the purchase of a car, described his enthusiasm and the pride taken in having his judgment justified. He closed with a strong plea to the delegates to see that the business is professionalized and that the dealer is insistent upon getting a legitimate profit on every transaction, or letting the customer go.

It was decided by the convention to adopt for the association the slogan, proposed by "Doc" Williams, Ford dealer, Harrisburg, "Drive on the Right and Walk on the Left," as being in the interests of safety.

"Human Exhibits" Used in Scientific Salesmanship Talk

PHILADELPHIA, Nov. 23—"Human Exhibits," the election of a new set of officers and directors and a good dinner were among the factors contributing to the entertainment of the members of the Automobile Accessories Business Association and their guests, at the November meeting, held at the rooms of the Philadelphia Automobile Trade Association, last Friday evening.

The "Human Exhibits" alluded to were three prominent members of the association selected by one of the speakers of the evening, who indicated them as embodiments of the three representative types of prospects met with in automotive salesrooms, namely, the Mental type, the Motive type and the Vital type.

President W. Howard Metcalf, head of the association for the last four years, retiring because of his recent election as a member of the State Legislature, presided. The election of officers and directors resulted as follows: President, Guy S. Lane; vice-president, Ralph J. Cahall; secretary, N. A. Petry, and treasurer, R. A. Harp. Directors—W. Howard Metcalf, John Monahan, A. W. Stellwag, C. H. Walz and J. M. Willitts. These will serve one year. Directors whose terms will not expire till a year from now are George L. Fischer and George B. Shearer.

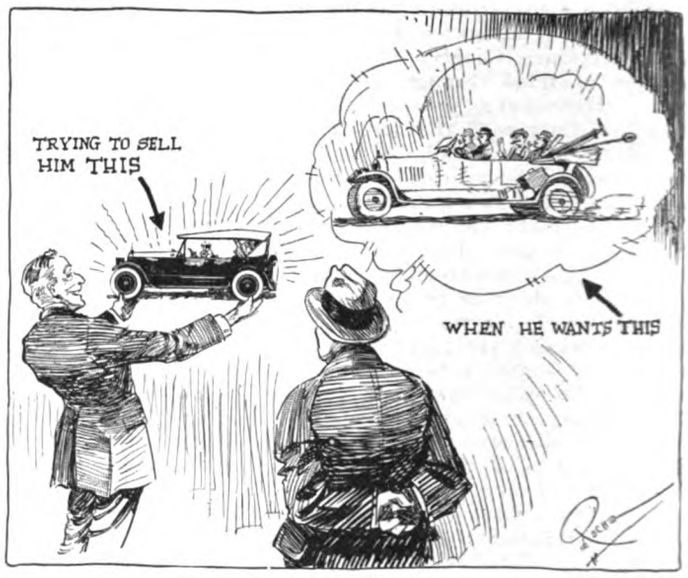
It was Gordon J. A. Hargraves, who designated W. Howard Metcalf, Guy S. Lane and W. A. Jones of Mount Holly, N. J., as the "Human Exhibits," asking them to take front seats. Hargraves is head of the Hargraves Selling System, New York, and a business counsellor. His subject was "Scientific Salesmanship," and the burden of it was that salesmanship of the right sort consists in the study of human nature and then acting on that information. Selecting Metcalf, the speaker declared that he was of the mental type and should such a prospect enter the automobile salesroom, the argument should be along the lines of interesting him especially in the construction of the car and the excellence of its mechanism and how it co-ordinates.

Indicating Lane, who is large and energetic, the speaker said:

"To sell a car to this motive type, I would lift the hood and show him the motor, emphasize the speed of the car and demonstrate that it was calculated to carry him far, at a rapid rate, without undue wear or tear."

Turning to Jones, who is stout and florid, Hargraves said:

"I would attempt to sell this vital type on the basis of how comfortable the car cushions are and how smoothly it runs."



Jones then admitted that he was so impressed by the comfort of a car himself that only recently he had sold a car to a prospect on the basis of luxurious cushions and easy riding facilities alone.

The association will hold its annual smoker in December.

Lost Sales

By NEAL G. ADAIR

"AND now," said Reilly, "let's have a little conversation about the sales we *lost*."

"Hot dog!" murmured an irreverent salesman, whereupon the sales organization of C. J. Reilly, Inc., which had spent its last two months of weekly meetings brushing up on the new line of Sennett cars, started on an excursion into its recent past that proved to be decidedly interesting.

"Let's see," Reilly continued, "Georgie Roper, here, had Doc Smith pretty well lined up for a coupe, but he jumped over to the Redman at the last minute. How did it happen, Georgie? Did the Redman folks hike up the bid on his old car?"

"No, I understand not," the salesman replied. "They gave him $600—just what we offered."

"Any idea why he switched?" Reilly persisted.

"Wish I had," Roper answered.

"H'm. How did you go at the Doc? What was your top notch argument?" Reilly asked.

"Well, I used the cream of the high spots in the new catalog," said Roper. "Told him about the new valve mechanism, the improvement in the lubrication system and the new lines of the hood."

"Have any idea what the Doc wanted to use the car for?" Reilly asked.

"To shag around town—same as any doctor, I suppose," Roper replied.

"Tell him anything about the extra wide doors, the ease of steering that's been one of the Sennett's big points, the sunshade and automatic windshield cleaner?" Reilly continued.

"But that's old stuff," Roper protested. "We were talking that stuff last year."

"To last year's prospects—sure," conceded Reilly, "but Doc Smith wasn't one of them. And—well, you say the Doc wanted a coupé to shag around town in. Most likely you're right, and what kind of a car did he want? One that would be easy to get in and out of, because he has to do that a good many times a day; one that steered easily, to save time in turning and parking; and one that he could drive without any worry about the weather—isn't that about right?"

"Sure, but—" began Roper.

"And, Georgie," Reilly interrupted, "you talked to him about valves and lubrication and cowl lines, which the Doc probably took for granted would be all right in any good car. You forgot all about what he was going to use the car for. I suspect somebody over in the Redman organization didn't forget, with the result that the Doc thinks his new coupè is the most comfortable, convenient and generally useful automobile, for his business, that was ever invented."

"Maybe," Roper admitted, and Reilly turned to Jack Mellon, who had had Samuel Hopkins, the lawyer, almost up to the dotted line when he shied at something and bought a De Luxe sedan.

"What about Hopkins, Jack?" Reilly began.

"Just bolted, that's all," the salesman answered. "All set for the final interview when I heard that he had fallen for a De Luxe."

"And what did you try to sell Hopkins?" Reilly began. Don't get the idea I'm criticizing you—or you, either, Georgie. I'm just hoping we can drive some things out into the light that will help all of us."

"Well, I naturally hopped into the appointments of the new sedan," said the salesman. "Made a play of the new type of doors and handles, the touring trunk mounted at the rear and—"

"Do you know Hopkins very well?" Reilly asked. "Know anything about his family and so on?"

Mellon shook his head.

"Well, it happens that I know quite a bit about the Hopkins family through some neighbors of mine," Reilly said. "There are five in the family, and they use their car to drive around town and for short trips out in the country; never took a long trip that I know of and probably won't for some years because their three children are very little ones. I can't imagine they got much excited about the touring trunk and the new door features—but they surely would have liked to hear a lot about the roominess and comfort of the interior, the easy riding qualities and some other things that would particularly interest a father and mother of a growing family."

"Maybe," Mellon admitted, in much the same fashion as Roper.

Reilly cast his eye down on a little card covered with lost sales notations, then passed the list over to Tommy Trumbull, who generalmanaged sales and a lot of other things around the Reilly establishment.

"Any more hot stuff on there, Tommy?" he asked.

"Here's a five-passenger job we should have sold to John Kerwin the contractor," Tommy said. "How did he happen to get out of the pasture?" he inquired of Tony Miller.

"Oh, he bought a used car from the Empire folks," Miller said.

"Did you try to sell him a used car," Trumbull demanded.

"Didn't know he wanted one," Miller responded.

"How did we get him on the list?"

"He came into the salesroom," said the salesman. "Said he was interested in a touring car. Seemed to like our job, though he hinted the price was pretty high. Wouldn't close on my second call following the demonstration, and the next I heard he was driving a used Empire."

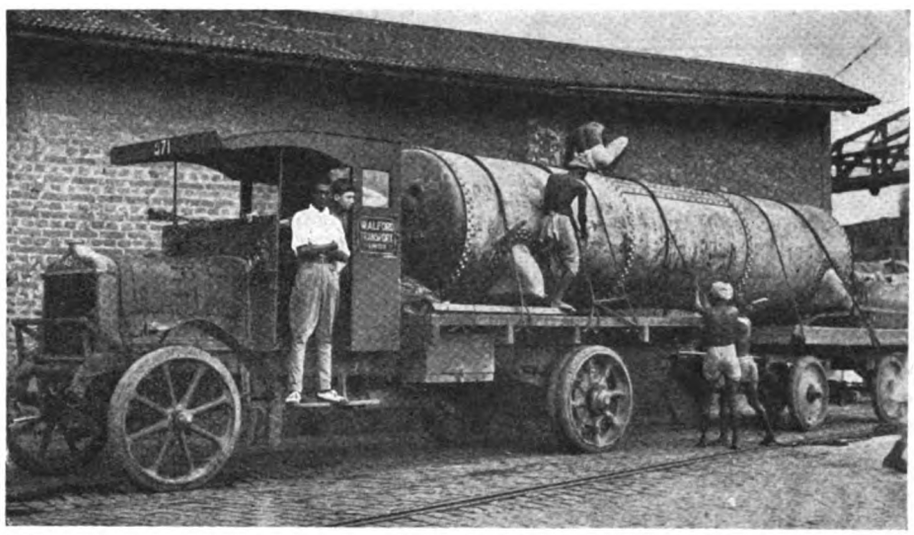
"Queer you didn't switch to a used car when he complained about high price," Trumbull suggested.

"Why?" asked Miller. "He's making money, big contracting business and all that. Seemed like an insult to talk used car to him."

"And there's just where you missed hooking on to a fast one," Tommy replied. "Kerwin has the money all right, but he wanted this car for inspection work around his contracting jobs—that's what he's doing with the old Empire. Has to chase around in all kinds of weather, sometimes over bum roads, sometimes across open fields; picks up sub-contractors and foremen and even tools sometimes. Needs a car with guts in it, but doesn't give a hang about looks. We should have sold him that kind of a car, and we have several of 'em that we wouldn't mind getting rid of at all."

"But I didn't know—"

"And that's just the trouble with us," Reilly declared, again taking a hand in the conversation. "We don't know. We get ourselves all primed on the car, which is fine—absolutely necessary, but we don't use our ingenuity to learn what the prospect will be most interested in, so as to play up the most effective parts of our story. We can't sell 50-miles-an-hour to a doctor who has got to put in his time threading his way through city streets. We can't sell streamlines to a business man who wants to pack a big family into a car that boasts mostly of comfort.



"We've all got to know the story of the Sennett, of course, and all tell fundamentally the same story, but we can't shut our eyes and go at it like a fat man doing his daily dozen.

"Our first job, always, is to find out what kind of a fellow our prospect is and what he wants a car for and then—"

"Sell him the car he wants," said Tommy Trumbull.

Interesting Things Automotive

Motor trucks are coming into increasing use in many countries of the Far East. Here we see one of the trucks of a Calcutta Transport Co., handling an 8-ton boiler, 25 feet long

Motor vehicles only is the rule on Manhattan Bridge, that great suspended highway over the East River connecting Manhattan Island with Long Island. The rule was made recently when a shifting of cables on the Brooklyn Bridge caused a flurry in engineering circles and it was decided to restrict the Brooklyn Bridge to horse-drawn traffic as causing less vibration. On Manhattan Bridge traffic passes to the left at the rush hours to prevent the crossing of the traffic streams at Canal and Bowery, near the New York entrance to the bridge

A prominent drug firm of St. Louis has installed a number of trucks to take the place of sample trunks for salesmen. Now, instead of a salesman having to travel around the country on trains with an assortment of trunks containing samples, he is outfitted with a truck the interior of which is fitted up with shelves for the display of his samples, small packing cases to take the samples into hotels and stores and a chauffeur assistant to take him any place at any time he desires

Editorial Notes

What the Sport Car Teaches

DEALERS and garagemen who doubt the willingness of car owners to purchase extra equipment might well take a lesson from the success of manufacturers in selling sport models, that is, open cars equipped with the best of modern devices to improve operation and appearance. The hold which the sport model idea has taken on the public indicates that the car manufacturer has been a little quicker than the dealer in seizing the opportunity to profit by the desire of a great many car owners for what might be termed thoroughly equipped automobiles.

If the sport car can be sold with the cost of front and rear bumpers, windshield wings, extra tires and covers, sometimes a trunk, a windshield wiper and numerous other articles of equipment included in its price, why cannot the dealer sell some of these articles with a new car not so equipped, and why cannot the garageman who is servicing a car lacking many of these articles of equipment get the owner to install them?

There has been a strong trend toward the sport car, both because of its appearance and its features of comfort and convenience. It is an indication of what the public wants and equally an indication of what the automotive equipment merchant can sell if he will adapt the sport car idea to his own sales methods.

Demonstrating Tools

A BIT of travel about the country will convince almost any careful observer that there is opportunity for a widespread work in demonstrating to the dealer and garageman the usefulness of shop equipment and tools.

All dealers and garagemen know the purposes and money saving abilities of some garage equipment items, but the average man in the trade could stand a good deal of enlightenment regarding many purposes of shop equipment with which he has never had an opportunity to become familiar.

It would seem that the wise jobber would be doing a service for the trade of his territory, as well as building profits for himself, if he would perfect means of showing and demonstrating shop equipment in such a way that dealers and garagemen would get a wider understanding of the subject than they now have. It is impossible, of course, for jobber salesmen to carry heavy equipment with them for demonstrating purposes, but a good many men in the retail trade make periodic trips to centers where jobbing houses are located and jobbers in these places would very likely find it worth while to devote space to showing and demonstrating equipment, and to have men available to explain its working to visiting retailers.

It should be borne in mind that the use of machine equipment is a comparatively new development in the automotive maintenance field. Both wholesale and retail branches of the industry yet have much to learn about it and the jobber who contributes to this educational practice will not only have the satisfaction of helping to improve the condition of the trade but he will be repaid for his efforts.

Be Careful

THERE is a lesson for dealers, garagemen and others using gasoline tanks in what has happened in Massachusetts within the past few weeks. One Sunday afternoon recently five boys were playing in the rear of a building formerly occupied as an accessory store. A gasoline tank, long unused, was on the ground waiting to be taken away Monday morning. An explosion occurred, four boys were killed and another badly injured.

A couple of weeks later within a few miles of that accident another tank was being removed. It had been in the ground for some years. Since 1916 it had not been used. As the workmen were loading it on a truck flames sprang up about the vehicle and communicated to the feed pipe of the tank. An explosion followed, blowing out both ends and fatally injuring a boy some distance away. It is believed that in both cases some one was smoking, and in some way the residue in the tank became ignited. As a result the Massachusetts authorities have issued an order that no tank may be moved in future except under the direction of the chief of the fire department.

There are thousands of unused tanks scattered about the country. They are being dug up from time to time to be replaced by new ones, or to be taken away and used somewhere else. Therefore, men identified with the automotive and oil industries should take the lesson of Massachusetts to heart and see that the removal is safeguarded. Unused tanks are as dangerous under some conditions as unexploded shells on a former battlefield. If the men who read this editorial will call it to the attention of all their employees NOW it may be the means of saving lives in the future.

SOME of the happiest dealers in the country are those fellows who will have just so many used cars and no more. When they reach the maximum they quit trading. They are happy because cash assets are so much more negotiable than assets tied up in used car stocks.

Should Time Payment Financing Include the Used Car?

New Hampshire Dealers Contend This Would Help Lighten the Burden—Association Issues Series of Advertisements to Enlighten Public

EDITOR Motor World:—It seems to be an acknowledged fact and a generally accepted idea that used cars constitute a serious problem. Webster's Common School Dictionary defines the word "problem" as "A question to be solved." There is another term often applied to used cars, for many speak of it as a "menace." The dictionary defines "menace" as "A threat" or "To threaten." If we confine it to the lesser of the two evils we still have a problem or a question to be solved and naturally the inquiry is, "Whose problem is it and how is it to be solved?" Up to the present time it has been considered a dealer's problem and has been left largely to the dealer to solve. Hundreds of thousands of dollars have been spent by the dealers of the country in their effort to solve the used car problem, but it is as yet unsolved and that is why most dealers term it a menace, and when a situation arises which constitutes a threat to an industry then is the time to face the facts and draw conclusions as to who and what is responsible for the situation. Let us analyze the problem for a moment.

In the life of an automobile there are three great factors. Those who build them (the manufacturers), those who sell them (the dealers) and those who buy and use them. Let's start at the beginning, that is, the manufacturer. Simply told, it is this—he builds the automobile, ships it to the dealers all over the country and receives what? CASH. Nothing else but cash. It was so in the beginning and it is so now. What about the next factor, the dealer? In the beginning he received mostly cash, but as time passed he received less and less cash until finally the proportion of cash received from the sale of a new car was about half of the price—the other 50 per cent consisted of a used car. Now for the third factor, the buyers. In the beginning he paid mostly in cash but his progress was in exact reverse to the dealer—he paid less and less cash because he had a used car to offer as part payment for the new car.

Where is the menace and who is menaced? The menace is the abundant supply of used cars in the hands of the dealer, and the dealer is menaced because he is unable to turn it into cash. The owner who turns his car in as part payment is not much interested in what becomes of it. Why should he? He has got what he wants, SO FAR. The manufacturer who receives cash for the new automobiles as he ships them has not been particularly interested in what becomes of a used car taken as part payment for the manufacturer's new car. He has got his cash, SO FAR. The dealer has got more than he wants SO FAR, so much so that he is beginning to realize that it is not all his problem and that it is impossible for him to carry the burden alone. Suppose all the dealers of the country should refuse to take used cars as part payment for a new car. What would happen? Undoubtedly it would restrict the sale of new cars. Thousands of owners would continue to use the cars they possessed. If such a thing should happen manufacturers would soon have to restrict their product.

Great financial institutions have been organized through which the manufacturer can transfer new cars to dealers upon payment of a small amount down by the dealer and the balance in notes. These institutions are all successful and prosperous, for by the terms which they operate neither the institutions nor the factory assume the slightest risk, as the entire responsibility rests upon the dealer, who pays liberally for the cost of financing.

Manufacturer Gets Cash

This plan simply delivers new cars to the dealers and gives the manufacturers CASH. This kind of financing would be all right for the dealer provided he got cash. This plan of financing would probably be all right provided the manufacturers confined their product to the number of cars that could be SOLD after taking into consideration the number of cars the dealer would take as part payment, that must also be sold, but it will not suffice if, as at present, the manufacturer attempts to use it as a medium of selling ALL THE CARS THEY CAN MANUFACTURE, regardless of the number of used cars thrown on the market through the sale of new cars.

After all is said and done the problem is one of proper production or proper financing, and both seem to be largely of vital importance to the manufacturer. If so, why not look to the manufacturer for the solution of the problem?

Production of new cars which can be sold, based on the proportion of used cars taken as part payment which must also be sold, is a matter for the manufacturer to consider and determine upon, and if it is the determination of the manufacturers as individuals, or as a whole that the used car problem is the result of overproduction let steps be taken to apply the remedy.

If, on the other hand, manufacturers as individual concerns or as a whole should determine that production is on a proper basis, then is there a wonderful opportunity for proper finance by great financial institutions organized at the instigation of the manufacturers; these institutions have only to receive instructions from the manufacturers to advance to the dealer the full value of a used car taken as part payment for the sale of a new car, and for which accommodation the dealer could give the institution proper papers guaranteeing to return to the institution the entire proceeds when the sale is made whether the proceeds are more or less than the amount allowed, and thus is a problem solved.—Automobile Dealers of New Hampshire.

Editor's Note.—The Automobile Dealers of New Hampshire have been publishing in the newspapers of their State a series of advertisements frankly informing the public regarding depreciation of used car values and indicating that used cars offered in trade to New Hampshire dealers will be accepted only at actual market values. The New Hampshire dealers are trying the "mass education" method to combat the public demand for excessive allowances on used cars. The advertising campaign is being employed as a supplement to a maximum allowance plan based on the maximum allowance book of the Boston Used Car Statistical Bureau.

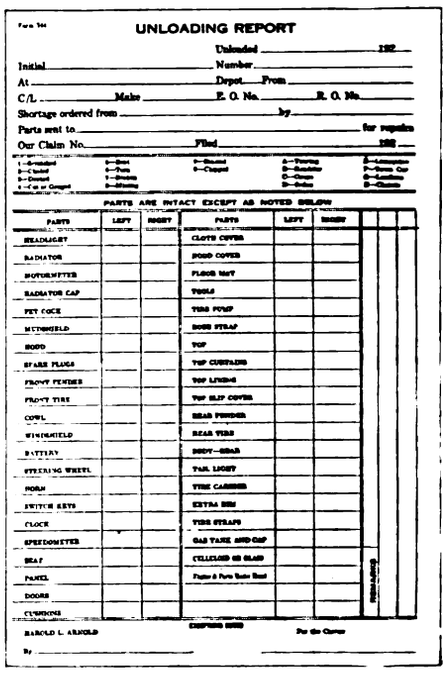
Touring Bulletins on Garages a Good Service

Motorists Have Come to Expect Information and They Appreciate Efforts to Supply It

THE garage has come to be the place where the motorist expects information along with service. He may not spend a cent, but he expects the retort courteous to a hundred and one questions if he cares to ask them.



How to tell the motoring public the things it wants to know with the least loss of time and the least trouble is a growing problem with every garageman. Some solutions are being worked out. The one bit of information they all want is how far it is to this place or that place or some other place. A bulletin board with names of towns in the territory adjacent and distances to them is used by some garages to convey this information, just as the railroads maintain bulletin boards about trains to keep the public from harassing the man at the window with the "one and only" question, "Is the train on time?"

A garage at Decorah, Iowa, has a map of the roads out of Decorah painted on the side of the building. The J. G. Minert garage at Waukon, Iowa, a nearby town, has gone the Decorah concern one better by emblazoning the information about distances and towns across the front of the garage at the top, so that he who drives by may read.

Perhaps there are other methods of giving free information just as good to get motor tourists to stop at the garage and spend some money, but these give the stranger motorist the help he wants, which spells "Service."

Visiting the Trade Helps Jobber Sales Manager

"EVERY sales manager should find time occasionally to get out on the road with his traveling salesmen," says C. E. Ager, sales manager for Thos. J. Northway, Inc., Rochester, N. Y., automotive accessory jobber. "Every salesman gets stale once in a while and needs a 'shot in the arm' to stir him up and to keep him on his toes. New salesmen, too, ought to have a chance to use the sales manager's ability to get them started right. I believe, too, the sales manager cannot keep in touch with changing road conditions, nor can he give his men the right kind of encouragement, unless he himself gets out on the firing line once in a while and finds out through personal contact with the trade just what his men are up against. The trouble is that the average sales manager thinks he is too busy in his office to take the time necessary to get out. However, he should do it, just the same. Whenever I can take a day or two off I do and invariably I find my men do better work for a considerable time following such a trip on my part. Of course, I find myself snowed under with the office work when I get back, but that is no reason why I should neglect my road duty."

REMARKS

HAROLD L. ARNOLD

By .....

Form for Checking in New Cars

An unusually thorough system of "checking in" new automobiles as they are unloaded from the freight cars has been organized by Harold L. Arnold, Hudson and Essex dealer in Los Angeles. Arnold has his own checkers at the yards, and any scratches, dents, cuts, bends, chips or stains or any broken or missing parts, are immediately listed on detection on a specially prepared "unloading report," and promptly called to the attention of the representative of the carrier. The carrier's agent is requested to sign the dealer's report after verification following the inspection of each automobile. With expert checkers on the job, Arnold has reduced his losses from uncollectible damages in transportation to almost nil

A Used Car Ad Suggestion

SMITH'S USED CARS · SMITH MOTOR CO · GIVE SATISFACTION

Why you get a good car when you buy a Smith used car

Our most valuable asset is the good will of our customers. Some of them buy new Leader cars, others buy used cars of one make or another. But they are all our customers and it would be folly to jeopardize their good will by making anything but true representations in selling used cars.

We accept none but good used cars, which have been carefully inspected by our expert appraiser. Before we offer these cars for sale we put them in first class condition. When they are sold they are sold with our guarantee of satisfactory service. Prices are right, too—first class automobiles at second class prices. Come in and convince yourself.

SMITH MOTOR CO.

101 Market Street **Phone Market 750**

Leader Motor Cars

Here is a suggestion for a used car ad that is designed to build public confidence in the dealer. Advertising of this kind is particularly desirable at the present time because it is one of the things that must be done to strengthen public confidence in the used automobile. When a dealer is making an effort to make the used cars he sells dependable he can well afford to sell them on that basis through his advertising. The use of the emblem provides a stamp of dependability and helps hook up the dealer's advertising from insertion to insertion

Two-Inch Messages That Sell Tires

Another Example of the Effectiveness of Small, Timely, Frequently Used Newspaper Ads

TWO-INCH newspaper space every other day is getting fine returns for Wamsley & McClure, operating the Southeast Tire Shop, Kansas City.

The reason for the returns is chiefly in the informal, timely character of the copy in this space.

Attention is attracted by two or three words heavily displayed, touching upon a local event or a happening that is sure to be in the minds of everybody. And then by a thoughtful twist, this subject is made to lead the minds of the readers to the tire service of the company.

For instance, around election day the line said "Go to the Polls"—and this was given the desired turn with the addition, "and cast your vote for Goodyear. They are worthy of your support." The air meet, in which the Kansas City aviation field was dedicated, was snapped up for use. Armistice Day produced a reference to "armistice day for tire troubles." If there is no current event of sufficiently widespread interest to warrant use, a word or phrase is made to enlist attention to one phase of desirability of the company's tire service.

The advertising is something more than merely clever, it is true psychologically. For it establishes a point of contact and then, without "far fetching" of the connection, brings the reader to establish his favor for this company.

The advertising makes the reader think easily up to the subject of tire service. And it makes the reader remember.

A phrase is being used in most of these advertisements that cannot help wakening in almost every motorist a sympathetic smile. It is the phrase, "Invite us to your next blowout."

The advertisements are written largely by one or the other member of the firm, but the solicitor for the daily paper in which the copy is run assists in preparation, and also keeps after the firm to see that fresh stuff is supplied for each insertion.

Each advertising message is fresh, and the public therefore does not tire of reading them all.

Above is shown some samples of the ads that the Southeast Tire Shop, Kansas City, is using effectively. The ads shown here are the actual size used in Kansas City newspapers

The Dollars in Your Bins

IN the bins of your store or garage are many dollars.

The dollars on your shelves are worth just as much to you as the dollars in your cash register or the other dollars you have deposited in the bank. In fact, they need to be watched more carefully. for a dollar in cash is in a form that can be handled easily and protected without much difficulty, but a dollar that is invested in stock can easily get away from you.

Depreciation, theft, failure to charge goods sold, loss by fire and many other causes help to reduce your chances of getting back the money you have paid out for the goods you carry in stock.

Yet these goods represent dollars, and must be turned back into dollars if your business is going to pay.

It is important that the money represented by your stock be watched as closely and protected as carefully as the money you deposit in the bank.

When goods are inventoried only once a year or even less, there are countless opportunities for a part of them to get away unaccounted for. Losses of goods from stock cost many businesses thousands of dollars.

The inventory is an important part of the bookkeeping of a business. But the actual counting of the goods in stock is, by itself, only partly satisfactory, because it shows only what quantity of goods is in stock, and not what ought to be there.

Besides the actual inventory, taken every six or twelve months, or more often if possible, every business should keep up an approximate inventory. This may show either the quantity or the value of the goods on hand and should be figured every day or every week.

The inventory according to the value of the goods in each department is the simplest plan, and for many businesses is sufficiently accurate. This inventory is kept up to date by adding to the inventory figures the purchases of the day or week, and subtracting the sales at cost. The remainder is the value of the stock on hand. The sales and purchases of each day or week during the period between actual inventories should be figured in this way.

The dollars in your bins are important. Watch them.—A. M. Burroughs of the Burroughs Adding Machine Co.

A Schedule of Flat Rates for the Stephens Car

Over Two Hundred Individual and Twenty-Eight Combination Operations Grouped Into Twenty-Four Convenient Divisions with Time Limits for Each Individual and Combination Operation

THE service department of the Stephens Motor Car Co., Inc., has worked out time studies on two hundred and thirty-two individual and twenty-eight combination operations for the Stephens Six. These operations comprise the great bulk of service operations that are ordinarily encountered in service work on this car. The figures have been prepared from time studies covering a sufficient variety of mechanical skill and shop supervision to make them a fair average.

Axle Front—Group A

No.		Hours
1	Install steering knuckle bolt and bushings	5
2	Install tie rod bolts and bushing	2
3	Adjust front wheel bearings	½
4	Install new steering tie rod	¾
5	Line up front wheels	½
6	Install steering knuckle	2
7	Install steering knuckle thrust washer	1
8	Remove and free up knuckle and tie rod bolts	2½
9	Install new axle	5
10	Straighten axle and assemble in car	8
11	Complete overhaul of steering connections at axle	15
	Combination operations 1, 2, 3, 5	6½

Axle, Rear—Group B

1	Install ring gear and pinion	15
2	Take end play out of drive pinion shaft	2
3	Install pinion shaft bearings	5
4	Install pinion shaft	5
5	Install one rear axle shaft bearing	1
6	Install one differential bearing	8
7	Install additional differential bearings	½
8	Install differential case	10
9	Install differential cross and pinions	8
10	Overhaul differential	10
11	Take end play out of axle shaft	1
12	Install rear axle housing	15
13	Install axle shaft	1½
	Combination operations 2, 11	2½

Brakes—Group C

1	Reline service brake (one side)	2
2	Reline emergency brake (one side)	2
3	Reline one service and one emergency brake	3
4	Install set screw in internal band	1
5	Install emergency brake camshaft	2
6	Install emergency brake camshaft bushing	3
7	Adjust service brake	1½
8	Adjust emergency brake	2
	Combination operations 2, 4	2½

Body—Group D

1	Install door bumpers in one door	1
2	Install door hinge on one door	1½
3	Tighten body on frame	1

Carbureter—Group E

1	Install needle valve	1
	Float valve assembly	1
	Float valve	1
2	Install float	½
4	Install carbureter gasket at manifold	1

Chassis—Group F

Including Springs, Snubbers, Etc.

1	Install spring bolts and bushings in front springs	6
2	Install spring bolts and bushings in rear springs	8
3	Tighten all spring shackles	2
4	Install new spring shackle bolts, front	1
5	Install new spring shackle bolts, rear	½
6	Install snubber	8
7	Install front spring	2
8	Install rear spring	3
9	Oil springs	½
10	Graphite springs	6
	Combination operations 7, 3, 9	3½
	Combination operations 8, 3, 9	4½

Clutch—Group G

1	Install clutch facing	6
2	Install clutch throwout bearing	4
3	Reline clutch brake	2
4	Install clutch brake spring	1
5	Install clutch driving disk outer hub	2
6	Install clutch drive shaft	3
7	Install clutch engaging spring	4
8	Install clutch thrust bearing stud	4
9	Install clutch thrust bearing	4
10	Install throwout fork	2
11	Install clutch shaft lever	2
	Combination operations 1, 2	7
	Combination operations 3, 4	2½

Other Flat Rate Schedules

This is the thirteenth flat rate schedule published in Motor World. The previous schedules covered Buick, Cadillac, Chandler, Chevrolet, Dodge, Dort, Hupmobile, Marmon, Oakland, Overland, Paige and Studebaker. Other schedules will be published from time to time as they are worked out.

Cooling System—Group H

1	Install bottom radiator hose	2
2	Install pump outlet hose	1
3	Install water header	2
4	Install water header gasket	2
5	Repack water pump	1
6	Install pump impeller	4
7	Install fan belt	¼
8	Install new bearings in fan	2
9	Install new fan	1
10	Install top radiator hose	½
	Combination operations 1, 2, 10	1½

Dust Pan—Group I

1	Install dust pan assembly	3
2	Install radiator section dust pan	1½

Fenders—Group J

Including Splash Guards and Running Boards

1	Install right or left front fender	3
2	Install right or left rear fender	2
3	Install right or left splash guards	5
4	Recover runningboard, right or left	3½
5	Install new headlight bracket	1

Gasoline and Vacuum Tank—Group K

1	Install gasoline tank	2
2	Install gasoline gage	½
3	Install gasoline line to vacuum tank	½
4	Install vacuum tank float	1

Generator—Group L

1	Install generator	1½
2	Install generator coupling bumpers	1½
3	Install generator couplings	1½
4	Install generator armature	2
5	Install generator brushes	2
6	Install upper generator bearing	2
7	Install lower generator bearing	2
8	Install new relay	1
9	Install new ammeter	1
10	Reface commutator or armature	3
11	Install new battery to ground cable	1½
12	Solder battery to ground cable	1
13	Install new connection on battery cable	1
	Combination operations 1, 2	2
	Combination operations 2, 3	2
	Combination operations 4, 6	2½
	Combination operations 5, 10	4
	Combination operations 6-7	2½
	Combination operations 7-4	2½

Ignition—Group M

1	Install breaker arm with platinum point	1
2	Install adj. screw and platinum point	1
3	Install ignition switch assembly	1
4	Install distributor gears	6
	Combination operations 1, 2	1½

Engine—Group N

1	Burn carbon	2
2	Burn carbon and grind valves	14
3	Install new valve cap	½
4	Install new valve cap gasket	½
5	Install all valve cap gaskets	1
6	Install new push rod and guide	2
7	Install new valve	2
8	Install each individual push rod and guide	½
9	Adjust tappets	1
10	Install new cylinder head	2
11	Install new cylinder head gasket	2
12	Install new piston	5
13	Install each individual piston	1½
14	Install new rings on one piston	3
15	Install new rings on each additional piston	1
16	Install piston pin and bushing	5
17	Install additional pin and bushing	1

Digitized by Google

No.		Hours
18	Install connecting rod	5
19	Install additional connecting rod	1
20	Tighten connecting rods	5
21	Tighten main and connecting rod bearings	12
22	Install gear case cover	5
23	Install camshaft gear	6½
24	Install crankshaft gear	6½
25	Install front camshaft bearing	10
26	Install camshaft	9
27	Change oil in engine	½
28	Install valve spring	2
29	Install additional valve springs	½
30	Install valve guides	3
31	Install additional valve guides	1
32	Install cylinder block	30
33	Install crankshaft	50
34	Install crankshaft bearing rear	60
35	Install front crankshaft bearing	60
36	Install front and rear center crankshaft bearing	60
37	Install crankcase	60
38	Install or refit main bearings	60
39	Install new flywheel	8
40	Take end play out of crankshaft	6
	Combination operations 23, 24	8
	Combination operations 31, 40	6

Muffler—Group O

No.		Hours
1	Install muffler assembly	1½
2	Install muffler front head	1½
3	Install muffler rear head	1½

Oiling System—Group P

No.		Hours
1	Install new pressure gage	¼
2	Install oil pump	2½
3	Overhaul oil pump	3
4	Install oil pump gasket	3
5	Install new distributor pipe	7
6	Clean distributor pipe	7
7	Install new oil throw ring	5
8	Install new oil pan gaskets	2
9	Install new oil gage pressure pipe	½
10	Repair oil float gage	1
11	Clean oil pan strainer	1
12	Install oil pan screen	1
	Combination operations 1, 6	7

Propeller Shaft—Group Q

No.		Hours
1	Install front universal joint bushings	2
2	Install rear universal joint bushings	2
3	Install new universal joint cross	2
4	Install front universal joint yoke	2
5	Install propeller shaft with yoke	2
6	Overhaul front universal joint	2
7	Overhaul rear universal joint	2
8	Overhaul propeller shaft	3
9	Install universal outer casing	1½
10	Install universal inner casing	1½
	Combination operations 1, 2	3½
	Combination operations 3, 4	3½
	Combination operations 6, 7	3½

Starting System—Group R

No.		Hours
1	Install new starter motor brushes	2
2	Install new starter motor armature	2
3	Install starter brushes and reface commutator	3
4	Install new starter motor	1
5	Install new starter chain	½
6	Install new starter clutch pawls	4
7	Install new starter motor sprocket	4
8	Install oversize bolt in starter motor support	6
9	Install new starter switch	½
10	Install new starter clutch	4
11	Repair starter switch	1
12	Install starter gear case cover with bushing	2½
	Combination operations 1, 2	2½

Steering Gear—Group S

No.		Hours
1	Tighten arm on worm gear shaft	1
2	Take excessive end play out of worm gear shaft	1
3	Overhaul steering gear	10
4	Tighten steering gear in frame	¾
5	Tighten steering sector	½
6	Install new steering post	4½
7	Tighten steering wheel on post	1¼
8	Install new steering wheel	1
9	Install throttle shaft	1
10	Install throttle control rod	1
11	Install steering worm gear	4½
12	Install steering worm	4½
	Combination operations 1, 2	1½
	Combination operations 11, 12	6

Tops—Group T

No.		Hours
1	Install top deck and side quarters	6
2	Install glass in rear curtain (one only)	1
3	Install rear curtain	2

Gearset—Group U

No.		Hours
1	Install gearset assembly	5
2	Install gearset case	8
3	Install high and intermediate sliding gear	5
4	Install low and reverse sliding gear	5
5	Install countershaft drive gear	8
6	Install countershaft	8
7	Install countershaft bushings	10
8	Install gearset main drive shaft	5
9	Install front bearing on spline shaft	5
10	Install rear bearing on spline shaft	5
11	Install gear shift rod	2
12	Install main gearset drive pinion	8
13	Install main gearset drive pinion bearings	8
14	Install reverse idler gear	1
15	Install countershaft low gear	9
16	Install gearset hand control base	2
17	Install countershaft interior gear	9
18	Install gear shift fork	2
	Combination operations 3, 4	5
	Combination operations 8, 3	5
	Combination operations 11, 18	2½
	Combination operations 17, 3	5

Wheels—Group V

No.		Hours
1	Install front wheel	1
2	Install front wheel hub	1½
3	Install front wheel outer bearing	1
4	Install front wheel inner bearing	1
5	Install rear wheel	2
6	Install rear wheel hub	2
7	Install rear wheel or axle shaft bearing	2
8	Install new rim	½
9	Install new rim bolt	¼
10	Install new rim bolt nut	¼
11	True up rim	½
12	Grease wheel bearings	2

Windshield—Group W

No.		Hours
1	Install upper frame with glass	1½
2	Install lower frame with glass	1½
3	Install windshield complete	3

Miscellaneous—Group X

No.		Hours
1	Fill all grease and oil cups, universal joints, starter clutch and clutch hub	3½
2	Fill gearset and differential	½
3	Remove all wheels, fill bearings with grease and adjust bearings	1

Can You Use These Sales Letters?

Letter to a Grocer

Diamond Groceries, Inc.,
Newtown, Ohio.

Attention Mr. B. O. Roberts

Dear Mr. Roberts:

Are you satisfied with your delivery service?

Delivery of merchandise to customers' homes is a service you render to get and hold business. This service must be performed so that it is an asset to your business and it is desirable to provide it at as low a cost as is consistent with efficient and satisfactory service.

The Empire Light Delivery Truck fitted with panel body is the right equipment to handle this class of work. Business men who are using this truck find that it makes their delivery service efficient and dependable. Their records show that this truck is economical to operate.

The panel body we furnish with this truck combines utility with beauty. It is an advertisement that a business can be proud of.

Will you give our representative an opportunity to talk over your delivery service with you? We will be glad to have him call at your office at any time that is convenient to you.

Letter to a Coal Dealer

Lehigh Coal Co.,
Newtown, Ohio.

Mr. F. J. Smith, Gen. Mgr.

Dear Mr. Smith:

Your business consists essentially of getting coal into your yard and out again at a profit to yourself and with satisfaction to your customers. The profits you make depend largely on the efficiency of your transportation methods.

Empire Trucks provide economical transportation for coal dealers. We can prove this by the cost record of coal dealers who use them. Any Empire owner will testify as to the reliability of this make of truck. The body equipment recommended to any prospective purchaser is selected only after we have made a careful study of his problems. The body we recommend is the one that will have the greatest usefulness in actual service.

May we send our representative to study your transportation problems? It will place you under no obligation. We feel confident that he could make some suggestions that would reduce your transportation costs and improve your service.

A Headlamp Adjusting Letter

Do your headlamps give you enough light on the road?

Or are they blinding other drivers and pedestrians?

Eight out of ten headlamps are not correctly adjusted to give the best driving light on the road, where it belongs. Due to faulty adjustment in the first place or to the bending of lamp brackets through accident, many lamp beams cross each other, both go off to one side or one or both point up in the air.

For a flat charge of one dollar we will test and adjust your headlamps so that they will give you from two to five times as much light on the road and prevent a blinding glare, which may lead to unpleasant contact with police officers or liability damages for accidents. This is a small insurance premium to pay for such a great benefit.

Headlamps get out of adjustment easily. You should have a test made every two months at least. It takes only a few minutes. And you will be glad you came.

This Storage Receipt Protects Garageman

Form of This Type Makes Specific Notations Possible Thereby Preventing Fraudulent Claims

Editor Motor World:—We run for the winter months from September to May 31, a winter dead storage rate on automobiles. I would like to have a legal form of receipt or contract that we could give to the party whose car we take in for storage, assuming no responsibility in respect to the running condition of the car. Any help in this matter will be greatly appreciated. Edgemere Garage & Sales Co., Inc., Edgemere, N. Y.

Answer:—When cars are accepted on dead storage it is important for the person receiving them to specify just what has been received so no fraudulent claims can be successfully made thereafter. The following form of receipt should serve in all ordinary cases. The condition of the upholstery, etc., if in poor condition when received should be stated. A clause may be added if desired to cover freedom from liability for defective running condition, etc.

No claim for shortage on this receipt will be recognized after 4 days from receipt of goods in warehouse.

This storage receipt is not negotiable.

Goods are not insured unless so ordered by owner.

Not responsible for moths or checking of panels, but every precaution will be taken to prevent them.

Responsibility of the undersigned for any piece or package enumerated in schedule including contents of same is in any event limited to the sum of $50 unless the value thereof is made known at the time of storing and receipted for on the storage receipt. An additional charge will be made for a higher valuation.

WILLIAM C. JONES.

Damages for Loss of Use of Car

That damages for the loss of use of a motor car, based on the fair and reasonable rental value of the car for the number of days it could not be used because it was injured in a collision, cannot be allowed when there is no evidence that such amount has been paid by the owner or that any sum was paid for the use of another car during such time, was the decision of the court in the New York case of Zerman vs. Misroch, reported in 192 New York Supplement, pg. 881.

Village Right to Restrict Curb Filling Stations

In the recently decided Massachusetts case of North Adams vs. Wertz, it was held by the court that a village has a right to restrict the installation of a curb gasoline filling station, even though it may be shown that the property on which the station was to be erected had for a long time been used as a hotel, and it had been a steady custom for years to put chairs out on the sidewalk for the guests.—188 N. W. 527.

Practical Questions of

Business Law

Are discussed every week on this page

Maximum-Minimum Time Estimates for Electrical Repairs

Schedules Cover Equipment of Nine Makers of Starting-Lighting Systems and All Types of Ignition

THE application of a flat rate schedule to electrical service is complicated by certain fundamental characteristics of this business. First, there is the large number of makes and models of equipment. Second, the accessibility of the electrical equipment varies widely with the make of car. Furthermore, it is frequently impossible to determine the nature and extent of the trouble without a bench test or a disassembly of the unit.

Some of the advantages of a flat rate have been obtained by Barter-Oppenheim, Inc., electrical service station dealer in Newark, N. J., through the development of maximum-minimum time estimate schedules. These schedules cover bench repairs only. Time spent in removing and installing units is charged on an hourly basis.

This dealer guarantees all his repair work to be equal to factory specifications. For his own protection, he accepts all work with the understanding that a complete repair will be made. Whether the charge is the minimum, the maximum, or some intermediate amount depends on the scope of the repairs that are found to be necessary on the disassembly and test of the unit.

Lengthening the Life of Ford Transmission Lining

PROBABLY no one feature of the Ford is "cussed and discussed" quite as much as the transmission lining problem. The fact that this important item requires frequent replacement, and that the necessity usually arises at the most inopportune time, is the argument invariably used against it.

Experience proves that the "Fording" public needs a lot of education in the proper care and use of the transmission. We have all known drivers who seemed to be able to make a set of linings last indefinitely, and also those with whom they seemed to vanish like the proverbial "June frost." There is no reason why a set of any of the high grade linings now on the market should not last at least 5000 miles under average driving conditions.

To begin with nearly all bands are set too tight when they are first installed. This is done to obviate the necessity of an early adjustment as they will always loosen up considerably when breaking in.

A new band is very prone to burn before the oil has a chance to penetrate the fibre, and a band once glazed over has no further chance for lubrication.

A new set of lining should be carefully fitted to a transmission drum before installing in the car and should be bent to a true circle. Take special care that the ends are not bent inward as the bands, on contraction, strike the drum at this point first.

The original adjustment should be just tight enough to be serviceable, and will require tightening after a few miles running. Never set the bands so close that they are not perfectly free on the drums when worked back and forth by hand. Nothing is gained by a tight adjustment as the lining will wear to a definite clearance anyway.

Bear in mind that there is no wear whatever on the low or reverse lining when that gear is engaged. When running on low gear with the pedal properly depressed, the drum does not revolve. Allowing the low to slip, is what wears out the lining prematurely. Hold the pedal down with a firm steady pressure and do not allow the band to become so loose that the pedal touches the floor board.—H. V. D. Sweet.

Better Mechanics

ARTICLE No. 267

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

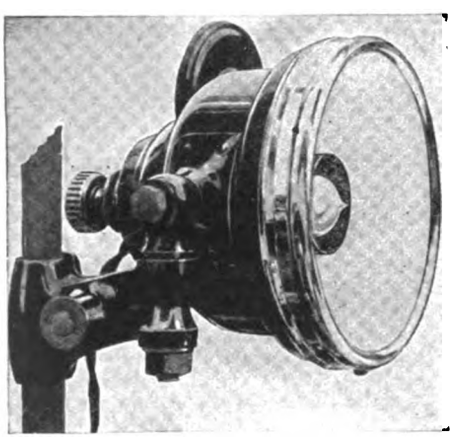
A. E. A. Exhibit Shows Trend Toward Better Tools and Accessories

Chicago Show Introduces Many New Items of Automotive Equipment—Better Packing a Merchandising Aid



ON this and the following pages will be found brief descriptions and illustrations of half a hundred new pieces of automotive equipment, parts and shop equipment which were on exhibition at the Coliseum during the convention of the Automotive Equipment Association.

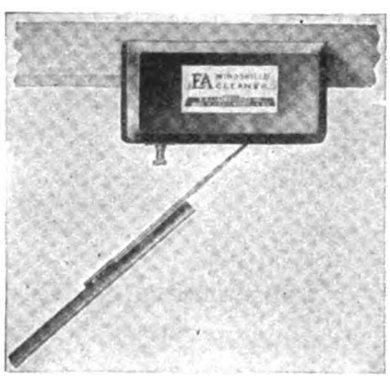
In the field of shop equipment there is a noticeable trend toward better tools and new tools designed to turn previous hand operations into machine operations, thus saving both time and money. The equipment that is for resale presents many improvements, all tending toward more utility to the user. This class of goods is also featured by better packing, individual cartons and more systematic packing of cartons in cases for shipping. The wider use of the individual carton is of great benefit to the retail dealer in handling.

Wakefield Combined Spot Light and Warning Signal

F. W. Wakefield Brass Co., Vermillion, Ohio.

The general appearance of the spotlight is conventional but it has a cylindrical sleeve of red glass which can be pushed forward by operating a thumb lever so that the red glass surrounds the bulb. By placing the glass in the position the spotlight becomes a warning signal as occasion requires.

Lempco Axles and Driveshafts

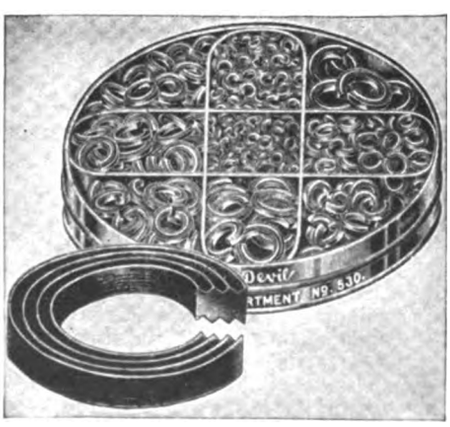


Lake Erie Metal Products Co., Cleveland, Ohio.

The axles and driveshafts are made in sizes for practically all passenger cars. A display rack which holds nine shafts is furnished to dealers stocking the axles. The axles are made of heat treated open hearth steel, which is machine straightened after rolling. The carbon content is 40-50, manganese 60-80 and sulphur, silicon and phosphorus not exceeding .005.

Circle S Automatic Windshield Cleaner

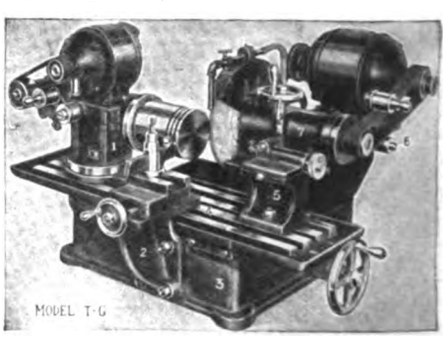
F. M. Stewart Mfg. Corp., Chicago



This automatic windshield cleaner is vacuum operated and an inside adjustment is incorporated in the design. The motion of the squeegee is supplied by a vacuum operated oscillating mechanism inclosed in the enameled case. The actuating unit has few metal parts. A double rubber bellows is caused to expand and contract, thus supplying the intermittent forward and backward motion to the squeegee.

Corcoran Red Devil Lock Washer

Smith & Hemenway, Inc., Irvington, N. J. Price $7.70 for assortment of 530.



A new pattern lock washer has upon each face three concentric grooves which form three sharp ridges. The washers are put up in 100 to 1000 size packages and are also furnished in assortments of 530 consisting of nine sizes. These are packed in metal boxes with tight covers.

Franklin Model TG Multi-Purpose Tool

Franklin Machine & Tool Co., Springfield, Mass.

This firm has been marketing a multi-purpose tool designed especially for refacing valves, cleaning carbon and sharpening small hand and machine reamers. To meet the demands for a tool having a wider range of application, a new machine has been brought out which is designated model "T G." The model "T G" will accomplish the tasks of the former and smaller model, in addition to which it functions as turning lathe and piston grinder. The work head of the machine receives its power for rotation from a ¼-hp. motor which is belt connected to the work head spindle. A wet grinding attachment is part of the machine and provision is made to provide continuous circulation of the cutting fluid. The wheel head of the machine receives its drive from a ½-hp. motor mounted on a cross slide. A head feed wheel graduated in thousandths controls the feed of the 10-in. grinding wheel. The table is mounted on dovetailed slides fitted with gib for adjustments. A hand wheel is fitted for control of the feed screw. The tail stock is adjustable to accommodate for taper turning and grinding.

Presto Radiator Heater

Metal Specialties Mfg. Co., Chicago

Considerable improvement has been made in the design of the Presto automobile engine and radiator heater. This is an electrical heater of a portable type to be hung in a small garage or under the hood of a car. A single heating coil is now used instead of the double coil formerly used, and the price has been reduced from $5 to $3.50.

NEW AUTOMOTIVE EQUIPMENT AT THE A. E. A. SHOW

Marquette Fender Brace

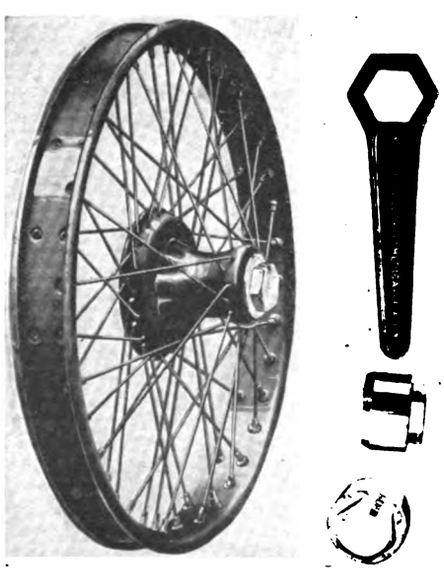
Marquette Mfg. Co., St. Paul, Minn.

Price $4.75

A new addition to the Marquette line is the fender brace. It is of angle iron construction and has its anchorage at the wooden sill of the body. The company is also making shock absorbers of the modified cantilever type which utilize Ford standard bushings at all journaling points. The price per set of four is $17.

Straightline Fan Belt

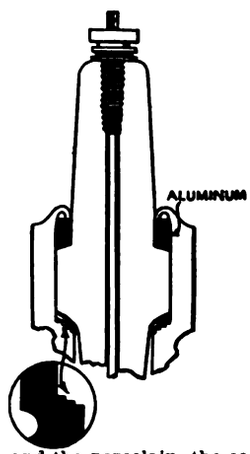
Rossendale-Reddaway Belting & Hose Co., Newark, N. J.



Price 50 cents for Ford sizes.

The belts are made of canvas turned in and machine stitched lengthwise. They are treated with a preparation to resist the action of oil. Made for all models of cars and trucks. Each belt is packed in an individual box, ten boxes to a carton.

New Type House Wire Wheel

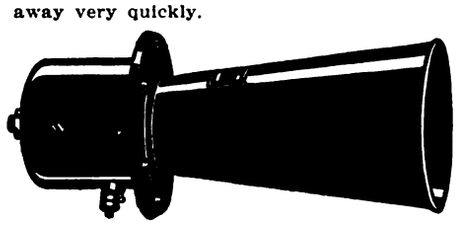


Wire Wheel Corp. of America, Buffalo, N. Y.

A new type House wire wheel bears the model number 3 and has a distinctive hexagonal hub cap. This cap is heavier and provides greater bearing surface for the wrench and permits greater leverage on the wrench when the wheel is being put on or removed. The hub caps are stamped left and right and have arrows indicating the direction to turn for off or on. The wheels are supplied in sets of five with a carrier for the extra wheel, four inner hubs, four hub caps, hub cap wrench and a spoke nipple wrench.

Improved Bosch Spark Plug

American Bosch Magneto Corp., New York City.



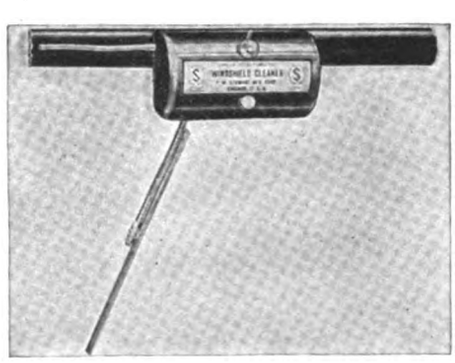
Several changes have been made in the construction of the Bosch spark plug. Instead of crimping the steel shell directly upon the porcelain as heretofore, there is a deep aluminum washer inserted to separate the two parts. The idea of this washer is to compensate for unequal expansion between the steel and the porcelain, the coefficient of expansion of the aluminum being correct to make the compensation. It is claimed that this prevents undue stresses and prevents any tendency to crack the porcelain or loosen it. A new type of asbestos washer is used at the bottom. A toothed seat holds this washer in place.

Klaxon Model 8 Horn

Klaxon Co., Newark, N. J.

Price $7.50

The new Klaxon model has the motor armature carried in ball bearings. This enables the horn to get up speed very quickly and, therefore, the horn responds instantly to the pressure of the button. The initial discharge on the battery is considerably lower, due to the fact that the motor gets away very quickly.

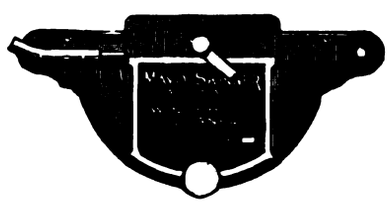


E. A. Electric Windshield Cleaner

E. A. Laboratories, Brooklyn, N. Y.

Price $5.50.

The automatic windshield cleaner is operated by a small electric motor with a 40 to 1 gear reduction. The current drawn is 2.75 amperes at 6 volts and the device is said to exert a force of 13½ lb. at the center of the moving arm. The control is by means of a switch on the dash.



Mayo-Skinner Automatic Windshield Cleaner

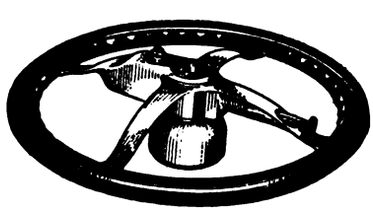
Mayo-Skinner Mfg. Co., Chicago

Price $5

A new model of windshield cleaner has been developed. The new cleaner incorporates many of the features of the previous standard model, but is of smaller overall dimensions. As with the larger style put out by this concern, the new model is vacuum operated through connection with the engine manifold. Better production methods have made possible a lower price on the new model.

Green Pyralin Visor

Metal Specialties Mfg. Co., Chicago



Price $7.25

The visor is made of green pyralin 1/32 in. thick. It has a double curve and is adjustable as to angle. One width fits all cars either open or closed. The edges of the pyralin are metal bound, so that there is no possibility of the transparent material being bent or broken.

Spencer Locking-Tilting Steering Wheel

Spencer Mfg. Co., Spencer, Ohio.

A combination wheel lock and tilting steering wheel. The working parts are inclosed in a hardened steel forging to prevent tampering. The wheel spider is a heavy die casting of aluminum and is hinged in such a manner that the lock may be operated while the wheel is either tilted or in the down position. Made for Ford, Dodge, Chevrolet, Overland, Maxwell, Star and Gray cars. Packed in individual cartons, ten to a case.

Model for Ford Cars

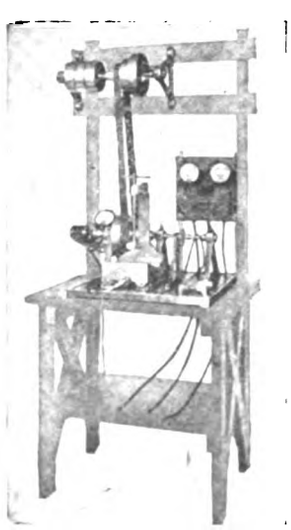
Digitized by Google

NEW AUTOMOTIVE EQUIPMENT AT THE A. E. A. SHOW

Marquette Rim Tool

Marquette Mfg. Co., St. Paul, Minn.

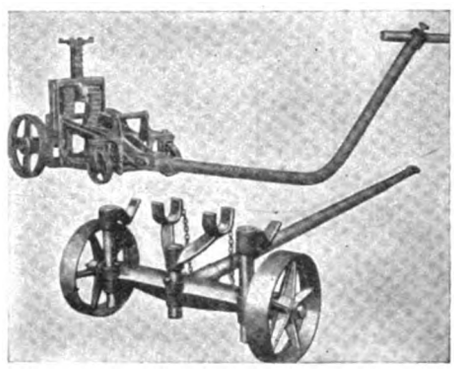
Price $30



This is an all-metal universal rim tool. The forward arm is pivoted so as to swing to the right, thus coiling the rim into a smaller circle instead of pushing the end in. It is also pivoted to swing straight up out of the way when the rim is being placed or removed from the table. The threaded spindle is 1⅛ in. in diameter with square threads. Weight complete is 120 lbs.

Weidenhoff "Add-a-Unit" Electric Test Equipment

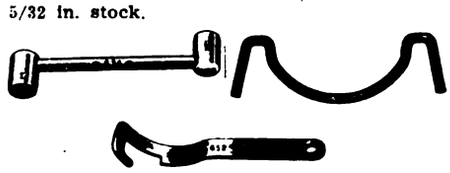
Joseph Weidenhoff Co., Chicago



The "Add-a-Unit" is built on the principle of the sectional bookcase. It is so designed that, as the requirements of a small service station develop and more elaborate is needed, standard units may be added until the stand is ultimately brought up to the requirements of the particular establishment. The assembly as shown is for use where power is taken from a line shaft. The countershaft is fitted with tight and loose pulleys, provision being made for a crossed belt to give right and left rotation: Power is delivered to the generator under test by direct chain drive from the jack shaft. Tachometer, instrument panel, adjustable spark gap, and spark coil testing device are optional, and may be added as required.

National Standard Towing Truck

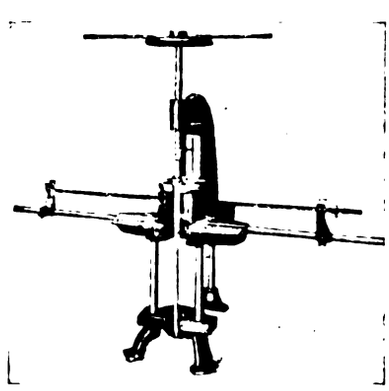
National Standard Co., Niles, Mich.



A new towing truck is furnished with either plain or rubber tired wheels and weight 215 lb. A collapsible tongue is furnished which has a range of extension of from 7 ft. 3 in. to 12 ft.

New Mossberg Wrenches

Frank Mossberg Co., Attleboro, Mass.

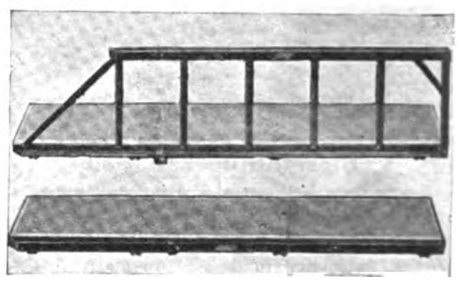


Many new models of wrenches have been added to the line, three of which are illustrated. The spring perch wrench No. 634 is designed to facilitate the installation of shock absorbers on the Ford car or any work that requires the removal of the spring perch nuts. Tool No. 649 is a new addition to the Mossberg line and is designed to remove stubborn headlight rims of the Ford headlamp. Tool No. 652 is designed exclusively to assist the operations on the Ford universal joint assembly. The wrench is of 5/32 in. stock.

Canedy-Otto Model 3½ Press

Canedy-Otto Mfg. Co., Chicago Heights, Ill.

This is a combination arbor and straightening press. The pressure screw is of carbon steel with a No. 6 Acme thread, and will produce 30-ton pressure. The capacity is 6 ft. between centers. A feature of the device is the combination centers, which are slidable and which carry vee blocks to accommodate a shaft which is to be straightened from the datum point supplied by the shaft journal. The maximum distance between centers is 72 in. and the weight 645 lb.



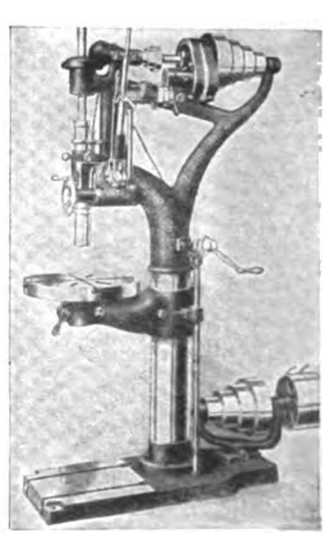
Griprack Luggage Carrier

Milwaukee Motor Products Co., Inc., Milwaukee, Wis.

Prices $5, $6 and $7, according to style

This is an all-steel device which attaches to the edge of the runningboard and when in the extended position it makes a guard for holding suitcases or other luggage. It is self-inclosed, dust tight and is provided with slots for straps. Style A for Ford, Chevrolet and Dodge cars is 44 in. long and sells for $5. Style B for Studebaker, Buick, Nash and similar cars is 56 in. long and sells for $6. Style C for Hudson, Cadillac, Marmon and other large cars is 69 in. long and sells for $7. The device is enameled black, the finish being baked on.

Thermoid Brake Lining Machine



Thermoid Rubber Co., Trenton, N. J.

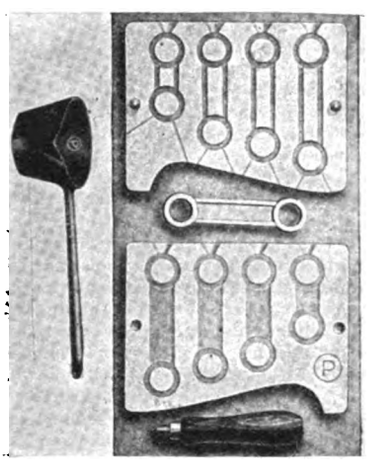
The machine punches holes in the lining and, by the substitution of a different tool, drives the split tubular rivets home with the heads below the lining surface, giving the same effect as countersinking.

Canedy-Otto 21-in. Upright Drill

Canedy-Otto Mfg. Co., Chicago Heights, Ill.

The drill has a diameter capacity of 0 to 1½ in., and will drill to the center of a 21⅛-in. circle. It is equipped with 4 step cone pulleys of 2⅞-in. face. Can be furnished with plain lever feed, wheel and lever feed and a combination of the two. A back gear or power feed are furnished on request. The horsepower required is 1½ and the weight approximately 700 lbs.

Digitized by Google

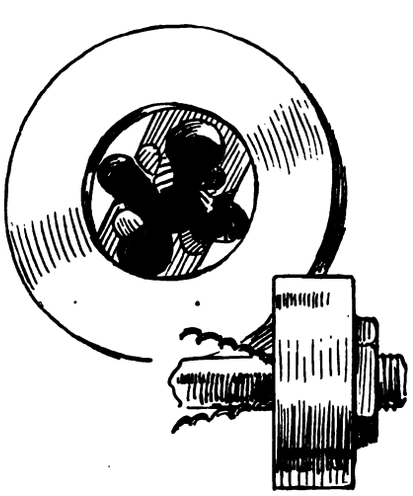


NEW AUTOMOTIVE EQUIPMENT AT THE A. E. A. SHOW

Ohio Pattern "O-P" Speed Ladle

Ohio Pattern Wks. & Foundry Co., Cincinnati, Ohio

Price $1.20



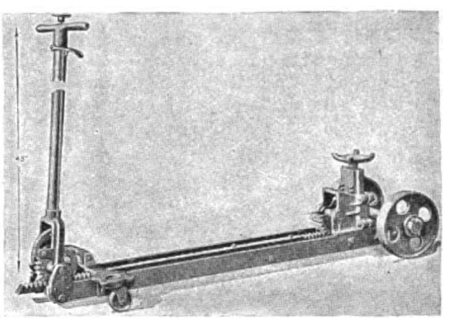
The "O-P" speed ladle is used in battery work. The bowl is 3 in. in diameter. Various molds for casting the pillar cups, straps, and cell connectors are also made. Most popular of these molds is the screw mold, which enables the battery man to make his own lead-headed terminal screws.

Self-Cleaning Die

Conont L. Donelson Co., Conway, Mass.

A new type of threading die which has a little scoop shaped recess on the side of each cutting projection, this giving the die the self-cleaning feature. Each die is made in two sections which are interchangeable and which will feed equally well from either end. Made in all standard sizes.

Buckeye Bronze Backed Bushings



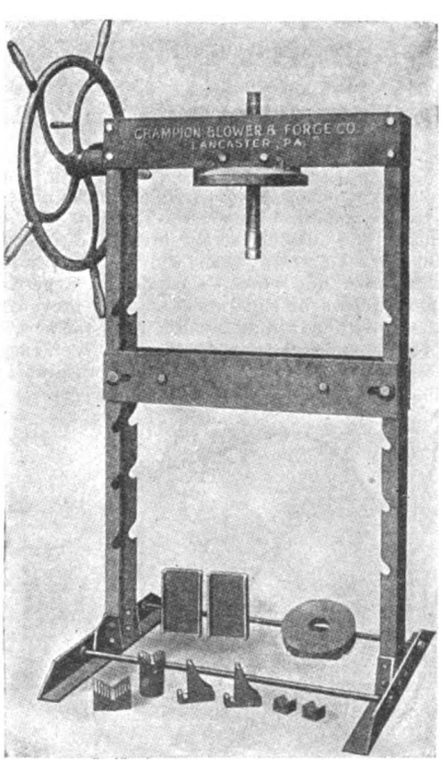
Buckeye Brass & Mfg. Co., Cleveland

Replacement bronze and bronze back babbitt bushings are being made. The centrifugal process of deposing babbitt being utilized on the bronze backed bushings. Miscellaneous and spring eye bushings are featured, and for the guidance of the purchaser a specification booklet has been prepared. Data pertaining to the dimensions of piston pin, steering arm, king bolt, and tie rod bushings are included in this booklet.

Manley Quick Acting Jack

Manley Mfg. Co., York, Pa.

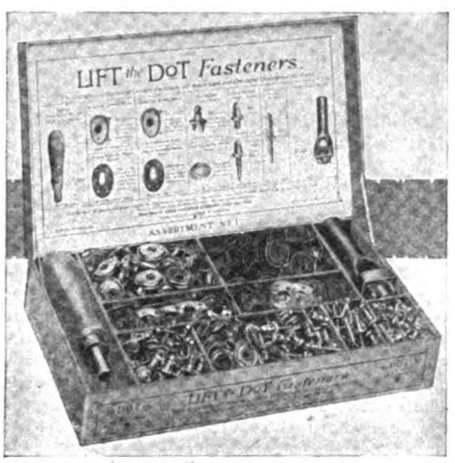
The jack is for lifting either the front or rear end of a car or truck. The slack is instantly taken up without working the handle and the operating lever is so designed that it can be worked either in a vertical or horizontal position. Thirty degrees of motion is sufficient to work from one ratchet tooth to the next so that there are three consecutive positions between the horizontal and vertical planes.



Champion 30-Ton Garage Press

Champion Blower & Forge Co., Lancaster, Pa.

Price $80

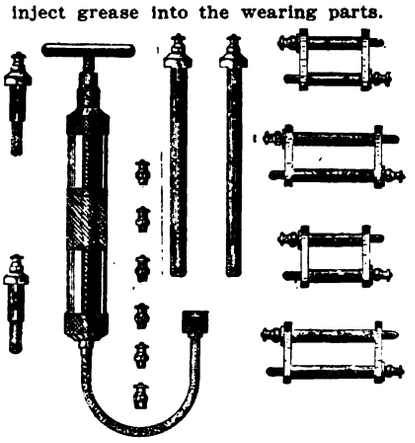


This garage and service station press has leverage whereby 100 lbs. exerted on the hand wheel develops 75 tons pressure on the screw. The hand wheel is geared three to one with heavy inclosed bevel gears operat- a 2-in., 4-pitch acme thread screw. The hand wheel, weighing 57 lbs., is used as a flywheel to run the spindle up and down quickly. The table can be raised or lowered by one man. The uprights are 5-in. channels, with cross bars 6 in. wide by ⅝ in. thick. The width between uprights is 32 in. and the up and down travel of the spindle 9 in. It occupies a floor space 36 by 39 in. and the weight is 485 lbs.

Lift-the-Dot Fastener Assortment

Carr Fastener Co., Cambridge, Mass.

Lift-the-Dot, Common Sense and Durable Dot fasteners are now being put up in attractive box assortments, each box containing all the different patterns together with the necessary tools for attaching them. Besides the large boxes there are also small assortments for retail sale to be used by car owners. Refill packages are furnished to renew stock in the compartments of the large packages as they become exhausted.



Rose Chassis Lubricating System for Fords

Frank Rose Mfg. Co., Hastings, Neb.

Price $8.64.

The system consists of special spring shackles, tie rod bolts, spindle bolts and the necessary fittings so that a force grease pump may be connected to any of the fittings to inject grease into the wearing parts.

Genasco Oil and Greases

Barber Asphalt Co., Madison, Ill.

This firm has supplied quantities of its products to the paint and allied industries and has recently perfected a method of distilling a solid hydrocarbon. The solid hydrocarbon appears in a semi-crystal form, the base of which is paraffine. It is claimed by the manufacturer that the distillation process insures uniformity of the product which is now being offered in oils and greases bearing the trade name of "Genasco."

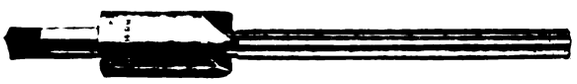
NEW AUTOMOTIVE EQUIPMENT AT THE A. E. A. SHOW

Alvord Combination Reamer and Facing Tool



Alvord Reamer & Tool Co., Millersburg, Pa.

A new combination reamer and facing tool, for reaming the spindle body bushings of the Ford car, and at the same time facing these bushings so that the spindle body will accurately fit between the front axle trunnions.

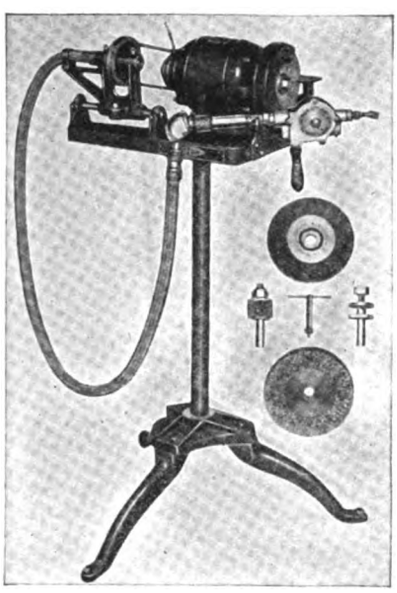
Alvord Pilot Reamer for Ford Spindle Bushings

Alvord Reamer & Tool Co., Millersburg, Pa.

A pilot reamer of expansion type, for reaming Ford spindle bolt bearings in alignment. The expansion feature compensates for wear, and permits of accurate work with bolts which vary slightly in size.

Pyrene Adds Phomene and Guardene Extinguishers

Pyrene Mfg. Co., Newark, N. J.

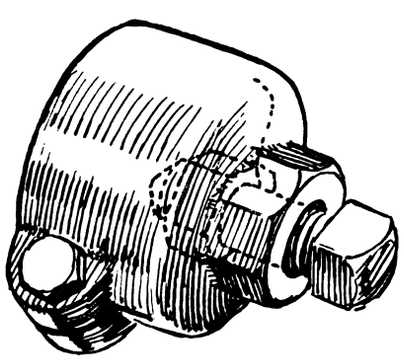


Two additions have been made to the line of fire extinguishing apparatus marketed by the Pyrene Mfg. Co. The carbon tetrachloride type is still manufactured and is featured in the small hand sizes of extinguishers. The new products are called phomene and guardene. The former is being marketed in the 2½-gal. container, which is the standard wall size. Guardene is the Pyrene Co.'s name for their acid and water type of equipment, which externally has the appearance of the conventional extinguisher of this type. The method of discharging the contents is unique and it is claimed that the tank can be charged after usage in less than five minutes. Both the phomene and guardene extinguishers are recommended for service where the duties are not as heavy as would necessitate the use of a liquid carbon extinguisher such as the pyrene. Neither of the devices mentioned are for use where they may be subjected to freezing temperatures.

Sioux Flexible Shaft and Attachments

Albertson & Co., Sioux City, Iowa.

This machine can be used for a wide variety of work in the automotive maintenance station or repair shop, machine shops, etc. It consists essentially of an alternating-current ¼-hp. motor, stand, flexible shaft with universal joint and single control, three-speed drive pulley and belt, one 6-in. emery wheel and one 4-in. emery wheel and arbor, a 4-in. wire brush and arbor, one ¼-in. capacity Jacobs chuck, including arbor, and the shaft is bent or curved during use it does not at any time come into contact with the housing. The shaft itself is music wire, the first winding is of small wire and is followed by larger sizes. Each wire is wound in the opposite direction.

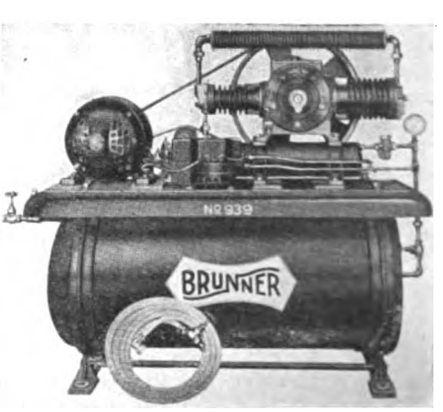


Le Compte Wheel Puller for Fords

The Le Compte Co., Newark, N. J.

Price $1

The casing of the puller is of conventional type, clamping around the threads of the hub. The driving screw instead of being threaded directly into the casing, goes through a nut which is carried in a hexagonal recess inside the case. This prevents the nut from turning but allows of the screw being pounded with a hammer, in which case the hammer below is communicated directly to the shaft and not to the casing.



Three New Brunner Compressors

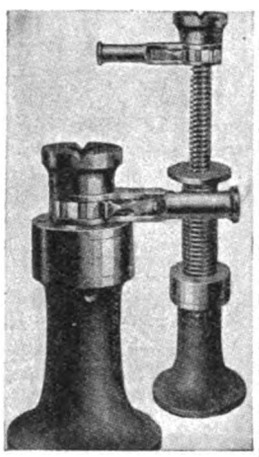
Brunner Mfg. Co., Utica, N. Y.

Several models of the Brunner air compressors have undergone slight modifications, but three brand new types, models 932, 939 and 965, have been added to the line. The model 932 has been brought out to meet the needs of the majority of dealers who require air service. It is not sufficiently large for the shop which uses pneumatic tools, nor for the oil station which operates its pumps by air pressure. It is self-operating, having an unloader which maintains the desired tank pressure and at the same time relieves the motor of the starting load. All pipe fittings are of brass and the general features of the outfit follow the usual Brunner construction. The price on this outfit ranges from $325 to $340, depending on the motor equipment.

The model 939 is the fastest working ¾-hp. unit built by the company. Pressure in the 32-gal. tank rises from 0 to 175 lbs. in less than 25 min. This efficiency is said to be obtained by the dual valves, larger intercooler and snugly fitted, polished pistons. This outfit ranges in price from $370 to $394.

Model 965 is a heavy-duty assembled unit and has ample capacity, it is stated, to meet the needs of the largest and busiest filling stations. The assembly is very compact. The top of the compressor is 48½ in. from the floor and the outfit is 65 in. long, with a width of 22 in. The weight, 775 lbs., is too great for overhead location. The price range is from $530 to $580.

Manley Engine and Axle Stand for Dodge



Manley Mfg. Co., York, Pa.

The stand, in addition to handling the engine and the axle of the Dodge car will also handle the gearset. The device will handle any of these units separately.

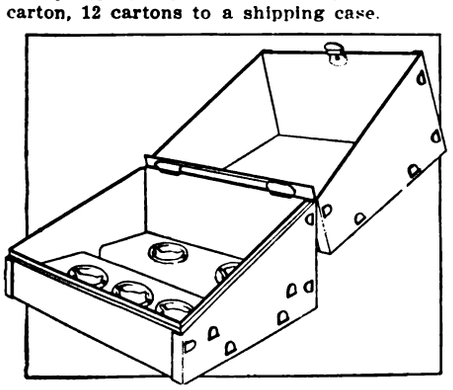
NEW AUTOMOTIVE EQUIPMENT AT THE A.E.A. SHOW

Hart-Bell Truck Jacks, Models 10 and 15

Hart-Bell Mfg. Co. Poughkeepsie, N. Y.

Price $20.



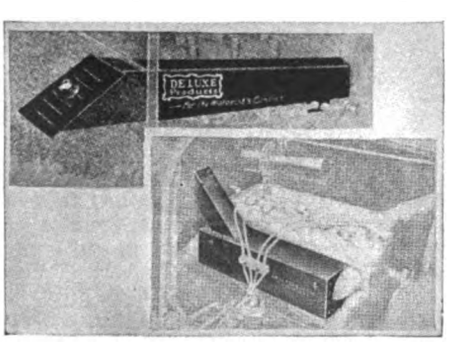
Two new truck jack models have been added to the Hart - Bell line. Model 10 is a 10 ton model which is 11½ in. high and has a raise of 10 in. Model 15 is the same as model 10 except that it is geared down to give it a capacity of 15 tons. Both models are the same price. The price of model 5 has been reduced from $13 to $10 and a new touring car jack is being turned out to sell for $8.

Dover Bulb Box

Dover Stamping & Mfg. Co., Cambridge, Mass.

Price $1.00.

The bulb box holds five bulbs and is made of steel. It opens with a spring latch and the bulbs are held in place by springs in very much the same way they are held in place in the bayonet socket. The box is 3⅞ by 3⅛ by 3⅞. Each box is packed in a carton, 12 cartons to a shipping case.

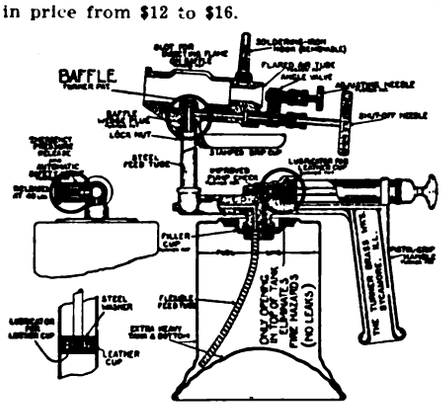


Arvin Heater De Luxe for Fords

Indianapolis Pump & Tube Co., 1020 Drover St., Indianapolis, Ind.

Price $1.75

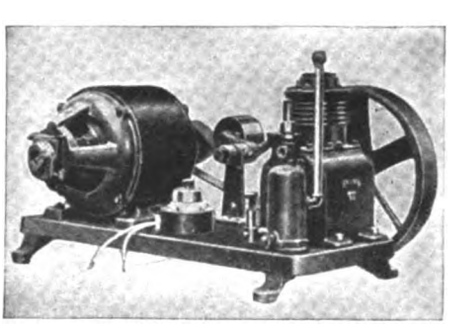
A new model of the Arvin DeLuxe heater has a rectangular damper and the design is changed in many respects. The device consists of a one-piece jacket that clasps snugly over the exhaust manifold and brings the heat back to the driving department.



Turner "Master Series" Blow Torch

Turner Brass Wks., Sycamore, Ill.

Prices $12 to $16



The most recent additions to the Turner line is known as the "Master Series" blow torch. A sectional view of the construction is shown. The tank is filled from the top by removal of the burner mechanism assembly. Additional features are the safety valve, which prevents an excess of pressure forming in the tank, and the hot spot or preheater, which enables the torch to operate on either gasoline or kerosene. The pistol grip handle carries the pump mechanism. The "Master" line of torches is being manufactured in several different models, ranging in price from $12 to $16.

Kellogg Type EM52Y Air Compressor

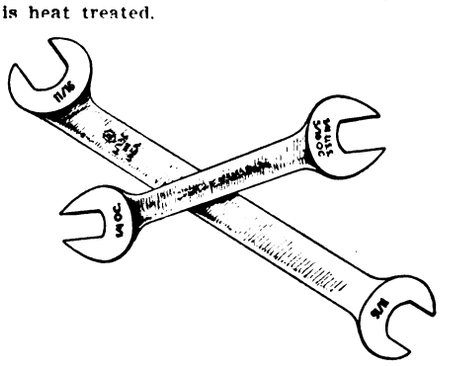
Kellogg Mfg. Co., Rochester, N. Y.

This air compressor is intended especially for gasoline filling stations because of the lower initial cost and reduced operating expense. It is furnished without tank and the pump is in operation only when inflating a tire. A telephone switch at the service point starts and stops the motor and the switch is opened only when the hose is removed. From one to four air lines can be used. It has approximately the same tire filling speed as a tank outfit, the makers state. The compressor has a 1-hp. motor and the pump is a two-cylinder, 2¼-in. bore and 2-in. stroke, with an air displacement of 4½ cu. ft. per min. It is equipped with the switch, belt tightener, fan blades on pulley to cool pump fins, 30-ft. hose and all necessary parts. The whole outfit is mounted on a neat base. The telephone switch must, of course, be mounted at the point where the tires are inflated.

Manley Garage Light

Manley Mfg. Co., York, Pa.

A light for garage and shop use. It is adjustable to any height for use in working under the car, over the car or at the side. It has a connection socket to which can be attached an electric drill or other piece of electrical equipment operated by lighting current.

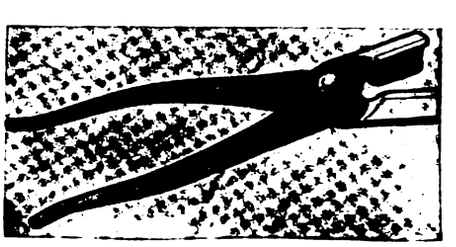


Bonney Chrome Vanadium Tappet Wrenches

Bonney Forge & Tool Wks., Allentown, Pa.

Price $1.10 to $1.20.

The wrenches are made in five sizes with openings of ⅛, 17/32, 9/16, ⅝ and 11/16. They are made very thin, being 5/32 in. thick at the head for the first three sizes and 3/16 for the last two. They are made of chrome vanadium steel to provide extra strength to offset the thinness of the wrench. The steel is heat treated.



Bonney Battery and Grease Cup Pliers

Bonney Vise & Tool Works, Inc., Allentown, Pa.

Price $1.50

The pliers are designed to grip battery posts and terminals and to operate grease cups from any angle. The teeth are cross-milled in double concave jaws. The same sliding rivet pivot that is used in ordinary pliers allows a considerable range of sizes to be handled. Length 9 in., weight 8½ lbs. a dozen.

Repairshop Shortcuts

Quick Service

DID you ever bolt down your supper, go without your dessert, forget to kiss your wife good bye and dash madly down to the doctor's office only to find twenty patients ahead of you and then kill two hours reading last year's magazines? Well, the way you feel is the way the car owner feels when he wants to get a little job done and finds that he will have to wait a long time or leave the car over night. There are a lot of little jobs of brake adjustment, carbureter adjustment and fixing up snivvys that can be done in a very few minutes and if there is a man available for this quick service the income can be made very attractive. Many dealers have quick service departments for this kind of business.

No. 3454—Straps for Oxygen Tanks—Oxygen tanks are strapped to the wall with leather belts and buckles to prevent their being upset with consequent damage to the gages, etc.—W. B. Wheatley, Brooklyn, N. Y.

No. 3455—Testing Contact Points—To prove that contact points are well fastened to the breaker arm and screw, short circuit the coil and resistance with small iron wire about 18 in. long and close the points. Heat at the points shows a resistance.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3456—Timing a Dodge Engine—Dodge cars not having marked flywheels, the position of the crank can be ascertained by cranking the engine until the No. 4 exhaust valve just seats. This is the proper setting for the spark to start breaking on retard.—Hayes Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3457—Portable Oil Pan—A portable oil pan is made with a heavy wood boxing lined with tin and mounted on casters. A wire is used to pull it into position. — Hayes Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3458—Tightening Cylinder Head Bolts—Best results are obtained by tightening the center stud nut first and working toward the sides and ends from this center. This squeezes the gasket outward and brings the head down uniformly. — Hayes Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3459—Removing Broken Speedometer Gear on Buick—A broken gear on a Buick speedometer in the gearset is removed by winding some wire around a screw driver to make an electro magnet. The end of the screw driver is then inserted in the speedometer connection hole and the parts of the broken gear withdrawn.—Hayes D. Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3460—Rear Axle Nut Wrench—A rear axle nut wrench is made from an old axle shaft flattened at one end and with a hole, which is afterward formed to a hexagon shape over the nut to be turned. A wrench made in this way naturally gives a tight fit. It is also strong enough for the work.—H. R. West, Hall Motor Co., Fort Collins, Col.

Industry Breaking Record of 1920

DECEMBER WILL SHOW BEST YEAR EXCELLED

Production Being Kept at High Level—No Let-Up Apparent in Sales

NEW YORK, NOV. 27.—The automotive industry will enter December with all records in its production history broken. The eleven months' period of 1922 is expected to show an excess of approximately 100,000 cars and trucks over the output for all of 1920, which established a record not surpassed up to this time. Estimating the November output at 200,000, at least, the aggregate for the eleven months will reach 2,313,000, compared with the 1920 total of 2,205,000. Based on this estimate the production for the full year will closely approach, if it does not reach, 2,500,000.

There is no apparent let-up in demand. Shifting of sales effort from sections where there has been a slight decline to districts where interest is keeping to a high level has equalized sales so that a good general average is being maintained. None of the major operating companies have tapered off their production schedules, with output centering around the closed car. The demand continues strong for this type, although there is evidence of renewed activity in sections where the open car carries a special appeal.

Cotton Prices Help Sales

On the Pacific Coast and in the South, conditions are particularly encouraging. High prices for cotton and other farm products in the southern States have been accompanied by a growing demand for cars which is making this section one of the most attractive in the sales field.

While dealers have not yet made serious efforts toward stocking up cars, there is a trend in this direction to prevent a possible shortage in the spring. This movement probably will take more definite shape as soon as transportation facilities can be diverted from immediate needs.

No improvement is noted in the rail situation. Deliveries of cars are still behind, and greater difficulty is being experienced in getting through steel shipments from producing centers. The lack of adequate shipping facilities, aggravated by the approaching season for the closing of navigation on the Great Lakes, continues to be one of the chief obstacles confronting the industry.

Trucks are moving forward steadily in production, light delivery vehicles meeting with the greatest popularity. Conditions in this branch of the industry are showing marked improvement. Tire manufacturers are moving toward increased output, to establish stocks of the finished products. Parts makers report conditions excellent, with orders booked far in excess of their expectations for this season.

While the fuel situation has eased greatly, there is still a lack of bituminous coal, which calls for the greatest economy in its use, but this shortage is not so serious as to cause concern.

OCTOBER PRODUCTION AGGREGATED 238,514

WASHINGTON, Nov. 28—Figures received by Department of Commerce through the Bureau of the Census place the total production of passenger cars and trucks in October at 238,514.

The following table gives the total production for each of the last four months, with corresponding figures for the same months of last year. With a few exceptions, the reports each month are from identical firms and include approximately 90 passenger car and 80 truck manufacturers. October figures are subject to slight revision when all reports have been received.

	1922	1921
Passenger Cars		
July	224,057	165,574
August	249,225	167,705
September	187,128	144,669
October	217,098	134,734
Trucks		
July	21,357	10,766
August	24,200	13,080
September	18,656	13,648
October	21,416	12,813

Ford's October Output

DETROIT, Nov. 26—Ford Motor Co.'s October production in its American plants totaled 121,765 cars and trucks, approximately 32,000 more than any previous October. September was 89,000 and in the foreign plants October showed an increase over September in each place.

Baltimore Winton Dividend

BALTIMORE, Nov. 27—The Board of Directors of the Winton Co. of Baltimore, Inc., has authorized the payment of dividend at the rate of 8 per cent per annum to Sept. 30, 1922, on the preferred stock, to stockholders of record as of that date.

SCOBIE IS ELECTED NEW EARL PRESIDENT

Choice Gives Satisfaction to Financial Interests in Back of Company

JACKSON, MICH., Nov. 25—George C. Scobie, vice-president and treasurer of Earl Motors, Inc., under the Earl regime, has been elected president to succeed Clarence A. Earl, resigned. Scobie is a Jackson man, having served successfully with Hayes Wheel Co. as auditor, controller, secretary and director, continuing in the latter capacity after joining Earl.

Before becoming identified with the Hayes company, Scobie was a member of the accounting staff of Price, Waterhouse & Co. and has a long financial and business experience. He became active in the Earl company together with other Jackson men early in the year when the company experienced financial difficulties.

His place as head of the company has created general satisfaction in Jackson where the residents have a large financial interest in the company.

New Sales Manager

W. E. Stalnaker, formerly distributor for the Premier Motor Car Co. in Chicago and vice-president and sales manager of the former Pathfinder Co., Indianapolis, has been named general sales manager of Earl Motors, Inc. He is one of the well known men of the industry, and while a distributor was one of the most successful in the western territory.

Stalnaker is mapping out plans for 1923 which are designed to give Earl the most extensive representation it has had. Territories both East and West will be carefully mapped out, and many important dealer connections will be signed in the time before and during the New York and Chicago shows. He will attend both shows personally and will renew many acquaintances made during his former connections in the industry.

Several other changes will be made in plant departments, but Scobie has deferred announcement on these pending a thorough consideration of the needs of the company. Though the company has made progress during the year as attested by its improved position at the national shows it is planned by the new executive to bring it much more to the forefront.

With Scobie as president, the company is reported to be in position to secure ample financing at all times as he enjoys a large measure of confidence of the interests backing the company.

Would Have Job Govern Truck Sale

WAY TO END HOSTILE LAWS, STATES FENNER

Overloading One of Subjects Discussed at Highway Meeting in Michigan

GRAND RAPIDS, MICH., Nov. 25—Classification of motor trucks as measuring tools rather than carrying tools has been responsible in a large measure for the inauguration of regulatory statutes in many States, David C. Fenner, manager of the public works department of Mack Trucks, Inc., told delegates to the convention of the north central division of the National Highway Traffic Association.

To overcome hostile legislative sentiment, he said, trucks must be sold according to the work they are to perform, and manufacturers can aid by indicating clearly the general capability of the truck to perform it. The convention was held in joint session with the Michigan State Good Roads Association in preparation for active participation of the two organizations in highway legislation in the coming year. Representatives of all elements in the industry were present, prominent among whom were delegates of transportation associations and other truck manufacturing and operating interests.

Fenner's talk, with a paper on "Lights for Highway Vehicles," by David Beecroft, directing editor of The Class Journal Co. and vice-president of the North Atlantic division of the National Highway Traffic Association, featured the meeting.

Chapin Speaks on Financing

Roy D. Chapin, president of the Hudson Motor Car Co. and Michigan director of the National Highway Traffic Association, was chairman of the afternoon session and spoke at the evening session on financing of State highways.

On the subject of overloading, Fenner said:

We are handicapped by lack of standards for truck rating and classification, so no comparison can be used. A motor truck is a carrying tool, but not necessarily a measuring tool. It should be in the same general classification with the shovel and wheelbarrow and not with the quart, peck and bushel basket. Truck overloading is due in part to the improper basis of rating and classifying the motor truck chassis in terms of the manufacturer's rated pay load capacity. The user soon learns that this does not mean anything.

He attaches a body which may or may not fit either the chassis or the commodity he carries and loads it to suit himself. The motor truck body is the real measure of capacity which determines the size of the chassis which must be used to carry it loaded with the commodity to be handled.

In the sale of motor transportation the successful salesman conducts a survey which convinces the customer that a certain type, capacity and weight of body are necessary to fill his transportation requirements. He sells the customer this body and then he is in a position to sell the proper type and size chassis to carry this body loaded to capacity with the particular commodity.

The large number of misfit trucks on the road today are examples of the other method of selling the chassis first and allowing the customer to put on any old body and load it any old way. The body may include many items of special equipment, as hoists, winches, pumps, etc., the weight of which must be considered in the selection of the chassis and the pay load to be carried.

Accidents on highways due to faulty lighting of motor vehicles were supplemented in many instances by improper road conditions, Beecroft said, due to poor highway illumination, curves and other dangerous conditions. Motor cars are too often overlighted and trucks underlighted. He condemned the proposed additional lights on trucks to indicate their widths as unnecessary in the experience of many States.

Showing how highway illumination might be used for reducing dangerous conditions, he told of the effectiveness of lights on railroads, rivers and canals. Railroads are not complete when the road beds are built, nor channels when dredged, the light systems being just as important, he declared, for safe operation as the construction.

Things to Look Forward to in Motor World

Next week—A new idea in cooperation to protect and promote the automotive industry and the use of motor vehicles in legislative action. All over the country legislatures will be convening in a few weeks. Every distributor, jobber, dealer and garageman can help the industry get what it deserves. A story in this issue will tell how it can be done.

Last week in December—The Before Shows Number, looked forward to as an annual treat by Motor World readers, will be issued Dec. 27. There will be several new features and a wealth of interesting and useful information for the automotive man.

December and January—Motor World has in prospect some important articles on Salesmanship Training, Modern Methods of Compensating Salesmen, the Broader Meaning of Better Highways and other subjects of vital interest to the trade.

BESSEMER-AMERICAN MERGER ANNOUNCED

One Selling Organization Will Take Care of Both Cars and Trucks

NEW YORK, Nov. 25—Awaiting only the formal approval of the stockholders to make it effective, the merger of the American Motors Corp. of Plainfield, N. J., and the Bessemer Motor Truck Co. of Grove City and Philadelphia, is announced.

The consolidated company will be known as the Bessemer-American Motors Corp. with the Plainfield concern a dominant factor. The new concern will have a capitalization of $2,000,000 of 8 per cent participating preferred stock and 200,000 shares of common stock, with assets in excess of $3,000,000, it is understood. It is hardly likely that the two parties concerned will be brought together until the first of the year. Until that time each will continue as before, with Ralph D. Mock as general manager of the Bessemer company.

The Bessemer Motor Truck Co. was established more than 10 years ago and makes a line of trucks ranging from one to four-ton. It has two plants located in Grove City and Philadelphia, and when the merger is completed it is understood that operations will be consolidated at the Philadelphia plant.

The American Motors Corp. manufactures passenger cars and has been put on its feet in the last year through the efforts of President Carl H. Page, who has cleared away the financial difficulties of the concern since he took control.

Under the merger plan the consolidated company will have a complete line of trucks and passenger cars, handled by one selling organization.

YEAR WILL SHOW 5,000 RICKENBACKERS BUILT

DETROIT, Nov. 25.—Rickenbacker Motor Car Co. will complete its first year of operation with a total business of about 5,000 cars, a record which is considered eminently satisfactory, and a total which will be doubled in the coming year. These figures on the business of the company were furnished by President B. F. Everitt in a statement accompanying an announcement of a five per cent cash dividend to be paid Feb. 1.

The declaration of the dividend evidences the financial return that the company has enjoyed despite the heavy expense of tooling-up and the overcoming of initial production losses.

Everitt declared that the company is following out a dividend policy of distributing a substantial part of earnings among stockholders.

HUPP HAS SCHEDULE FOR 40,000 IN 1923

Represents One-Third Increase Over Original Estimate Made for This Year

DETROIT, Nov. 25—Hupp Motor Car Corp. has set a schedule of 40,000 cars for 1923, approximately one-third of which will be closed cars. The schedule represents a one-third increase over the schedule for this year which was fixed originally at 30,000, but which will reach approximately 35,000. It has been estimated that the export business in 1923 will reach 2500 cars, an increase of about 1000 over the 1500 total this year.

Dealer Force Increased

The company has just concluded its annual distributor convention which was attended by 90 per cent of its wholesale organization. Contracts for cars for 1923 signed at the convention were in excess of the company's scheduled output. It was pointed out, however, that the schedule did not represent the company's manufacturing capacity, but was a conservative figure fixed after careful study of probable business conditions in the new year.

General Sales Manager O. C. Hutchinson, at the convention, said that the company's dealer and sub-dealer organization had been increased from 900 to 1500 during the year and that a further increase would be made this year. The company will hold its usual dealer meetings at New York and Chicago during the national shows at each of which 500 dealers will be entertained.

Hutchinson urged the distributors to co-operate and assist dealers in meeting merchandising requirements. Particular attention should be paid to educating the retail salesmen as these men, in the final analysis, he said, are the ones who eventually sold all the cars for the factory. Marketing methods should be studied and improved constantly he said so the dealers may keep their establishments at high efficiency.

The only reports the company has had of used car difficulty were from dealers who tried to do more business than their districts warranted, Hutchinson said. At the time the factory pointed out the fallacy of forcing business, he declared. Under its merchandising policy, Hupp was always in a position to divert its product to districts in which there was assured demand, he said, without loading dealers in territories temporarily caught up.

Flat Rates Described

C. E. Salisbury, service manager, described the company's flat rate system which he said was now being used by practically all of its distributors. Within a short time all distributors and larger dealers will have the flat rate system in effect, he said, as experience has shown it to be most satisfactory both to the owner and to the operator of the large service shop.

STATE CANNOT GET TAX FROM GASOLINE

WASHINGTON, Nov. 28—Motorists in the State of Arkansas cannot be forced to pay a gasoline tax, pending the final adjudication of the constitutionality of the question as to whether or not a State can levy a tax of one cent a gallon on gasoline and kerosene.

The Supreme Court has granted an injunction on the application of the Pierce Oil Corp. to continue in force a temporary injunction secured in the Federal courts against the enforcement by the State of a State tax of one cent a gallon on gasoline consumed in motor vehicles.

The constitutionality of the question is now before the United States Supreme Court and pending the court's decision it was held that the temporary injunction in Arkansas must stand.

Hupp business at present is running largely to closed cars but the company reports that 50 per cent of present business in open models is for the special sport models which it introduced last month. The demand for open models at this season has been largely increased by the special line. Next fall the company will be prepared to increase its output of closed cars over the one-third quota set for the early part of the year.

NEWARK ADOPTS PLAN TO HANDLE USED CARS

NEWARK, N. J., Nov. 23—More than 20 motor car dealers of Newark to-night adopted a plan of co-operation in establishing used car market values. Other dealers are expected shortly to join the movement, which got under way with a budget prepared for the first year's operation and with George Smith, a former Newark dealer, as secretary. W. E. Dusenbury of the Reo branch was made chairman of the used car committee which will govern the work.

The co-operative plan was decided upon at a meeting held under the auspices of the Newark Automotive Trade Association and attended by 100 dealers from Newark and other New Jersey cities. L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, whose plan was adopted by the Newark trade, made the principal talk.

Sanders in Brooklyn

BROOKLYN, N. Y., Nov. 24—L. B. Sanders of the Boston Used Car Statistical Bureau addressed 48 Brooklyn dealers to-day, telling about the success of co-operative plan in the Hub. The meeting took informal steps which it is expected will lead to co-operative action on used cars.

STUDEBAKER REACHED QUOTA NOVEMBER 15

Took Only Ten and One-Half Months to Produce Estimate for All Year

SOUTH BEND, IND., Nov. 25—Just a year ago announcement was made by President A. R. Erskine that Studebaker would manufacture 100,000 motor cars in 1922. This quota was reached on Nov. 15. In fact, when the whistle blew the afternoon of the 15th, 100,008 Studebaker Sixes had left the factory this year. The 1922 schedule was reached and passed in exactly 10½ months.

Studebaker plants continue to operate at capacity, demand for all models still being considerably in excess of production. Thousands of sales are said to have been lost this year because production could not keep pace with demand.

Large additions to Studebaker plants are now being constructed, both in South Bend and Detroit to take care of the planned production in 1923 of 150,000 cars.

SIX-CYLINDER TEMPLAR MAY SUPPLEMENT LINE

CLEVELAND, Nov. 26—The Templar Motor Co. in all probability will place a six-cylinder car on the market. The four-cylinder car will be continued.

The price will be such that both cars will come into the market under much better conditions from the price standpoint. This feature is being planned with the idea of much larger production and larger sales of cars.

In the meantime Receiver T. L. Hausman, who is in active charge of the plant operations, is making new cars and shipping them daily. All dealers are being supplied with parts, and the court protection that was secured has enabled Hausman to obtain sufficient working capital and thereby overcome what had been a serious handicap.

Business has exceeded the expectations of the receiver.

WIRE WHEEL ENTERS STEEL DISK FIELD

BUFFALO, Nov. 28—The Wire Wheel Corp. of America will produce and market a new steel disk wheel which will be called the Buffalo. This step has not been taken until the situation had been thoroughly canvassed, and General Manager O. J. Rohde convinced of the public demand for disk wheels. Years have been spent in developing the wheel, and the company has had the co-operation of factory engineers and production managers.

Mechanical features will not be announced until the national shows, when the new type will make its debut.

The Wire Wheel Corp. of America, one of the pioneers in its field, has heretofore confined its manufacturing efforts to wire wheels.

CAR PLANT RUMORED FOR WEST VIRGINIA

Reported That Factory Will Be Constructed There at Cost of $10,000,000

PITTSBURGH, Nov. 26—Orders received by Pihl & Miller, Inc., of Pittsburgh, construction engineers, for a great quantity of constructional steel lend strength to the rumor that a large automobile plant will be built at Ridgeway, a township near Martinsburg, W. Va. The Pittsburgh firm admits receipt of the order for material for an automobile plant in that town, but refuses to mention any names.

It also has developed that the interests back of the deal have bought 3000 acres of land at an average price of $200 upon which the plant will be constructed.

According to the rumors, the plant is to cost $10,000,000. No stock has been offered for sale, and efforts to find out who is back of the project have failed so far. It is said, however, that financial interests of Pittsburgh and Detroit are fathering the project. It is known, however, that one of those approached is Harvey S. Firestone, who is reported to have refused to go into the deal.

As far as can be gathered, the project contemplated is something similar to the Marysville venture of Wills Ste. Claire in that it is expected to build a city of 16,000 homes at Ridgeway.

Dealer Designs Own Building

ATLANTA, Nov. 28—D. C. Black, president of the Atlanta Automobile Association, and one of the Atlanta Buick dealers, has finished construction of a new and permanent home for his Buick agency in this city. Black, who is an engineering graduate of Georgia School of Technology, designed the building himself, which provides 18,000 sq. ft. of floor space, and includes a large service station.

PREDICTS THAT RADIO WILL CONTROL FLEETS

NEW YORK, Nov. 29—Radio as a means for controlling the operation of motor truck fleets in the near future was predicted last night by F. W. Fenn, secretary of the motor truck committee of the National Automobile Chamber of Commerce, whose discourse on the evolution of transportation was broadcasted from the WJZ station at Newark, N. J.

"Undoubtedly, as time goes on," Fenn said, "motor truck fleets will be dispatched from one end of the country to the other by means of the radio, with resulting efficiency and economy to shippers and operators alike. In other words, the radio will be the eyes through which the traffic managers in our major cities will be permitted to watch closely the work of their operators for the benefit of business in general."

Republic Truck Statement

ALMA, MICH., Nov. 28—Republic Motor Truck Co. receiver has issued a statement showing the company's financial condition as of Sept. 28. The assets, excluding good will, shop rights, etc., are fixed by the appraisers at $6,289,929. Liabilities to all classes of creditors of record total $5,181,861.

New Buick Home in Indianapolis

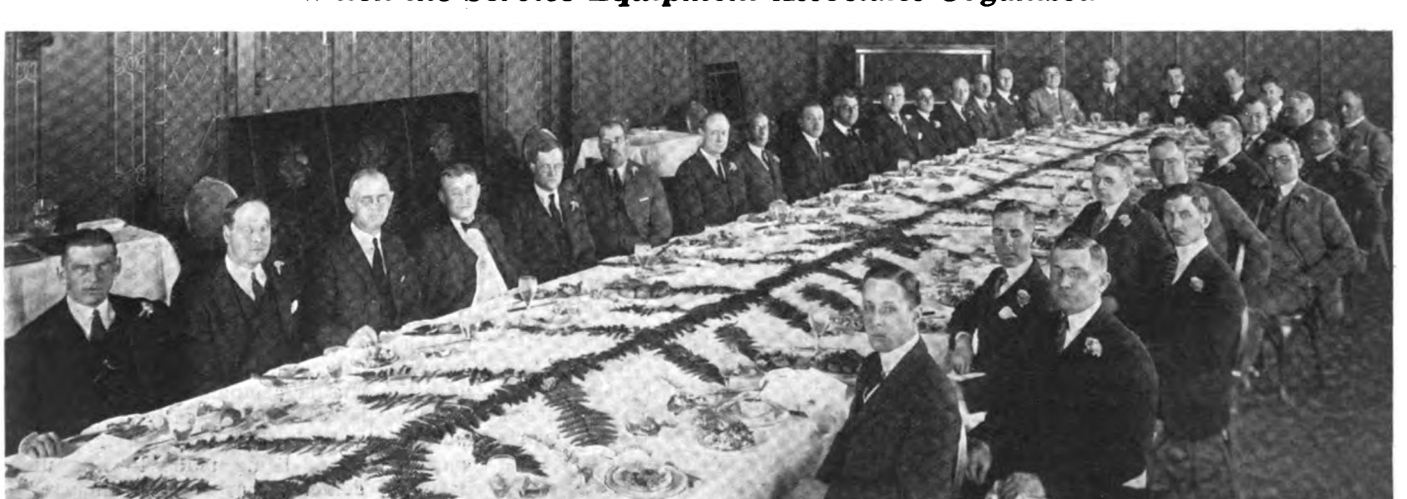
INDIANAPOLIS, Nov. 27—The local branch of the Buick Motor Car Co. will occupy a new three-story building here at a cost of nearly half a million dollars.

FORD MAY INCREASE OUTPUT IN SPRING

Number of Unfilled Orders Largest on Record—Lincoln Booked Far Ahead

DETROIT, Nov. 27—Ford production next spring may reach between 7000 and 8000 cars a day as compared with the record-breaking 5380. At the present time Ford has more unfilled orders on hand than ever before in the history of the company, while the Lincoln plant is said to be booked for two years ahead and making money at the rate of $1,000,000 annually.

In an interview, Ford declared that his cut of $50 a car on a production of 5000 cars daily, which represents a decrease in gross of $250,000 a day, has not resulted in financial loss and he referred to his unfilled orders as proof.



Ford plans are said to include operating the plant at capacity the year around, making cars principally in the second and third quarters and in the first and final quarters keeping busy with the manufacture of parts for stock and replacement.

Coal for blast furnaces is being obtained at the mines at an average of $4, while there is a proportionate saving made on steam coal. Ford believes these prices are the result of his closing his plants for four days.

Glover Heads Timken Axle

DETROIT, Nov. 27—Fred Glover, vice-president and general manager of the Timken-Detroit Axle Co., has been elected to the presidency, following the resignation of A. R. Demory. The resignation is effective Dec. 2, when Glover will assume the presidency, and H. W. Alden will succeed to the position as chairman of the board. No other changes in the organization are contemplated.

When the Service Equipment Associates Organized

This picture was taken when the Service Equipment Associates, a new trade body, organized in Chicago, Nov. 17, to promote education as the proper understanding and use of equipment in automotive maintenance establishments. G. W. Brogan of the Black & Decker Manufacturing Co. presided. The organization had its beginning last May when a group of equipment manufacturers agreed upon a plan of pooled advertising of the educational type

CAMPBELL SEES GAIN IN NORTH CAROLINA

Chevrolet Sales Head Hears Optimistic Reports During Trip There

DETROIT, Nov. 25—Commenting on business conditions in the South Atlantic district, Colin Campbell, general sales manager of Chevrolet Motor Co., declared North Carolina to be showing remarkable gains in an industrial sense, so much so that hydroelectric companies in that district have announced that they are unable to make additional contracts for power.

Bankers in that district advised him on a recent trip that bank deposits in that State have reached a higher mark than ever before. Many cotton factories are working two shifts he said and the demand for labor is taxing the district. Under the influence of higher prices for cotton, the last of the crop of two years ago is being rushed to market, and there is little possibility of further storing by growers.

The highway construction program of the State is also furnishing a large amount of employment and, in addition, is creating an increased demand for automobiles. Sales of low priced cars in that territory have shown remarkable increases in recent months, he said, and the outlook for large business in 1923 is especially bright. Better prices for grain and oats in the middle Atlantic States are also strengthening the car demand in those districts, he declared.

COURT UPHOLDS LAW BONDING TAXICABS

NEW YORK, Nov. 28—The Appellate Division of the Supreme Court has upheld the validity of the state law requiring the bonding of taxicabs in cities of the first class. This decision was made in the test case of Charles Martin, who failed to comply with the law which calls for a bond of $2,500 for each taxicab to guarantee compensation if a passenger is injured.

Justice Dowling, who wrote the decision, held that the validity of the statute was not affected by the expense, however heavy, that must be borne by the owner of a taxicab. For every six taxis there was a death each year in New York City, the justice said, as compared with one fatal accident for every 20 passenger cars of other types.

Stewart-Warner Dividend

CHICAGO, Nov. 29—Stewart-Warner Speedometer Corp. has declared an extra distribution of $1 a share on the common stock, thus bringing the year's payments up to $5 a share. Next year, there is every reason to believe the stock will be on a $5 basis. The company, it is said, now has more than enough cash to pay such dividend and has no indebtedness, outside of current bills. Sales up to Nov. 15 more than equalled those for the entire year of 1921 and net profits for the first nine months of this year totaled $3,514,078, or the equivalent of $7.32 a share.

GIVES TRADE WARNING ON ACCIDENT EFFECTS

PITTSBURGH, Nov. 26—Members of the Pennsylvania Automotive Trade Association were warned last week by Benjamin G. Eynon, State registrar, that "while the effect of accidents on sales is negligible now, that time will come when the cumulative force of abuses will deal a crashing blow to the industry."

He said the time will come when the average citizen will demand legislation forbidding the building of engines above a certain speed and restricting fast traveling. He predicted over 760,000 cars and 66,000 trucks will be registered in Pennsylvania this year, and probably 900,000 cars and 80,000 trucks next year.

TWO BIG BUILDINGS GOING UP ON COAST

SAN FRANCISCO, Nov. 28—Business in the automotive merchandising line is so good in the Pacific Northwest and the Pacific Southwest that two big buildings are being erected, one in Portland and one in Los Angeles, to house growing firms in this line. The Howard Automobile Co., distributors of the Buick for this territory, is erecting a four-story concrete and steel building in Portland, Ore., to be devoted exclusively to the sale, service and repair of Buicks. Don Lee, distributor for the Cadillac, is building a seven-story structure in Los Angeles, for the exclusive sale and distribution of the Cadillac.

In Los Angeles, the used-car department will be continued on Main Street, and the Don Lee Coach and Body Works on another street, giving this distributor a total of 220,000 sq. ft. of space in Los Angeles, a few feet more than in the northern headquarters in San Francisco, where the nine floors are now being converted into a "24-hour automobile department store," with night and day service and sales. Lee believes that the better the building and the finer the sales and showrooms, the greater the sales.

Dealer Has Drivers' School

CHICAGO, Nov. 25—A school for owners and drivers of Ford cars and trucks is being conducted by Charles J. Dempsey, Inc., Ford dealer here. Classes are held from 7.30 to 9 o'clock every Tuesday evening for 10 weeks. Lectures are illustrated with charts, and at the end of each lecture a printed copy, containing reproductions of all the charts used, is given to each pupil. A tuition fee of $5 is charged to cover the cost, and the enrollment is limited to 100.

COMPANIES INCREASE NUMBER OF DEALERS

Leading Manufacturers Also Throwing Open Restricted Sales Territories

DETROIT, Nov. 25—Stocking of dealers on a limited scale is getting under way against the early spring demand, by manufacturers with strongly financed dealer organizations. Though there is a continued large demand in closed cars, the demand for open models has fallen off extensively in most parts of the country, and factories maintaining major operations are doing so by building against next year's purchases.

The lightness in the stocking this year, as compared to others may be traced directly to the increased demand for closed models which is placing the industry more firmly on an all-season basis. Many persons, otherwise purchasers of open models in the spring, are buying closed models now, making immediate business possible where formerly an open model would have been carried over.

Closed Car Output Big

Closed car business in almost every branch of the industry is now exceeding 50 per cent of total output. With manufacturers of better priced cars it is running as high as 70 to 80 per cent. Manufacturers running on close to normal summer schedules, are stocking dealers with open models, though a large number of open models are being sold at this season due to the increasing popularity of special sport designs.

The closed car demand alone now has reached proportions adequate to carry most manufacturers through the winter on satisfactory earning basis, but the outlook for spring is regarded as warranting continued manufacture of open cars in large quantity. Manufacturers whose dealers are not stocking are operating on immediate business alone on schedules ranging from one-half to two-thirds lower than schedules in force during the summer.

Changes Made in Dealers

Companies are pushing vigorously their campaigns for increased dealer representation, and many important retail and distribution changes are being made every day. Restricted sales territories are being thrown open by many leading manufacturers, resulting in many dealers in less popular lines taking over sales of the more popular product, but in some cases this conditions is inverted and sub-dealers of the big lines are switching to exclusive sales contracts with the smaller company.

There is tremendous activity in the sales field, all through the industry, and every effort is being made to line up desirable dealers wherever they may be had. The building up of dealer organizations in cities continues strongly and apparently the larger companies will develop this policy more intensively than ever before.

STATE OFFICERS GET VIEWS ON TAXATION

Theft Question Is Also Discussed at Meeting of National Association

FRANKFORT, KY., Nov. 28—One of the outstanding features of the meeting of the National Association of Secretaries of State held here was the sentiment favoring more equitable systems of taxation for motor car owners in various states.

The conferees devoted considerable time to discussion of automobile thefts and sentiment favored a title law in each State as the best solution of the problem at this time. M. O. Eldridge, executive chairman of the American Automobile Association, speaking on behalf of the Automobile Association, told the State officials that more than $2,500,000 represented the value of stolen cars recovered since enactment of the Dyer Act in 1919.

Eldridge pointed out the need of dividing state finances into two groups. He said:

> There is a tendency in some states to place the entire cost of building and maintaining of trunk line highways on the automobiles, which is manifestly unfair and impractical. Motorists, as a rule, are willing to pay their just share of road taxes, but the American Automobile Association believes that the capital outlay for the building of new roads should be obtained from bond issues amortized over a period of years from general taxation, and that the maintenance expenses should be paid from current revenues obtained either partially or wholly from the users of the highways.

Officials from New Jersey support Eldridge in his contention and discussed the advantages of this division in the State of New Jersey.

Eldridge told the conference that motorists generally opposed gasoline taxes especially in view of high taxes levied on automobile owners by states and municipalities. He expressed the opinion that the gasoline tax would be the fairest form of levy in event the impost was in lieu of excessive taxes.

CHICAGO MOTOR BUS CAN EXTEND SERVICE

CHICAGO, Nov. 28—Permission to operate motor buses over south side boulevards here has been granted by the Illinois Commerce Commission to the reorganized Chicago Motor Bus Co. of which the president is John A. Ritchie, formerly head of the Fifth Avenue Coach Co. of New York.

The application of the Depot Motor Bus Co. for a similar permit was denied.

The new service must be inaugurated within six months, according to the terms of the permit. Officials of the company state, however, that service will be started in a shorter time and that from 40 to 50 buses will be put in service at the start.

The buses are to be manufactured in Chicago by a new corporation headed by Ritchie and operated as a subsidiary of the Yellow Cab Manufacturing Co.

PARADE SHOWS USES FOR LIGHT TRUCKS

ATLANTA, Nov. 27—To illustrate to Atlanta business men how their transportation problems can be simplified through the use of light trucks, the Atlanta Ford Motor Dealers Association held a series of commercial truck parades through all sections of the city each day during the week of Nov. 20, in co-operation with several manufacturers of motor truck bodies for light transportation use.

The parades began each morning at 8:30 at the Ford company's Atlanta plant, and continued through the morning, a different part of the city being selected each day. Twenty separate truck units were shown in each parade, all equipped with a different type of body. Large co-operative advertising space was used in the newspapers by the various dealers during the week.

MORE CITIES DESIRE TO BUILD SPEEDWAYS

SAN FRANCISCO, Nov. 28—Detroit, Atlantic City, Altoona and Norfolk are negotiating with Jack Prince, builder of the speedways at Cotati, Fresno and near San Francisco, for the construction of wooden bowls for automobile racing. This is only one of several interesting statements made by Fred Wagner, dean of starters, who stopped in San Francisco on his way to the Thanksgiving Day Races at the Beverley Hills track, Los Angeles.

The four cities have filed applications with the American Automobile Association for sanctions to hold races, according to Prince, thus indicating that the plans for the bowls and the financing of their construction had proceeded to a definite point in each of the cities.

Prince is now building a speedway at San Diego, which will be ready for the try-outs shortly after Jan. 1. He has made tentative plans and estimates for the Detroit, Atlantic City, Altoona and Norfolk bowls, but has not closed final agreements with any of them, according to Wagner.

Elizabeth Plant Builds First Star

NEW YORK, Nov. 23—The first of the Star cars to be manufactured at the Elizabeth plant came through on schedule last Thursday. While production will be at the rate of 25 a day for the time being, it is expected that by June 1 the Elizabeth plant will be turning out 500 Stars and 150 Durant fours a day. Elizabeth is the fifth Durant plant to start Star production, and the output is in excess of 200 a day in all these factories.

TARIFF OPERATION DELAYED BY MEXICO

Cars Can Be Imported Free of Duty Until Latter Part of Next Month

MEXICO CITY, MEXICO, Nov. 25—Foreign automobile manufacturers and dealers will have an opportunity to continue their shipments into Mexico unrestricted until the latter part of December and possibly until Jan. 15. The Treasury Department has issued an official order suspending temporarily the decree which placed an ad valorem duty of 10 per cent on all automobiles imported to Mexico. This decree went into effect early in October. It is stated that a considerable number of automobiles were imported while it was in effect, but under the new order of the Treasury Department these collections will be refunded to those who paid them.

The order was issued in response to a protest of the automobile dealers of Mexico City and other towns of the country who set forth in their plea for lifting of the duty that it worked a severe financial hardship upon them, inasmuch as they were not given time before the decree went into effect to replenish their depleted stocks of automobiles, and that many sales had been made at prices based on the importation of the cars free of duty.

It is stated that the suspension of the duty will continue until the outstanding orders for automobiles have been filled, which will be the latter part of December or the early part of January.

CANADIAN INDUSTRY BOOSTS GOOD ROADS

DETROIT, Nov. 28—A resolution endorsing the plan of the Canadian Good Roads Association to obtain from the Federal Government a further grant of $20,000,000 to assist provinces in road building and to provide an extension of time to provinces unable to take full advantage of the dominion appropriation within the time limit, has been passed at a meeting of representative manufacturers in Windsor.

The meeting was addressed by W. R. Campbell, vice-president and treasurer of Ford Motor Co. of Canada, Ltd.; Hon. J. L. Perron, K.C., minister of highways for the Province of Quebec and new president of the Canadian Good Roads Association; Hon. F. C. Biggs, minister of highways for Ontario; W. Sampson, president of the Canadian Automobile Association, and S. L. Suries, chairman of the executive committee of the Canadian Good Roads Association.

Jobber Has House Organ

COLUMBUS, Nov. 25—The Justus & Parker Co., automotive equipment jobber, has begun the publication of a monthly house organ under the title, "Hot Stuff."

SCHWAB TELLS DEALERS BASIS FOR OPTIMISM

Stutz Conference Hears of Prospects for Business Growth Next Year

INDIANAPOLIS, Nov. 28—Charles M. Schwab, president of the Bethlehem Steel Co. and a moving factor in the reorganized Stutz Motor Co. of America, told Stutz distributors and dealers, assembled here for a one-day conference, his reasons for believing that the country's business interests and the automotive industry should share his confidence of good times ahead and continued prosperity and increased trade during the coming year.

Schwab said:

After a little recession due to conditions abroad and to the recent election and the uncertainty due to future legislative action I find the outlook is very good and I am optimistic about it. I believe I can point out sound grounds for my optimism. The whole country needs material in every line and in great quantities. The railroads will need much steel. The farmers will get good prices for their crops, and so will the cotton growers for the world needs more cotton than it has for several years. In fact the world is short of every fundamental and will continue so. That means prosperity.

Continued and steady growth for general business and for the making and selling of automobiles can confidently be expected for next year. The marketing of farm crops at good prices and the continued growth of general lines will bring discount to the disturbing elements of the immediate present. By the first of the year we can confidently look for materially bettered general conditions, and a steady growth and expansion from month to month from then on. I do not look for a boom. I sincerely hope there will be none. But steady growth and progress I do look forward to.

The people seem to want more and more cars. With the probable growth and expansion and progress of general trade next year it would be quite unreasonable to expect the motor industry and trade to lag. All fundamental conditions point to steady growth and progress. The election being passed an element of uncertainty is removed. All conditions are better than they were a year ago. The motor industry made records this year. There seems no sound reason to expect anything but a growth and steady rise after the first of the year.

INDIVIDUALS LIST STOCK, NOT FORD

DETROIT, Nov. 23—Listing of the stock of Ford Motor Co. of Canada, Ltd., is not a company action according to a statement from the factory but the action of individual stockholders. The shares of the company have been listed officially upon the Detroit and Toronto Stock Exchanges for a number of years.

Quotations in New York approximating 400 are not unusual as the stock has been holding close to this figure and mounting as high as 440 at times on the local exchange. There is little trading in the stock which is closely held and few sales are in quantity exceeding ten shares.

Indiana Truck Names Gargett

MARION, IND., Nov. 27—F. W. Gargett has been named assistant to the president of the Indiana Truck Corp.

PULCHER AGAIN HEADS TRUCK ASSOCIATION

National Association Will Name Committee to Study Used Vehicle Problem

DETROIT, Nov. 25.—Title of the National Association of Motor Truck Industries was shortened at a meeting this week to Motor Truck Industries, Inc.

M. L. Pulcher, president of the Federal Motor Truck Co., will continue as president of the organization with H. T. Boulden vice-president of Selden, as first vice-president, Fred Glover, president and general manager of Timken-Detroit Axle Co., as second vice-president; Don F. Whitaker, general manager of the association, as secretary and general manager and A. S. More, president of Denby, as treasurer.

A service committee headed by George Dow, service manager of Federal Motor Truck Co., will be named which will make an immediate study of the used truck situation. Much of the difficulty in moving used trucks is thought due to inability of dealer to rebuild them owing to lack of money. The committee will make recommendations to directors Dec. 20.

The naming of the service committee illustrates the resources of the association in meeting conditions in the truck field with which specialized vehicle makers may be confronted. The entire organization of each member company may be drawn upon for specialists in particular work to serve on committees and perform other functions as they may be required. By specialized effort many former problems will be eliminated.

Distributor Celebrates First Anniversary

This is a picture of the First Anniversary Dinner of the W. E. W. Motor Corp. of Philadelphia, tendered by the Durant Motor Car Co., at the Hotel Adelphia, Nov. 13

CADILLAC CUTS PRICES ON ALL MODELS

NEW SCALE PUTS OPEN TYPES UNDER $3,000

President Rice Says Reduction Is Due to Increased Business During Year

DETROIT, Nov. 24.—Cadillac Motor Car Co. has made reductions of $215 to $265 on open styles and from $150 to $260 on closed models, the new prices to become effective Dec. 1. The new prices are declared by President H. H. Rice to be the result of largely increased business during the year, and to anticipations of still further increases in 1923. In connection with the price change, the company declares that the type 61 will be continued without change.

The new and former prices are as follows:

	Old Prices	New Prices
Roadster	$3,100	$2,885
Phaeton	3,150	2,885
Touring	3,150	2,885
Coupe (5-pass.)	3,925	3,750
Victoria	3,875	3,675
Sedan	4,100	3,950
Suburban	4,250	3,990
Limousine	4,550	4,300
Imperial Limousine	4,600	4,400

Under the new price scale, the company places all of its open models in a class under $3,000, and brings its four largest production models in the closed car type under $4,000. The company has been extending its sales and production with this thought largely in view. Sales in the first ten and a half months of the year have exceeded any best previous year. With extensions to plant and increased personnel, facilities for production in 1923 will reach a new high point.

In a statement on the new prices, Rice said:

The new prices are largely the result of the large production and sales of the type 61 Cadillac during the last year in which we have already sold more Cadillacs than in the best previous record year.

The type 61 Cadillac proved so popular during the last year that we were forced time and again to revise upward our production schedule to meet the demand.

The new prices are based on an even larger production schedule for 1923 than the record high production mark of this last year and on the many economies in manufacturing made possible by our new factory.

Bergougnan Increases Prices

NEW YORK, Nov. 26—Announcement is made that the Bergougnan Rubber Corp. of Trenton, N. J., has increased the price of its cord and fabric tires and tubes 12½ per cent, effective at once. The change in price is caused by the increased cost of production, due to the rise in the price of rubber and fabrics. The Trenton plant is now working at full capacity.

TELEPHONE SERVICE AS ANTI-THEFT AID

PITTSBURGH, Nov. 27—The Pennsylvania State Highway Department announces that the automobile division will furnish 24 hour telephone service daily to the public in supplying names of car owners. In the past it has been difficult to ascertain an owner's name in case of accident or theft after closing hours of the automobile division at Harrisburg.

Under the new plan any person in the United States will now be able at any hour, day or night, to secure complete information concerning any registration on file by calling the automobile division in Harrisburg by telephone.

ELECTRIC SERVICE ASSOCIATION GAINS

DETROIT, Nov. 24.—The directory of the Automotive Electric Service Association for 1923 will show a large increase in members over the total for this year. In this connection Secretary D. W. Burke is sending out a letter to prospective members urging them to file their applications in time to be listed in the new booklet.

Plans for the annual convention of the association have determined the Congress Hotel, Chicago, Florentine Room, as the place and Jan. 29, 30 and 31 as the dates. The board of governors will meet on the opening day, and the general sessions will be on the two latter days. A joint session with the Automotive Electrical Association, the manufacturers body, will be held on the closing afternoon. All electrical equipment dealers are invited to attend the open sessions. Over 200 members will attend the closed sessions.

A questionnaire to car dealers is now being circulated by the association to determine the effectiveness of the service that the equipment dealers have been rendering and requesting information for improvement. It will also serve to show manufacturers how equipment dealers and car dealers are co-operating and afford opportunities to put the service on the best basis from the owner viewpoint.

Schmidt Now Micro Machine

DAVENPORT, IOWA, Nov. 28—Manufacturer of the Micro machine, which is used in cylinder refinishing by the wet method, has changed its name from the B. L. Schmidt Co. to the Micro Machine Co. in order to link the name of the company with the name of the product.

BESSEMER CUTS LIST OF LIGHTER MODELS

Price Reductions Amount to $285 on 1-1½-Ton Truck and $405 on 1½-2-Ton

PHILADELPHIA, Nov. 27—Bessemer Motor Truck Co. announces price reductions on its two light models. The reduction amounts to $285 on the 1-1½ ton model and $405 on the 1½-2 ton model.

Ralph D. Mock, general manager of the company, stated that these reductions are not accompanied by any change in chassis specifications.

Complete new prices for all models are as follows:

	Old Price	New Price
1—1½ ton	$1,735	$1,450
1½—2 ton	2,395	1,990

The Bessemer plant reports greater sales in November than in any preceding month this year, and also appointed a number of new dealers and distributors. General Manager Mock states that the Bessemer policy of maintaining factory branches in certain principal cities will be continued and the number of such branches increased. All factory branches will carry new trucks in stock for the convenience of dealers in surrounding territory in making quick deliveries.

HAYNES INCREASES SIX MODEL PRICES

KOKOMO, IND., Nov. 27.—Price increases ranging from $55 to $280 on six of its models have been announced by the Haynes Automobile Co. The changes are as follows:

	Old Price	New Price
"55" Standard		
Phaeton 5-pass.	$1,495	$1,695
Sedan 5-pass.	2,395	2,595
"55" Sport		
Phaeton 5-pass.	1,895	1,950
"75" Standard		
Phaeton 7-pass.	2,395	2,595
Brougham 5-pass.	3,095	3,350
Sedan 7-pass.	3,395	3,675
"75" Sport (New Models)		
Phaeton 7-pass.	....	2,700
Phaeton 4-pass.	....	2,700
Brougham 5-pass.	....	3,475

Hudson Promotes Draper

DETROIT, Nov. 27—J. S. Draper has been appointed assistant sales manager of the Hudson Motor Car Co., his appointment being part of the change in the sales department by which Harry G. Moock becomes sales manager and H. B. Phipps, export manager. Draper formerly served as district manager.

SPARKS-WITHINGTON HOST TO A. E. A. PARTY

Second Annual Entertainment to Bring Officers and Jobbers Together

JACKSON, MICH., Nov. 25 — The Sparks-Withington Co. entertained a party of 150 men and women, including jobbers, officers of the Automotive Equipment Association, a number of business paper representatives and the wives of some of the guests. The visitors, who came here from the A. E. A. Convention at Chicago on a special train, watched the making of Sparton horns during the morning and in the afternoon were taken on another special train to Ann Arbor, where they witnessed the Michigan-Wisconsin football game.

The Sparks party had breakfast, lunch and dinner at the Jackson City Club, where an informal program of entertainment and speech-making was a feature of the dinner party in the evening. Captain William Sparks acted as toastmaster and the speakers included Colonel Winthrop Withington, Major Philip H. Withington, Harry and Clifford Sparks, N. H. Oliver, president of the Automotive Equipment Association, and Howard M. Dine, past president. A number of the jobbers and other visitors also made brief remarks.

This was the second annual Sparks-Withington party. Its object, to bring officers of the company and its jobbing representatives into closer acquaintance, was thoroughly realized. The guests departed, some of them Saturday and others Sunday, with a keen appreciation of Sparks-Withington hospitality, which even included provision of raincoats, ponchos and rubbers when it looked as though the football game would have to be played in the rain, a fear, however, which did not materialize.

JOBBERS REACH PEAK OF TRADE IN SOUTH

ATLANTA, Nov. 27—That automotive equipment business among southern wholesalers has now reached the highest point since the inflation period of 1920, and is steadily getting better over the entire district, was the consensus of the southern jobbers who attended the convention this month of the Southern Automotive Equipment Jobbers Association, held at Nashville, Tenn.

More than 50 of the South's leading jobbers and their salesmen were present, with a number of factory representatives of various equipment lines. E. H. Baughman of the Ozburn-Abston Co. of Atlanta is president of the organization. Most of the jobbers left Nashville to attend the national meeting at Chicago.

Fulton Co. Entertains Force

MILWAUKEE, Nov. 27—The Fulton Co. of Milwaukee, manufacturer and distributor of automotive equipment, entertained its branch managers and field force at a banquet following a sales conference at the factory at the conclusion of the Automotive Equipment Convention in Chicago. The meeting was conducted by S. M. Fulton, president and general manager, and L. M. Fidler, secretary and treasurer. Among the guests were Earl LaPorte, Atlanta; George H. Lewis, Kansas City, L. T. Ware, Los Angeles; J. E. Murphy, New York.

TRACTORS ARE NOT "MOTOR VEHICLES"

MILWAUKEE, Nov. 28 — The question whether or not tractors are amenable to the State motor vehicle license laws of Wisconsin has been settled by an opinion of the Attorney General, holding that no license need be taken out by the owner.

The opinion says that tractors are not "motor vehicles" within the meaning of the statute, and explains: "It should be noted that the State department always has construed the law to exclude tractors from the class of motor-driven contrivances for the operation of which a license is required."

CONVENTION REPORTS TIRE SALES ON GAIN

ATLANTA, Nov. 27—More than 100 dealers of General tires in 11 southern States attended the annual sales convention of the General Tire & Rubber Co.'s southeastern forces, held at the Cecil Hotel here. It was the first meeting of the kind the company has held in the southern territory.

The Akron factory was represented at the convention by W. F. O'Neill, vice-president and general manager; Howard Smith, assistant sales manager; A. B. Stiller, advertising manager, and others. Sales that are many per cent better than the volume at this time last year was the report made by all of the dealers attending, with the 1923 tire outlook promising an unusually large volume all year in the southern field.

QUESTIONNAIRE SHOWS OPTIMISM IN FUTURE

NEW YORK, Nov. 26—"What in your opinion is the automotive outlook for 1923 with respect to finance and credit?" is the question asked of some of the leaders in the industry by M. L. Heminway, general manager of the Motor and Accessory Manufacturers Association in a questionnaire sent out. Replies received predict sound credit conditions and keen competition.

Heminway's correspondents in this symposium unite in declaring for unremitting vigilance in granting credit and show optimism tempered by caution as well as displaying a forward-looking faith in the dynamic progress of the automotive industry.

HUDSON EXPECTS PLAN WILL ASSIST DEALERS

Company Will Confine Producing and Selling Efforts to Fewer Models

DETROIT, Nov. 27—Hudson Motor Car Co. is now offering a line of automobiles which covers practically the entire medium-priced field with only seven models, Essex phaeton, cabriolet and coach and Hudson speedster, phaeton, coach and sedan. The prices range from $1,045 to $2,295, and in the Hudson plan each model is in a distinctive price class, the Essex closed models ceasing with the coach at $1,245 and the Hudson open models beginning with the speedster at $1,525.

The models and prices representing the complete line now are, the Essex phaeton (five passenger), $1,045; Essex cabriolet (single seat enclosed model), $1,145; Essex coach (five passenger), $1,245; Hudson speedster (four passenger), $1,525; Hudson phaeton (five passenger), $1,575; Hudson coach (five passenger enclosed), $1,625; Hudson sedan (seven passenger), $2,295.

In this arrangement is seen a merchandising policy which manufacturers and dealers of the country will watch with great interest, and which Hudson believes will prove of great benefit to the buying policy. By it the company will confine its manufacturing and selling efforts to a small number of cars, all of which are fast selling, and yet cover the entire field in the medium price. Each model is designed to fit a particular need, and the simplification of manufacturing problems results in prices most favorable to the buyer.

Sees Better Yield to Dealer

For the dealer it supplies a wide choice of cars without loading him with models with only limited buying appeal, the company declares. Factory officials state that such a line will yield a dealer a larger net profit on a year's business than one containing more varieties of cars, some of which would be less easy to handle than others. Fitting in with the policy is the new dealer financing plan which has been selected after two years of study of such plans, and which is declared unusually economical and dependable in operation.

Issues "Booster" Handbook

BOSTON, Nov. 27—At a meeting of the "Boosters Club," composed of manufacturers' representatives calling on the New England automotive trade, authority was given for the publication of the "Booster Handbook," the first issue of which contains the constitution and by-laws of the organization and a list of members. There are now Boosters Clubs in Kansas City and Denver, with others in formation in Chicago, Minneapolis, Dallas, San Francisco, Philadelphia and Atlanta.

CHANGES IN THE TRADE

Scott & Martin, Kewanee, Ill., has taken over Jewett line.

Alfred Pickup has taken the agency for the Chevrolet in Holyoke, Mass.

Akron Buick Co., Akron, Ohio, has increased its capital from $50,000 to $100,000.

Elm Garage, Holyoke, Mass., has become distributor of the Paige, Jewett and Haynes.

William B. Staley, Baltimore, has been appointed distributor for Traffic trucks in that city.

P. L. Emerson, of San Francisco, will handle the Star in San Francisco and San Mateo counties.

Cole-Louisville, Louisville, Ky., has been appointed distributor for the Cole in that territory.

Shackleford Chevrolet Co. has been organized in Atlanta by **C. B. Shackleford** and associates.

A. W. Davis is manager of the newly organized **Chevrolet Nashville Co.** at Nashville, Tenn.

F. H. Swival, as Swival & Co., St. Paul, has taken over local sales for the International truck.

I. J. Bartlett of the I. J. Bartlett Co., Minneapolis, will distribute the Cleveland car in the Northwest.

Independent Tire Co., of Memphis, has been appointed distributor for the Knight tire for the Memphis territory.

George C. Kanouse, of the Kanouse Auto Co., Indianapolis, distributor of H. C. S., has acquired the Columbia contract.

W. H. Halpenny, who has distributed the Lexington in Des Moines, has sold out his business and will spend the winter in California.

Peerless Auto Sales Co. has been organized at Canton, Ohio, by **E. F. Hask, J. D. Morris, Frank S. Crawford, L. J. Noaker** and **H. A. Roemer.**

J. C. Bartlett Motor Co., of the Ensley section of Birmingham, Ala., has been appointed dealer for the Chevrolet. The company also handles the Velie.

Clyde E. Erskine, for many years connected with the Chicago branch of Mack Trucks, Inc., has been appointed manager of the St. Louis branch.

Fred Grinham, formerly of the **Chevrolet Retail Store**, and **L. L. Johnson**, of the **Mephan-Chevrolet Co.**, have been appointed Chevrolet retail dealers for St. Louis.

E. A. Neff, who has been identified with the sales department of the Cole agency in Columbus, has been appointed distributor for that line in Columbus and vicinity.

Goree-Wise Auto Co. has been organized in Montgomery, Ala., to distribute the Durant and Star in that territory. **Luther H. Goree** and **Emil Wise** are the organizers.

Stevens Motor Co. of Birmingham, Ala., has been appointed dealer for the Chevrolet. **Frank Stevens**, for a number of years identified with the trade, is the president.

C. L. Philbrick, of Winston-Salem, N. C., has taken charge of the Franklin agency at Raleigh. He is succeeded as manager of the Winston-Salem agency by **Carl E. Hine.**

Broadway Motor Sales has established an additional salesroom in Louisville, Ky. The company is distributor in that territory for the Chevrolet. **Clarence J. Jacobson** is president.

Brock Motor Car Co., distributor of various lines of accessories, and retailers of the Haynes and Hupmobile, has been appointed distributor for the Mitchell for St. Louis and adjacent territory.

Vesta Battery Corp.'s St. Louis branch has been taken over by the **Equipment Service Co. C. J. Kloske**, formerly sales manager for the **Fred B. Campbell Auto Supply Co.**, is manager of the Equipment Service Co.

Truck Parts Co. has been organized in Atlanta, to handle parts of all kinds for heavy and light trucks in the southeastern territory. It is one of the few companies in the Southeast specializing exclusively in this line.

Pence Automobile Co., Minneapolis, wholesaler of Buick cars, has increased its capital stock from $1,000,000 to $3,000,000. **Harry E. Pence** is president. The company is erecting a building in St. Paul for local headquarters.

Joe R. Cook Auto Co., Davenport, Iowa, has obtained the agency for the Peerless automobile and will also handle the Mack truck. Cook lately went to Davenport from Burlington, Iowa, where he was in the automobile business.

Upper Michigan Motors Corp. of Marquette has taken over the distribution of Dort cars in ten counties of the upper peninsula. **J. S. Davis**, who has been in business in Marquette for years, is president of the company.

L. R. Green, for some time associated with the **International Harvester Co.**, and **C. L. Mullen**, recently connected with the **Herring Motor Co.**, have joined the sales force of the **Wayne Tank & Pump Co.**, and will work from the Des Moines office.

L. B. Tebbetts Co., St. Louis, has taken over the retail business of the **Battery Exchange, Inc.** The latter company will continue a wholesale business with authorized Philadelphia Battery stations throughout southern Illinois and eastern Missouri.

Ralph Brooks, formerly an Overland salesman, has joined the **Anderson Motor Co.** of Rock Hill, S. C., as district manager for Florida and southeast Georgia with headquarters in St. Petersburg, Fla. **Hawkins Motor Co.**, of St. Louis, is distributor for the Anderson.

The Watkins Motor Co. has been organized at Asheville, N. C., to distribute Maxwell and Chalmers cars in 17 counties of western North Carolina. **J. A. Watkins** is president of the company; **Bernard Bach**, vice-president, and **Jack O'Neil** secretary and treasurer.

Wire Wheel Corp. of America, of which W. Howard Metcalf, recently elected to the Pennsylvania Legislature, is branch manager, is moving from 328 North Broad street, Philadelphia, where it has been for the last seven years, to larger quarters, which will include as a new feature a complete enameling plant, at 222-224 North Fifteenth Street.

Hodson Motor Car Co., Louisville, Ky., has secured the services of **L. H. Sackett** to act as general manager of the company. Sackett for two years served as president of one of the big local automobile companies. The Hodson company has taken on the Rickenbacker recently and will distribute it throughout Kentucky and Southern Indiana.

Harry S. Whitehair has been appointed to the national sales division of the **General Motors Truck Co.**, of Pontiac, Mich. He will devote his time to sales to national organizations which use large fleets of trucks in all sections of the country, paying special attention to the companies which have headquarters outside of New York and Chicago.

Charles H. Newlin, associated with the Hudson Motor Car Co. eleven years, and recently factory branch office manager, has formed a partnership with **LeRoy Kussy**, three years purchasing agent at Camp Grant, and opened a Hudson and Essex salesroom and service station in Rockford, Ill. **G. A. Boyer** will have charge of the service station.

Berning-Payton Motor Co. has been organized in St. Louis to succeed **Holmes Motors, Inc.** The change of name followed the signing of a contract to distribute the Stephens car. The company will retain the distribution of the Holmes. **Henry G. Berning** is president and **C. T. Payton**, vice-president of the company. **A. E. Brown** is secretary and manager.

Schroeder Motor Co., recently organized by **Geo. S. Schroeder**, well known in the automobile industry in St. Louis, owing to his many years connection with the **Vesper-Buick Auto Co.**, has been appointed distributor for the Stearns-Knight car in St. Louis. Prior to coming to St. Louis several years ago, Schroeder was connected with the Buick factory branch in Kansas City.

David Rosenbach has resigned as director of sales of the **Farran-Kinney Co.**, of Chicago, to become manager of sales for **Dalton & Balch**, of Chicago, manufacturers of D & B silent timing gears. Rosenbach has been in the automotive equipment field for over 20 years, having been secretary of the Automotive Equipment Association and sales manager for the Rayfield carbureter.

R. M. Clapp, Greensboro, N. C., and **J. I. Clendenin**, Raleigh, have sold their stock in the **Guilford Motor Car Co.**, of Greensboro, to **H. M. Clendenin** and **A. M. Scales**, both of that city. The corporation has three offices, Greensboro, Winston-Salem and Raleigh. Scales will be president of the company as reorganized and Clendenin, secretary-treasurer and general manager. The company handles Franklin cars.

Paul J. Bingaman, J. H. Steele and **Harvey Wahl**, former employees of **L. O. Rothermel**, authorized Ford agent in Reading, Pa., have purchased his interests in the business, which they have reorganized as the **Windsor Motor Co.**, to handle Ford cars and Fordson tractors. Rothermel has taken over the local Packard distributing rights. Bingaman is in charge of sales; Steele is parts manager and Wahl has the management of the service end.

Metzger-Hurlburt Motor Co. has been formed in Detroit by **William E. Metzger** and **William B. Hurlburt** to handle sales of Columbia cars, the company occupying the same headquarters as the Wills Sainte Claire Co. of Michigan, which also is headed by Metzger and in which Hurlburt has been associated. Both Metzger and Hurlburt have been prominent in the industry for many years, a large part of the time being associated. Besides being one of the founders of the Cadillac, Metzger was the "M" of the E-M-F combination and has been a vice-president of Columbia Motor Car Co. for several years. Hurlburt, after being associated with Metzger in the early days of the industry, served as a distributor in eastern cities of several cars and later organized the Hurlburt Motor Truck Co. of New York. Since leaving the truck company he has been with Metzger in the Wills Sainte Claire distributorship.

Ford Meeting at Salt Lake

SALT LAKE CITY, Nov. 25—The Ford dealers of the mountain country held a two-day convention at the Newhouse Hotel. About 200 attended from all parts of the territory, the convention closing with a banquet.

Digitized by Google

ASSOCIATION ACTIVITIES

Closed Car Week in Louisville

LOUISVILLE, KY., Nov. 29—Twenty members of the Louisville Automobile Dealers Association staged special displays of closed cars in their salesrooms last week. Decorations in the way of autumn leaves and branches were used in many of the showrooms. Efforts were directed toward explaining closed car advantages rather than making sales, so that visitors to the various automobile establishments may feel free to call and inspect models on display.

Large beaverboard signs, bearing the lettering "Enclosed Car Week, November 20-25," together with the name of the car handled and the membership emblem of the association, were in place before the various automobile showrooms of dealers participating.

Nearly half of the automobiles sold in Jefferson County during the present year have been closed cars, according to figures compiled by the Louisville Automobile Dealers Association. This represents a substantial increase over 1921, when the percentage of closed cars was about one-fourth of the total sold.

An analysis of the figures shows that a considerable difference exists between low and high-priced automobiles in the matter of percentage of closed cars. In the low-priced field the number of closed cars sold in 1921 was 20 per cent of the total sales for that year. In 1922 this percentage has increased to 38 per cent.

In the high-priced field there is a high percentage of closed cars. Last year it was 41 per cent. This year it is 60 per cent.

Philadelphia Hears of Conditions

PHILADELPHIA, Nov. 28—Members of the Philadelphia Automobile Trade Association held a get-together meeting at the organization's headquarters and listened to talks on trade conditions by prominent business representatives of the city.

Louis C. Block, president, presided and introduced Edward Randolph, vice-president of the Girard National Bank. Randolph predicted good general business in 1923, basing his views on the fact that construction is going ahead rapidly, labor is more or less satisfied, cotton and wool growers have reason to be pleased and the railroads are carrying merchandise to capacity.

He indorsed the association's used car plan and stated that bankers regard with favor such conservative business methods. He warned them against over-allowances on traded-in cars, involving possible sacrifice when the used cars are eventually sold.

E. J. Cattell, formerly city statistician and now a field representative of the Chamber of Commerce, gave a talk on business conditions and foretold prosperity for the automobile trade.

Seek to Simplify Garage Law

CHICAGO, Nov. 27—The Chicago Garage Owners Association will endeavor at the next session of the legislature to effect changes in the state law requiring garage owners or proprietors to keep detailed records of the cars in their garages. At present the keeping of two sets of records is required, one under the state law and an entirely different form of record under the city ordinance. The state law requires a card to be filled out and signed by the owner or driver of the car. Literal compliance with both the state law and the city ordinance is considered almost impossible, and recently several garage proprietors in Chicago were fined $25 and costs each for failure to keep proper records.

The association will work for the enactment of a simplified law which would be uniform throughout the state and provide for the keeping of necessary records without imposing too great a burden on the proprietor. The association expects to co-operate with the Illinois Automotive Trade Association in the effort to bring about the enactment of such a law.

A membership campaign is under way by the garage association, a feature of which was an entertainment at a local hotel Nov. 15 at which non-members were guests. The "Shop Profits" film of the A. E. A. was shown, after which there was a dinner and vaudeville entertainment. About 230 were present.

Frampton St. Louis Director

ST. LOUIS, Nov. 28—R. C. Frampton, president of the Hudson Frampton Motor Car Co., Hudson and Essex distributor, has been elected to the directorate of the St. Louis Automobile Dealers Association. Frampton, who last year was president of the association, succeeds F. H. Squires, formerly branch manager in St. Louis for the White Co.

Election in Springfield

SPRINGFIELD, OHIO, Nov. 25—Fred W. Moyer was elected president of the Springfield Automobile Dealers Association at its annual meeting. The other officers chosen are: Vice-President, W. E. Stevens; secretary, D. C. Smith; W. F. Townsley, treasurer; new directors, Charles S. Burke and George W. Higgins.

It is planned to hold an automobile show at Memorial Hall in February.

Tire Warehouse in Fort Wayne

FORT WAYNE, IND., Nov. 27—The establishment of a warehouse in Fort Wayne from which tires and accessories will be distributed through at least six counties has been announced by George F. Guin, manager of the Toledo office of the Firestone Tire & Rubber Co.

Teaching Women Mechanics

FORT WAYNE, IND., Nov. 28—The Y. W. C. A. of this city has started a class in automobile mechanics for women. The first half of the term is devoted to fundamental questions of design and operation and electric systems, carburetion and the cooling system, while the last half is devoted to the consideration of ordinary engine trouble and repair methods. Many women have signed up to take the course.

Bosch Case Dismissed

WASHINGTON, Nov. 28—After more than a year's investigation by the Federal Government of the sale of the Bosch Magneto Co. by the former alien property custodian, the Government's suit to dissolve the sale has been dismissed by the District Criminal Court on the ground that no overt act was shown to have been committed and therefore not within the jurisdiction of the local court.

Flint Expected in December

NEW YORK, Nov. 26—Durant Motors expects to have the first of the new Flint cars out by the first week in December. There has been a slight delay in the original program, caused by a few changes in engine proportions. The Flint engine will be made by Continental, but will be built along lines laid down by both Durant and Continental engineers.

Packard Stock Dividend

DETROIT, Nov. 28—Packard Motor Car Co. will pay a 100 per cent stock dividend on Dec. 16 to holders of common stock, directors at a meeting determining that a portion of the accumulated surplus should be permanently invested in the business to care for needs created by its rapid expansion.

Receiver for London Plow

SPRINGFIELD, OHIO, Nov. 27—On application of Edwin L. Shuey, Jr., a stockholder, John G. Cooley has been appointed receiver for the London Motor Plow Co. by Common Pleas Judge F. W. Geiger.

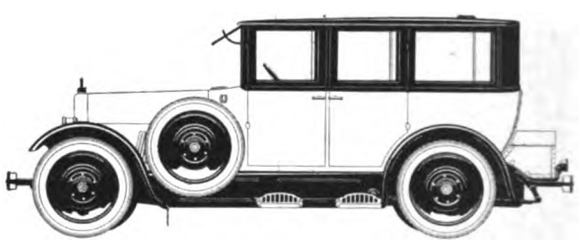
"The Big News" of the year

It's the latest achievement of Haynes foresight—outgrowth of the deep understanding of progress in motor lovers' requirements and the accurate knowledge of what the dealer can sell—which has produced the fully equipped sport cars now offered as the

HAYNES 55 SPORT SERIES

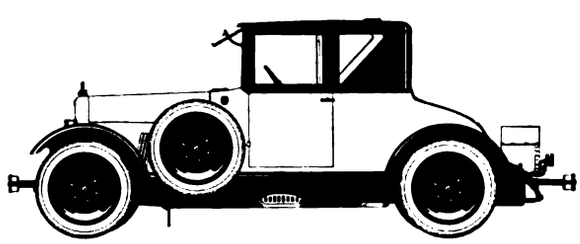
"No Extras to Buy"

THIS new series has met with such immediate and immense success because it is so thoroughly sound in principle and in understanding of motoring needs.



Such equipment as you will find on these new Haynes 55 Sport models is the equipment which any experienced motorist would put on the car himself, for comfort, convenience and style.

Haynes has simply put this equipment on the car as it leaves the factory. It means economy for the motorist, as well as correct harmony of each unit with the complete proportion of the car.



Six disc wheels, cord tires and tubes—sun and vision visor, rear vision mirror—trunk and protection bars—windshield wings on open models—a graceful body of rich maroon on a 121-inch wheel base—the famous Haynes-built light six motor—all these and many more factors are specific reasons for the tremendous welcome of these cars everywhere.

Are you interested in such sales possibilities as the Haynes presents? Well qualified dealers are invited to write, telephone or telegraph for appointment—confidential if desired. Address Department 1152.

THE PANAMA CANAL—50 miles long; 239,000,000 cubic yards of excavation; 5,000,000 cubic yards of cement; 12 locks—in pairs. Built by the nation's specialists made up into many groups performing individual tasks.

The industry's master achievement—the SPECIALIZED car

All the good intentions in the world could not have constructed the Panama Canal. It required the bringing together of the SPECIALIZED resources of the nation to complete the task.

Just so in the SPECIALIZED Vehicle the car builder has brought together highly specialized products—units—manufactured by completely equipped specialist organizations.

The public appreciates what it means to have all major units of a car—the motor, transmission, universal joints, axles and clutch—the products of the specialist organizations exclusively equipped to make those units.

The car buying public also knows the advantage of the uninterrupted performance assured by the parts-distributing stations throughout the world, supplying the parts for specialized units.

Benefit by the good will—the *buying* will—of the public! Identify your organization with a SPECIALIZED car.

And in seeing that the car *is* a SPECIALIZED Vehicle, consider the fundamental unit—the motor. If it's a genuine SPECIALIZED Vehicle you will find upon the crankcase of the motor the well known—Continental Red Seal.

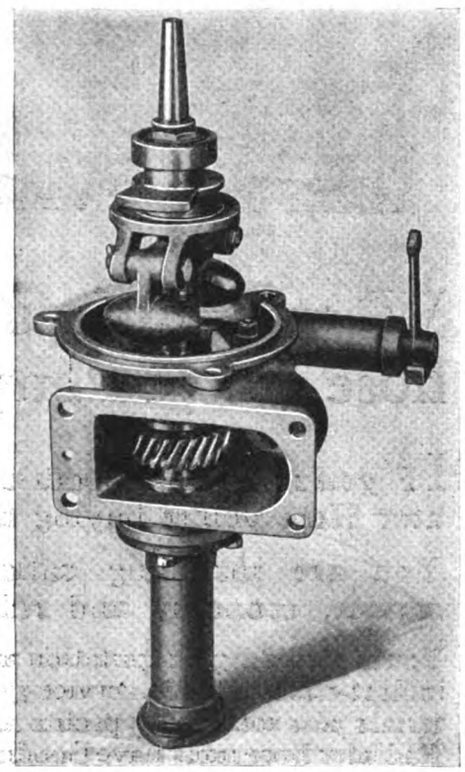
INDEX TO ADVERTISERS 120-121

What kind of radiator hose are you buying?

IF you're buying Goodrich Radiator Hose you're buying the best.

You are installing satisfaction, service, economy and reliability.

You are building a reputation as a dealer in first-class, reliable, service-giving materials *plus* increasing profits and trade. Radiator hose must have Goodrich Quality to give service. It must have the stamina and first grade materials to withstand the terrific heat from the engine, boiling hot water, splashing oil and abuse. Goodrich hose has these qualities —that's why you find it on the finest cars.



And that's why garage, tire and radiator dealers who value the car owner's good will buy and install it. For prices, etc., consult your nearest Goodrich Branch.

The Centrifugal Governor

is a unique feature effecting the control, and economy of operation, of the Rolls-Royce Motor Car. When the Governor lever on the quadrant is set to any given position it automatically controls the maximum speed at which the engine will develop power (without the use of the accelerator pedal.)

Thus, when the car is running at speeds higher than that for which the Governor is set, the throttle will close, when the accelerator pedal is released, but, at lower speeds it will remain open

When the car descends a hill, at, say 20 miles an hour, with the Governor lever set at 15 miles an hour, the throttle is held automatically closed so long as the speed exceeds 15 miles an hour. This results in a marked saving of fuel and avoids popping in the exhaust when descending hills. This is one of the features which contribute to the unusual economy of Rolls-Royce cars, enabling them to do from 11 to 14 miles to the gallon of gasoline.

ROLLS-ROYCE

No Rolls-Royce has ever worn out

When starting from rest there is no need under any conditions to race the Rolls-Royce engine, because, as soon as the clutch is let in, and power demanded from the engine, the throttle is automatically opened wide by the Centrifugal Governor and the engine caused to develop its maximum power and speed at which it is set.

What Will the Automotive Trade Be Doing

When 43 Legislatures Convene Next Month?

It's Time to Get Together to Promote and Protect That Great Utility—Transportation—This Story Suggests Some Things That Dealers Can Do

By NEAL G. ADAIR

FORTY-THREE Legislatures are going to begin about a month from now considering legislation that affects the automotive trade. How do we know? Forty-three Legislatures are going to convene soon after the first of the year and who ever heard of a legislative session without automotive legislation?

It just isn't done, that's all. The automobile, its manufacture, sale and use, have been for years subjects of special legislation. Nor is any change in sight. In fact, keen students of the legislative mind predict that the next ten years will be the most critical, from a legislative standpoint, in the history of the industry.

Yet in how many States have automotive men united to promote and protect their interests before the Legislature? There are a few State dealer associations which maintain legislative committees working more or less effectively in promoting good and restraining bad legislation. In some States which have no State-wide dealer associations informal groups of dealers have been formed to watch legislation. In very few States is there a powerful agency—as there should be in every State—composed of automotive manufacturing, automotive merchandising and automotive vehicle using interests working together to see that the automobile gets a fair share with other utilities in public improvements and that it is not victimized by class legislation.

Early in August Motor World commented on probable classes of legislation affecting the automotive trade and urged study and action by dealers to prevent discrimination against their businesses and their products. We hope the suggestions made then prompted steps in some states toward organization. Now we are within a month of the convening of nearly all the legislatures and it seems timely to call again to the attention of the trade what it can do for itself while senators and representatives are grinding out the annual grist of new laws.

The first essential is organization.

The most farsighted and most energetic dealer cannot, alone, accomplish anything along legislative lines. It is an organization task.

Co-operation Is Necessary

It is equally futile for dealers, even if well organized, to go it alone in legislative affairs. They should work with the automotive manufacturing interests, if there are any in the state, and also with the powerful owner group, the people who own and drive cars and trucks.

California is a shining example of preparedness to fight the industry's legislative battles. In that state there is an Automotive Conference, composed of representatives of organized manufacturers, dealers and owners, which holds a legislative convention several weeks before the law-making body convenes. This Conference adopts a program for the legislative session, recommending some laws and changes in laws and determining beforehand where it will stand on various classes of legislation initiated outside its own organization. When the Legislature convenes, committees of the Conference are ready to present the views of manufacturers, dealers and owners as a single, definite view. The effect of such a presentation, of a united, powerful front, can readily be imagined.

In New Jersey the Good Roads Association, which recently promoted successfully a $40,000,000 highway bond issue referendum, is about to consider its legislative program. This association includes representatives of manufacturers, dealers and owners and will be prepared also to work as a single organization on questions that come before the Legislature.

What the Problems Are

Automotive men looking forward to participation in legislative affairs would do well, in considering their local problems, to give some thought to the general line of thought that is running through the minds of legislators all over the country. In the main it may be said that legislators are thinking along five principal lines, which cover these subjects:

Taxation.
Restrictions on the size and weight of loads.
Rules of the road.
Compulsory insurance.
Common carrier legislation.

Let's look into these subjects, one at a time, and try to determine where the trade should stand regarding them.

Taxation of automotive vehicles is necessary and good public policy. Everybody recognizes that. The question is, how shall they be taxed and how much?

In some States it has been the habit of the automotive trade to fight any and every new tax bill. This has had the effect of antagonizing legislators and creating unfavorable public opinion for the industry. What should be done is to investigate the need for the proposed tax and, if it is needed, help its proponents levy it in a scientific manner.

There has been quite a bit of agitation by the trade here and there in favor of gasoline taxes. As a matter of fact, such a tax would distribute the tax burden more evenly among motor vehicles than some forms of assessment now

Digitized by Google

in vogue, but the gasoline tax as an *additional tax*, with various license fees also prevailing, may impose an unfair levy on users of cars and trucks and so make the dealer's business more difficult by increasing sales resistance.

In any State where taxation is to be a legislative issue the men in the industry should get together now to determine what revenues should be raised and how the process can be most equitably applied.

There is no need of guesswork in such an inquiry. It is generally conceded by well informed persons that highway building should be financed by the public at large, with some assistance from abutting property owners, and that highway maintenance funds should come from users of the highways, largely car and truck owners. It is just as reasonable that the public should bear the burden of highway construction—and it should be remembered that car and truck owners themselves form a large part of the general taxpaying public—as it is that society at large should finance education. Both education and transportation are essential to progress, both are utilities of the first order.

Maintenance Needs Defining

In addition, however, to bringing about recognition of the public responsibility for the construction of highways, it is necessary to get a correct definition of maintenance. In some States where officials recognize highway building as a general tax some building and rebuilding undertakings are juggled into the maintenance account, thus throwing the burden on the car and truck user. The cost of actual maintenance of roads already built, including administration and the expense of administering motor vehicle registration and traffic control, is a legitimate maintenance charge and will represent in any State what should be raised by taxation of the motor vehicle owning public. If highway maintenance and administration is going to cost a State a million dollars next year and the motor vehicle licenses and kindred forms of taxation will yield a million or a little more it is obvious that an additional tax of any kind is not justified and if the facts are properly presented to the Legislature and the public it is not likely that legislative opinion will approve nor public opinion permit passage of a tax increase law. In one large State last winter the automotive interests brought about the defeat of bills levying additional motor vehicle taxes, including an all but prohibitive levy on trucks, by showing the legislators and the people that the revenues already available were sufficient. In some States it may be advisable to change the system of taxing motor vehicles. The trade should not blindly oppose such a change because it is a change and perhaps looks on the surface like another attempt to bleed the motorist and truck owner, but should set intelligent committees to work with the legislative and highway officials to bring about the changes in a manner equitable to everybody concerned.

In several States bills are likely to be introduced restricting weights and sizes of vehicles and their loads. Some restriction is necessary else motor trucks will destroy highways, injuring their own and the motor car's interests as well as the public's. But there is a reasonable limit to restrictions. Some legislators have been decidedly unreasonable in their attitude toward truck loads. Others have seemed to be unreasonable because they lacked definite information to proceed along sensible lines. There is a central point of information and advice in the Motor Vehicle Conference Committee, with headquarters in New York. The committee has worked out an elaborate schedule of recommended truck weights and sizes which can be had for the asking.

Rules of the road, including speed limits and varied forms of regulation having to do with traffic control may be the subject of legislation. Rules of the road may be so restrictive and rigid as to discourage motor car and truck use and thus set up a serious factor of sales resistance. They should be so drafted as to provide for prompt and regular movement of vehicles at speeds in keeping with their capabilities and at the same time recognizing the factor of safety, for motorists and pedestrians alike. Some States have capable men, some of them with engineering ability, directing the preparation of traffic control regulations. Other States might well employ such men, and the automotive trade can encourage action along this line.

The subject of compulsory liability insurance for the car and truck owner, which has been coming to the front within the past two or three years, is closely associated with traffic regulation. Highway accidents caused by motor vehicles have reached such proportions that a considerable element of the public is demanding legislation which will insure financial responsibility on the part of a driver to pay for personal or property injury resulting from his recklessness.

There are men in the industry who believe that compulsory liability insurance is bound to come. But they argue that everything possible should be done in the building of additional and better highways and in more scientific control of traffic, so that the rates may be kept down by holding down the number of accidents. In any State where the subject is brought up it should have the closest attention of the automotive trade. If conditions in any locality justify the enactment of a compulsory insurance law it should be framed with the utmost care, else the expansion of the industry will be dealt a severe blow through the setting up of an arbitrary discouragement of motor vehicle use.

Common carrier legislation, affecting motor vehicles which transport persons or freight for hire, is under discussion in virtually all States. Some authorities favor putting such vehicles under State commissions regulating fares, schedules and service to the public in general, in much the same fashion as railroad and trolley service is regulated. Others oppose such supervision. Local judgment must be applied. And in such application the automotive industry, with its expert knowledge of motor transportation, should be a factor.

Trade Can Get a Hearing

The automotive trade can get a hearing on all questions affecting the sale and use of motor vehicles if the men in the trade will demand it. They should demand such a hearing and be ready to use it intelligently when these forty-three Legislatures convene in the next few weeks. There is no need to go before State authorities as a suppliant, nor is a fighting attitude any more effective. It should be remembered that the majority of legislators are honest but that they have to deal with hundreds of subjects of which they have no personal knowledge. They will welcome fair, sound advice and on many subjects automotive men are particularly fitted to advise them.

In New York, at headquarters of the National Automobile Chamber of Commerce, there is an organization of the motor vehicle manufacturing, merchandising and using interests equipped to guide State organizations in legislative questions. It is the Motor Vehicle Conference Committee. Its officers stand ready to advise and assist groups of manufacturers, dealers, or owners anywhere in their public problems. If manufacturers, dealers and owners out in the separate States will do their part, uniting, as they can and should, for the promotion and protection of the automotive vehicle as a great public utility, the problem will be considerably simplified.

The Legislature in YOUR State will be assembling next month. It is going to do things of vital concern to your business. And your business *is your business*. Organize NOW to give it a fair chance to live and grow.

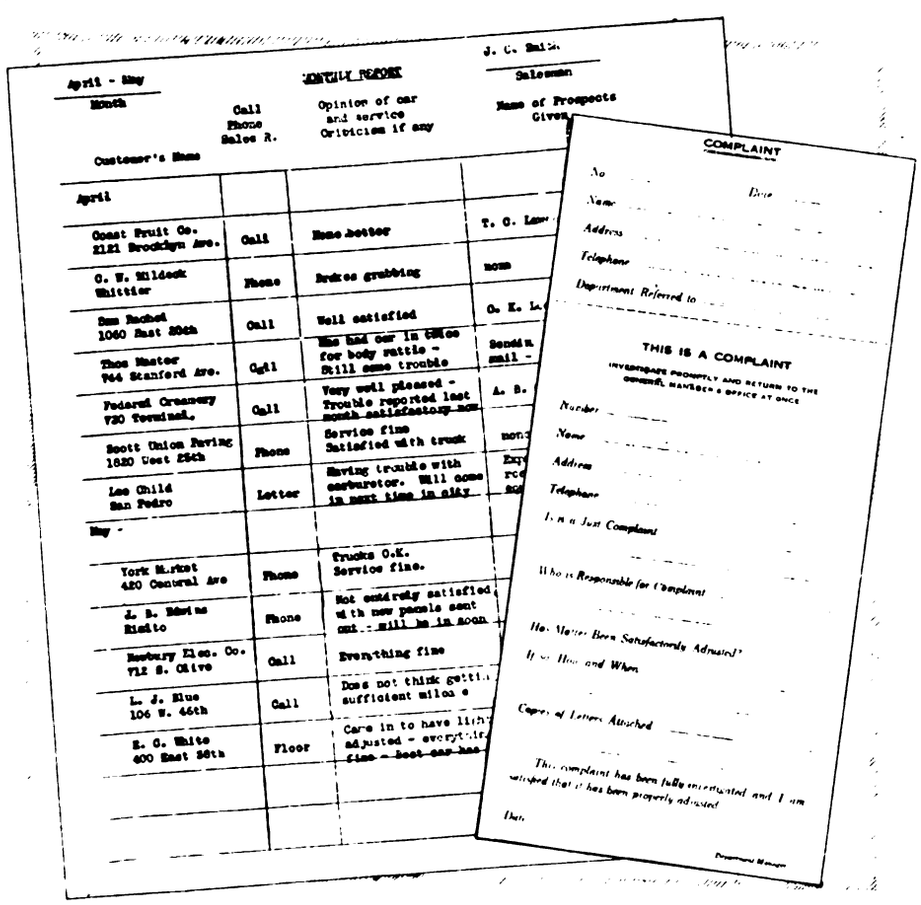
Follow Through System for Sales Staff Keeps Customers Sold

Los Angeles Dealer Has Salesmen Call on Customers Once Each Month—All Complaints and Dissatisfaction Followed Up and Adjusted

"SMITH, if you ever purchase a car don't get a ———. I have had this 'can' less than five months and all it has been is a pack of trouble. It's the most overgrown lemon that ever crept on the market."



"Why don't you take it down to the place where you bought it and tell them about it?" asked Smith.

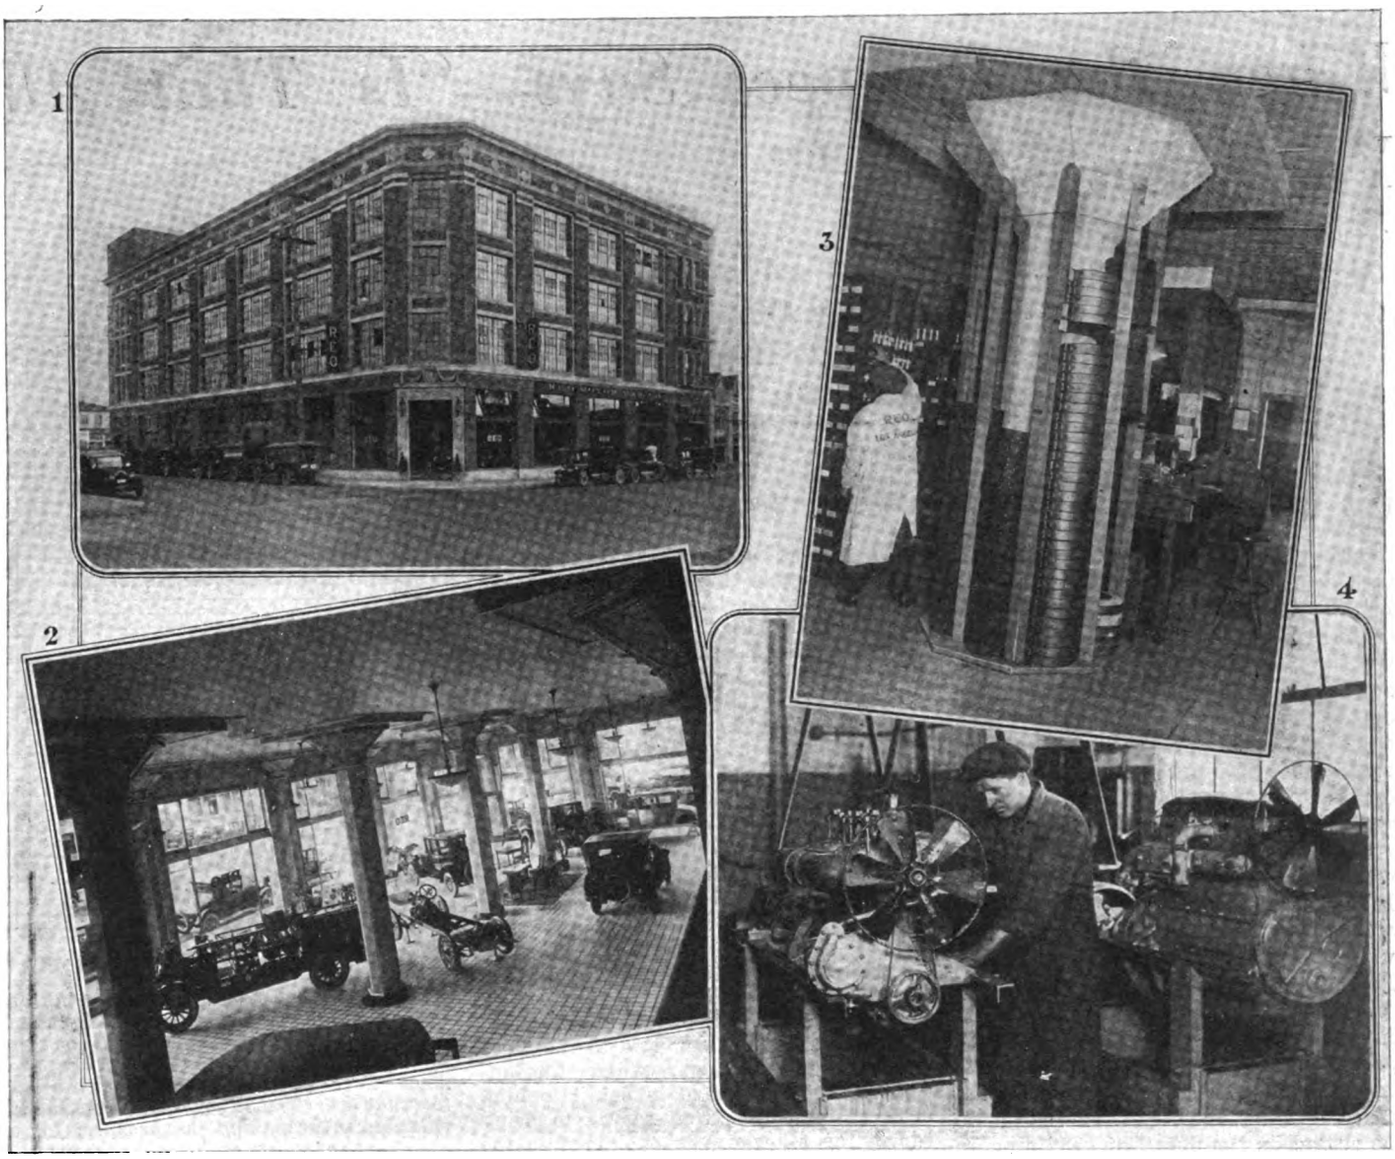
"What's the use," he grumbled. "Once they get your money, they're through with you. If I took the car down they would probably soak me a couple of hundred dollars more to fix it up."

"I guess you're right," said Smith.

The dealer who sold this man not only has one deep-seated enemy in his trading territory, but he probably has many others—all because he hasn't kept close to his customers.

IT is a safe bet that the trouble with the car in question was nothing more serious than dragging brakes. A few minutes' work by a mechanic adjusting the brakes would have turned this customer's grouch into a smile.

The report form on the left is used by salesmen to record their calls on owners. All owners must be reached at least once each month. The complaint record on the right assists in following up and smoothing out dissatisfaction



It is only human nature for a prospective purchaser of an automobile to seek the counsel and advice of persons already owning cars of a make in which he may be interested. And nine times out of ten, if present owners knock their cars, the prospect turns his attention to other makes.

Making every owner a booster is the purpose of the thorough and efficient system of owner follow-up being used by the Reo Motor Car Co. of Los Angeles, Cal. After a person buys a car or truck from this company, he receives a call from the salesman who sold him, or from some other representative of the company, every thirty days during the entire time he owns the car. After a car or truck is sold, the customer's name, address and telephone number is practically charged against the salesman's account. In other words, the company makes the salesman immediately responsible for the customer as soon as the car or truck is delivered.

On the first of every month the accounting department submits a monthly report form to all the salesmen, giving them a list of names and addresses of all persons to whom they have sold vehicles. If the customer purchased his car a year or two ago, his name still appears on the "checking up list," providing the owner is still operating the car in the trading territory served by the Los Angeles company. It is up to each salesman to communicate with each of his owners every month to ascertain if they are fully satisfied with the vehicle purchased, service rendered, and if their investment is proving up to their expectations. The salesman must either make a personal call, telephone or talk to the customer in some manner every thirty days.

The reports on customers must be

Digitized by Google

1—The fine new building recently erected by the Reo Motor Car Co. of Los Angeles. 2—The light and spacious salesroom. 3—An unusual method of storing brake lining and brake bands. The space occupied is a minimum. 4—Running-in stands for rebuilt engines. It is easier to keep customers satisfied with a well-equipped shop

turned in by the salesmen by the first of each month. Before the salary checks are issued to the salesmen, an examination of the reports is made to determine if they have been completely filled out. Failure to get in touch with any customer, save for a sufficiently good reason (such as customer being out of town) means the pay check of the salesman is held up until his report is complete.

The system used by the Reo company eliminates the possibility of a customer being "sore" and keeping cause of his ill-feeling to himself. Second, it gives this organization an opportunity to make certain that the customers get satisfactory service. Third, it enables the company to gain additional new prospects each month from the customers, as the salesmen are instructed to inquire each month upon each call whether the customer knows of anyone who may be in the market for a car.

The Los Angeles company has an unusually thorough system for handling the complaints. Each salesman is required to carry a pad of complaint slips with him at all times. These pads are also hung up in all prominent places about the dealer establishment, so they may be readily available at all times for salesmen to take down any complaints that may be made by customers. On any complaint that is heard by any member of the organization a complaint slip is made out and passed on to the manager's office. If any complaints are received through the mail, a complaint slip is filled out with the gist of the information contained in the letter and sent to the manager's office.

Complaints Handled First

Manager Foy detaches the top of the complaint slip, which also contains spaces for the name, address and telephone number of the owner complaining, and the department the complaint is to be referred to. The manager then sends the main slip, giving the complaint in detail, to the department concerned. When the complaint has been thoroughly investigated and satisfied, the original slip with the copies of any letters that may be involved attached, is returned to the manager's desk, and he in turn communicates with the customer by visit, telephone or letter, and assures himself that the complaint is satisfactorily settled to all concerned.

No matter what the volume of other business details awaiting attention may be, complaints get attention first.

When investigation of a complaint reveals that the house is at fault, naturally the house makes things right without any charge to the customer. But when it is apparent the owner is at fault, the owner pays for the service rendered. The fact that the owner may have to pay to correct the trouble that has developed with his machine does not cause him to retain his grouch if he is properly handled. It is on this score that business diplomacy must enter.

When the Prospect Says—"Is That All You Can Allow!"

How an Appraisal Report Is Used to Prepare the Customer for a Low Offer on His Old Car—A Plan for Handling Prospect Cards

ONLY $200 for that car in a trade in—I expected you to offer me at least $500!

It's an old, old story. How many times each week does a dealer who has led his prospect step by step to a point of burning enthusiasm for a new car, see that warm enthusiasm frozen into solid sales resistance at the mention of the used car appraisal figure?

Probably the prospect for months has been thinking about buying a new car and for months he has told himself over and over again, "The old bus surely will bring $500, maybe I can wheedle out $150 more on a good deal." In the meantime the old "bus" has steadily depreciated through age and wear. Put yourself in his own shoes. Pretty tough, isn't it? You've led him on and on until in his heart is a burning desire to sit behind the wheel of your bright, new, sweet running new car creation as its owner. He has decided he must have it. All that is to be settled is the detail of swapping in the old car.

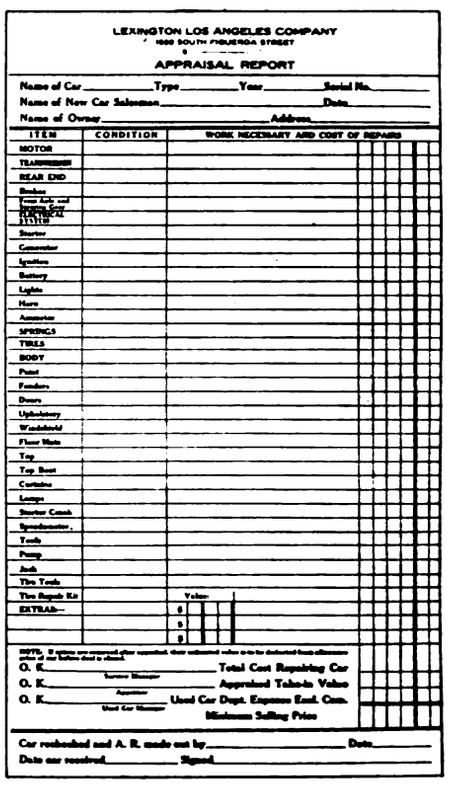
And then—out of the blue sky, without a word of preparation of softening the blow, the prospect hears the "sad news"—only $200.

It's pretty cruel treatment some prospects will tell you. The cooling off process takes as many forms as there are personalities. Some prospects sizzle and protest and fume, like a glowing bolt of iron thrust into the blacksmith's water barrel. In some prospects the glow of enthusiasm just fades gradually like a coal plucked from the fire. And in some the change is hardly perceptible until the atmosphere reflects it, like your steam radiator when the fire burns out.

Disappointed Prospects

So long as dealers trade in used cars, they're going to disappoint many prospects, but there are some who believe that the process of leading the customer down to a reasonable figure on his "old bus" may be made much less painful. When the procedure is made as painless as possible there is just so much less development of sales resistance.

Interesting among the plans of some dealers for making appraisals painless is the one used by the Lexington Los Angeles Co. When a car is turned in for appraisal here the service department makes a thorough examination covering twenty-three different items as follows: Engine, transmission, rear end, brakes, front axle and steering gear, electrical system, starter, generator, ignition, battery, lights, horn, ammeter, springs, tires, body, paint, fenders, doors, upholstery, windshield, floor mats, top, top boot, curtains, lamps, starter crank, speedometer, tools, pump, jack, tire tools, tire repair kit. The appraiser must make a notation in each instance as to the condition of every item and the work necessary and cost of repairs. The cost of all repairs is totaled when the examination is finished.



Sales Manager Gives Report

When the owner comes to inquire as to the allowance, he is invited to the office of the sales manager where the appraisal report is read in detail to him. Every single item that served to bring down the allowance is explained to the owner, and when he is finally informed as to the take-in value, he is in a much more receptive frame of mind to hear a figure considerably lower than his expectations than if the figure were quoted to him by a salesman without analyzing the appraiser's report.

These reports generally are given to the prospective trader by the sales manager. But, whether the sales manager or the salesman meets the customer, the appraisal report is used and care is taken not to kill the prospect's enthusiasm for the new car by the bluntness of the trade-in appraisal.

Besides the psychological effect that this presentation of the appraisal figure has on the prospect there is another very important phase to the arrival at trade-in figures through this method. It is in the systematic handling of appraisals which guards the dealer against some of the "wild" deals he may be led into through his enthusiasm to make the deal.

With the use of the appraisal report in the manner described there is much less danger of the prospect carrying the deal his way because of the defensive position he is in. At the same time the dealer, with the complete appraisal report before him, is less liable to weaken in his position and succumb to prospect's selling of the old car.

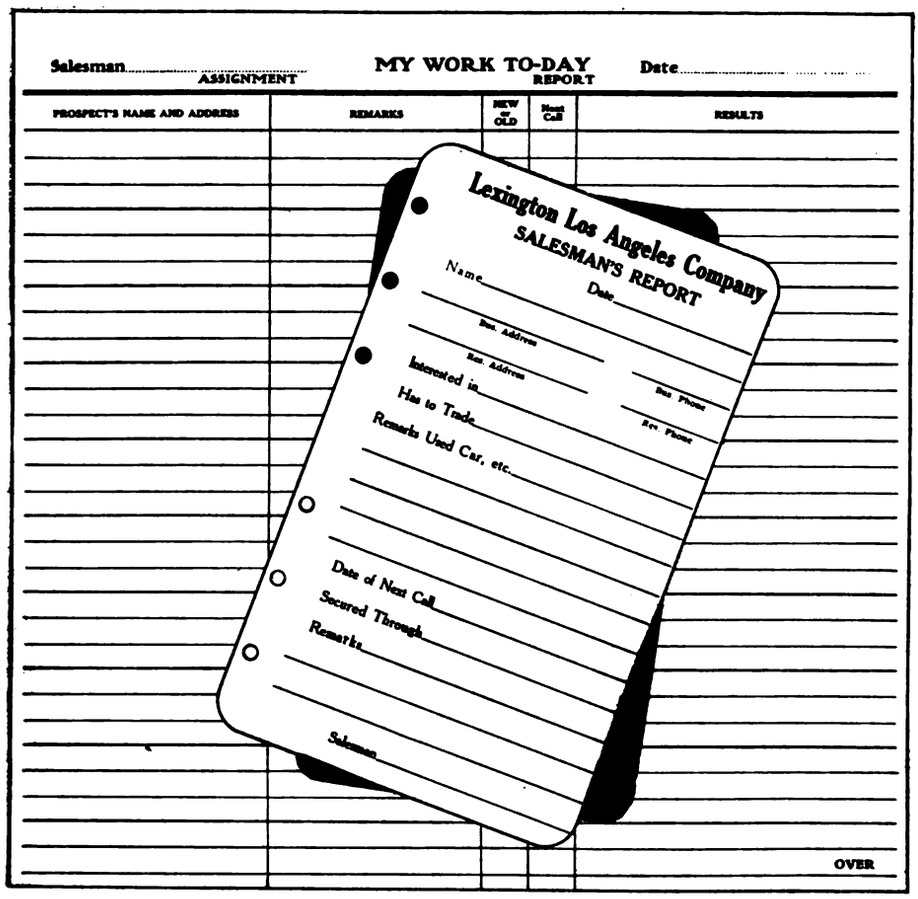
The Appraisal Report



This is the report used by the Lexington Los Angeles Co. It is completely filled in in the service department and goes to the salesmanager who "breaks the sad news" to the new car prospect with a car to trade in. The report has been found valuable in preparing the prospect for a sane value on his old car

Another feature of the Lexington Los Angeles Co. selling plan is the systematic gathering of the names of prospects and the systematic cultivation of these. In the opinion of William Middleton, sales chief, enforced thoroughness should be the all important consideration in a successful prospect system. Without a plan that calls for a constant check on the prospect's frame of mind and the salesman's activities in encouraging an early decision in favor of the car he handles, there is bound to be business lost to competitors. How Middleton obtains thoroughness in his prospect system is of interest to other sales managers.

Handling Prospects

When a new prospect is turned in, either by a salesman or from some other source, it is immediately listed on a report card giving complete information as to name, business and residence address and telephone number; type of car interested in; whether a trade-in is likely; any criticism he may have voiced

Digitized by Google

These are the assignment form and the salesman's report which are important in the method of recording and following up prospects used by the Lexington Los Angeles Co.

against the car handled; remarks made upon conclusion of meeting with salesman. One of these cards is maintained by the salesman and a duplicate is held in the files of the office of the sales manager.

On each card, a definite date must be set by the salesman for a "next call" on the prospect, in order that this card will automatically come to the attention of the sales manager on a certain day. At the beginning of each day the salesmen receive a sheet from the office of the sales manager, headed "My Work To-day." On this sheet are listed the names and addresses of the prospects carried in the files. At the close of the day the salesmen must return this "My Work To-day" sheet to the sales manager with a brief resume of the meeting with the prospect or the reason for failure to interview him. He must also fix a definite date for a "next call" in order that the prospect's name will appear on his work sheet at a later date. Not until a sale is completed or the sales manager definitely concludes, after talking with the salesman, that a prospect is hopeless, is the name killed.

In the gathering of prospects, Middleton has found Lexington owners one of the most prolific sources of warm tips. At various intervals Middleton dictates semi-form letters to Lexington owners, inquiring as to how their cars are operating and incidentally (usually in the last paragraph) voicing appreciation for the names of "Any friends or business acquaintances you think may be interested in a Lexington."

Choosing a Name for Your Business

CHOOSING a name for your business is a very important consideration; the success of your firm name is precisely the success of your business—no more, no less—ofttimes.

A name can be a handicap or a stimulator. To select a name that cannot be punned by similarities, parodied by jest or reduced to ridicule by abbreviation is not an easy task. It is easier to make a business successful with a good name than successful in spite of its name.

It is not at all uncommon to find a store called somebody's "place," such as "Jake's Place." This is no reflection upon the conduct of any business so unfortunately labeled, but it must not be forgotten that in the days of the saloon, it was not the respectable, well conducted saloons that were called "places."

Two men start in business, Dick Harris and Tom Handy. They call their store "Dick and Tom's." Does it sound better than Harris & Handy? The men say they are known about town by their given names and merely are capitalizing upon their acquaintance. Perhaps upon first thought they are right, but isn't it a fact that you don't look for the high grade establishment at Dick and Tom's that you expect to find at Harris & Handy's?

A firm is organized to take on the Sennett car. The principal stockholders are Smith, Jones, Robbins and Clark. Yet they cannot incorporate all four names into the firm name, so they call it the Sennett Sales Co.

Too Many "Sales" Companies

There are a thousand and one "sales" companies, yet there are those who are beginning to feel that the word "sales" cheapens the title. Concerns whose business leans toward brokerage, whose function suggests more of the middleman, often style themselves as "sales" companies. Auction houses and specialists in bankrupt stocks use it.

There is also danger in naming your company after the car you handle. In the first place, you eventually may drop the line or have your contract cancelled, whereupon you instantly lose the prestige that your name has quietly built up during the several years and it ceases to have any value in its association.

Second, on the books at the Sennett factory are dozens of Sennett agency organizations—the Sennett Motor Co., the Sennett Auto Co. or the Sennett Distributing Co. You and your Sennett Sales Co. to some extent lose your identity. Clerks in the factory parts department sometimes get your orders mixed up. Sometimes entries are posted to the wrong accounts.

The best name on earth is your own name if you own the business. A change in lines or agencies costs you nothing in good-will, but your own name applied to the business leaves the personality feature undisturbed.

If it is a partnership or a corporation, you can always find a good name that will survive all changes. It will even protect you against a change in partners and stockholders.

Great caution must be used, therefore, in selecting a name. The item of good-will for which a buyer pays a bonus frequently when purchasing four walls and a stock of merchandise is the value of the name.

Were it not for the fact that agencies and dealers change so much, there is not a great deal to be said against adopting the manufacturer's name, when weighed against the advertising the car gets whenever the dealer's name is mentioned, but since it is a fact that this change is constantly taking place, great care should be used.

Successful retail merchandising is the product of a combination where the dealer's reputation locally is as good as the manufacturer's is nationally.

Why work hard to make a reputation and stand the chance of having your name wiped out by some difference of opinion with some maker? Think of these things when choosing a firm name.

ON this page is a statement regarding the used car question by one of the leaders in the automotive industry. It shows a keen appreciation of the fact that the industry as a whole must concern itself with the improvement of conditions. We believe every automotive man will want to read what Alvan Macauley of Packard has to say about used cars. We hope his comments may start a helpful discussion.

Used Cars the Industry's Most Serious Issue

By ALVAN MACAULEY
President, Packard Motor Car Co.

THE used car problem is the most serious issue now before the motor car industry. It need hardly be explained that by the "used car problem" I refer to the prevailing methods and practices of handling sales involving trades and of disposing later of the replaced vehicles.

Six or eight months ago, when trade conditions were stagnant and thousands of replaced cars were choking the channels of distribution, everyone was discussing this situation; they were compelled to do so.

When business revived and the distribution of these cars began to get under way we allowed ourselves to believe that the replacement problem was in process of being solved.

In my opinion, *the used car is as much of an issue in the prosperous present as it ever was.* Stated in figures of the current year it is probable that half of this year's sales have been made and are being made on the basis of trades. The percentage of trades may be as low as 40 or it may run as high as 65 per cent. Several persons of wide experience in the industry have assured me that the latter figure is more nearly accurate.

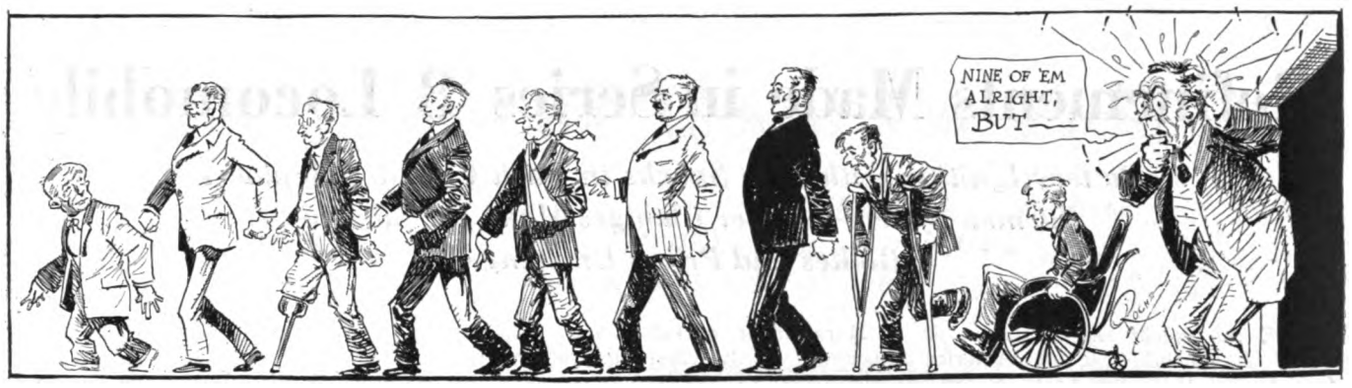
IF the production of new motor vehicles of all kinds this year will approximate a total of 2,400,000, as it is now believed, and since sales are keeping pace with production, it is apparent that the used or replaced car problem is one of huge dimensions.

However, the greatest menace in the situation is not the size of the problem, but the fact that the unsound economic methods which have governed the sale of used vehicles in the past are still the governing factor to-day as heretofore. Used cars are being sold without regard to the overhead cost. Used cars are being accepted on an extravagant basis of valuation.

The overhead cost of selling a used vehicle, according to prevailing experience, is hardly less than the cost of selling a new vehicle. Counting the labor necessary to put the replaced car into a salable condition the average overhead of such sales is certainly not less than 10 per cent. Nevertheless, it is not an exaggeration to say that except in a very small percentage of cases the used or replaced vehicle is sold quite regardless of this.

On the score of valuation most observers agree that the case is as bad. I have heard various estimates from competent persons. On the whole, I believe that the average valuation allowance is about $300 and that the average loss in closing out these vehicles will run not less than 10 per cent. In other words, the prevailing practice is such that there is being incurred in all used car transactions a valuation loss of at least 10 per cent and another loss of 10 per cent more due to the non-accounting of overhead costs. The figures covering the situation are interesting.

Number of new motor vehicles sold in 1922 (partly estimated)	2,400,000
Percentage of sales involving trades	50%
Number of vehicles in trades	1,200,000
Average allowance	$300
Total amount of allowance	$360,000,000
Selling cost of used cars	10%
Total amount of selling cost	$36,000,000
Percentage of loss on trade-in sales in addition to selling cost	10%
Amount of such loss about	$36,000,000
Total loss on trades	$72,000,000



THESE figures will no doubt be questioned. They are not mine, but they have been drawn from competent sources and I believe that on a whole they reflect the situation as it is.

However one may discount them, it is obvious that the present method of handling the used car is still a very serious burden to the motor car industry. For the moment it is being carried with some degree of ease because consumer demand is considerable and profits throughout the industry are satisfactory. It is, nevertheless, a burden. It is more than that. It is a huge item of waste which in some way must be eliminated. Under less favorable conditions than those at present prevailing, it may prove such a handicap to the industry as to check its development and bring serious distress to a considerable number of those who are devoting their energies to its upbuilding.

The conclusions implied in this exhibit are that sales replacement vehicles are being handled without due regard to the actual overhead costs; that these vehicles are being accepted on an extravagant basis of valuation; that there is a loss of many millions of dollars in this phase of distribution—on the basis of the figures cited this loss being upward of seventy million dollars — and finally that this evil condition is the basis of 50 *per cent of the sales of new vehicles made in a prosperous year.*

IT will, perhaps, be sufficient at this time merely to state the crude facts in the case. Certainly they are startling enough to give any one cause for thought. Something can be said as to the responsibility of this situation—much more as to what can be done to remedy it. But first of all the problem must be seen in its full outlines and recognized for what it is—the most serious issue confronting our industry.

The Nine-Hour Day

By NEAL G. ADAIR

"KNOW anybody that wants to buy a repair business?"

"Whose?"

"Mine."

"What's the matter with it?"

Henry Bennett, Redman dealer, began the conversation, hardly taking time for an exchange of "Good Mornings" with his friendly competitor, head of the house of C. J. Reilly, Inc., the Sennett distributor in Callawassa.

Bennett's answer to the last question indicated that he had something sizable on his mind.

"What's the matter with it? What's the matter with any repair business?" the Redman dealer demanded. "Mine's picked my pockets ever since the year one or thereabouts, and I'm through. That's all. I'm through."

"Then why waste conversation on the subject?" Reilly suggested.

"Because you're due to listen to it," Bennett retorted. "I had a notion a year ago and a year before that—you remember—to shut up my shop, farm my policy service out to a good nearby repairman and let my Redman owners go anywhere they want to go, which a lot of them do anyway, for their general repair work. I had the notion and if I'd had some backbone I'd have seen it through, but you—you—"

Bennett spluttered in indignation, and Reilly jumped into the gap in the Redman dealer's flow of words.

"I told you to keep your service. I told you you couldn't sell Redmans and keep 'em sold without it," Reilly replied, "and if you are asking for it, I'm giving you the same advice to-day."

"But I'm not in business to please old man Redman and a lot of folks around here that drive his cars," Bennett said. "I want to make some real money, and I could do it if I could get rid of that confounded loss in the service station. I've got a good man and a good system handling parts and I've cut out the losses we used to have on missing articles. I've got our tools under an honest fellow's eye, too, and they aren't disappearing the way they used to. We're getting bills out and getting 'em paid promptly, but our service station balance at the end of the year is going to be way over on the red side, just as it has been every year. So I'm through. What ails this darn business of ours anyway, Cornelius? The plumbers and carpenters and bricklayers and a lot of other birds get by with their men working only eight hours a day, and we have a nine-hour day, but—"

"But some of the hours are bum hours, that's the sand in the soup," Reilly interrupted.

"How do you get that way—bum hours?" Bennett demanded. "An hour's an hour, isn't it?"

"Except when it's sixty half minutes or something like that," Reilly said.

"I'm no good at riddles," Bennett retorted.

"Then I'll tell you a story," Reilly continued. "A year or so ago I put myself to quite a lot of trouble to get pretty well acquainted with the nine hours that make up the day out in my shop. They turned out to be a rather surprising bunch of guys. Four or five of 'em were big, strapping, husky fellows, but some of the others were not so good. One was only about half grown, kind of a dwarf, you might say. One had a wooden leg. One shagged around on crutches and one—would you believe it?—used a wheel chair."

"Don't you think you ought to have a guardian?" Bennett asked sarcastically.

"Not now, but I did think so when I discovered the kind of hours I'd been paying sixty cents worth of wages for and realized how long I'd been doing it," Reilly replied.

"I suppose I'll have to hear the rest of the story," Bennett said with mock resignation.

"You need to hear it," Reilly asserted. "And here it is. I had always left details of the service job to Healy—good manager, Healy is, too. But he was a little too close to his job. All of us get that way about once in so often. He had a good gang of fellows out in the shop, first class mechanics, none of them what you would call dishonest, but—but—you know how it is.

"I dug a bunch of job cards out of the files one day and spent most of that day and a lot of others going over them, and then one day I called Healy in and asked him how much time he supposed the men used doing little jobs around the shop—picking up discarded parts, putting tools back where they belong and so on. Healy guessed they didn't take more than a few minutes a day, and you could have blown him over with a palm leaf fan when I read off some figures to him. We had ten men in the shop at the time. We were paying them for nine hours of labor a day, but every day there were four or five hours—twenty or thirty hours a week—that weren't charged to customers or used car reconditioning or anything that we got any money out of. Service station profits—gone!"

"The sons of guns. I wonder if my men—" Bennett began.

"Don't start blaming your men; take a shot at yourself while I finish the story," Reilly broke in.

"Healy and I had quite a bit of conversation," the Sennett distributor continued, "and though he was dumbfounded to know how the little off moments of a man here and another there had piled up, I couldn't blame him much. He was kept pretty well on the go routing jobs and supervising them and giving advice on knotty repair problems here and there, and he couldn't always notice when a man dawdled around fifteen or twenty minutes before he really began to work in the morning or killed a few minutes between jobs or started to get ready to go home a quarter of an hour before six o'clock. With the job card system the man's time had to be recorded, of course, so these crippled hours were charged as shop hours. We still have too many of them, I suppose, but they don't stack up the way they did, because Healy watches 'em like a hawk and the men know it. And Healy's going to keep right on watching 'em because he knows I'm interested."

"Expensive luxury, isn't it—loafing?" Bennett commented.

"Especially when the big boss is one of the loafers," said Reilly.

A couple of months later, at a dealer association dinner, Reilly had to dodge a well aimed roll when he asked if Bennett's repair business was still for sale.

Refinements Made in Series 8 Locomobile

Battery Ignition with Two Sparks in Each Cylinder Replaces Former System—Other Changes Make for Silence—Bodies and Prices Unchanged

SINCE the recent reorganization of the Locomobile Co. of America under the leadership of W. C. Durant, a new series of Locomobiles, known as Series 8, has been announced. The general features of the car remain the same, but important changes have been made in numerous details. It may here be recalled that some of the characteristic features of the Locomobile are the six-cylinder, low speed, side valve engine, with a bronze crankcase and cylinders cast in pairs; a full-floating rear axle with radius rods and torque arm, and double brake drums on the rear wheels.

A change of considerable importance is the adoption of battery instead of magneto ignition. The system adopted is the Delco dual system, consisting of two independent units, each with its own coil, breaker and distributor. With this system two sparks are produced in each cylinder at different points of the combustion chamber, thus ensuring more rapid completion of the process of combustion and adding to the power and economy of the engine. The two sparks are purposely not synchronized, that over the exhaust valve being set to occur from 5 to 7 deg. earlier than that over the inlet valve, this having been found to prevent detonation. A wider speed range on high gear and more silent operation are claimed as other advantages resulting from the use of the new ignition system.

More silent operation has evidently been one of the chief aims of the Locomobile engineers in revising the design of the car, for most of the important changes have some bearing on this feature. Thus a new camshaft drive has been adopted, comprising camshaft gears of a new non-metallic material known as Textoil, manufactured by the General Electric Co. The cams have also been redesigned, and the pitch of the inclines so altered that their operation is noiseless at all engine speeds, it is claimed. The spiral angle of the camshaft gears has been increased materially, to 28 degrees.

Numerous minor changes have also been made in the engine. Thus, for instance, the pistons are now given greater relief, and the piston pins are secured in the piston bosses by a single pin screw extending all the way through the piston boss, instead of by two screws, as has been Locomobile practice in the past. The oil reservoir is now cast integral with the engine.

Slight modifications have also been made in the carbureter and its connection to the engine. The inlet manifold is now hot water-jacketed and is so connected to the engine cooling system as to induce a powerful circulation of hot water through the manifold jacket.

The clutch is a new design of the dry disk type, involving a novel principle in that the driving set of disks are made of molded Raybestos and one set of metal disks is eliminated. In order to reduce the pressure on the driving teeth, both the internal and external diameters of the disks have been increased somewhat, and the driving disks are cut with 183 teeth on their outer circumference, with the result that the full load driving pressure on these teeth is only about one-half pound each. There are seven disks to the clutch. Right within the clutch is a Thermoid fabric universal joint which tends to prevent chatter of the clutch due to the periodicity of the universal joints in the final drive. The pressure required to release the clutch has been reduced.

For the gearset the Locomobile Co. has adopted the Maag system of ground gears. These gears are used for the constant mesh, the reverse and the third speed set, the latter being the pair most used of the intermediate gears. A splined shaft has been substituted for the square shaft heretofore used. This splined shaft is ground on the sides and at the bottom of the splines, which, of course, tends to insure accurate mesh of the gears. The direct drive clutch has been changed from a four-tooth to a three-tooth design, the object being to make it possible to grind the engaging faces of the teeth by running a grinding wheel right through between teeth. With the direct drive clutch teeth ground after hardening, there is absolutely no shake in this member. The teeth of the gearset are tested on the Maag tooth outline indicator and must be within 0.002 in. of the correct involute form. The pressure angle of the transmission gears is now 20 deg. instead of 14½ deg., as formerly.

Improved riding qualities are provided by a change in the spring design, whereby an increased number of leaves are provided in the springs. Each front spring has 16 leaves of varying gage, while the lower part of the rear springs has 11 leaves of the same character.

There has been no change in body styles. The chassis price is $6,800, while car prices range from $7,600 for the touring car to $11,000 for the sedan.

Haynes 1923 Model 55 Sport Coupelet, $2,195

This is a three-passenger car carrying full sport equipment including six disk wheels with cord tires 32 x 4½ in., the two extra wheels being mounted on the side to the body at the front. The radiator, cap and head-lamps are nickel plated and other equipment includes visor, bumpers, at front and rear, combination tail light and stop light, etc. The gasoline gage is on the dash

The Wellman Electric Auto Hoist

In the Sept. 27 issue of Motor World, on page 40, we showed an illustration of an automobile hoist installation in the garage of J. E. Sloan Co. of San Jose, Cal. The impression was given in the story that the device was made by the Sloan company, but later information makes it possible to state that the equipment is made by the Auto Palace Sales Co., 1551 Alice Street, Oakland, Cal.

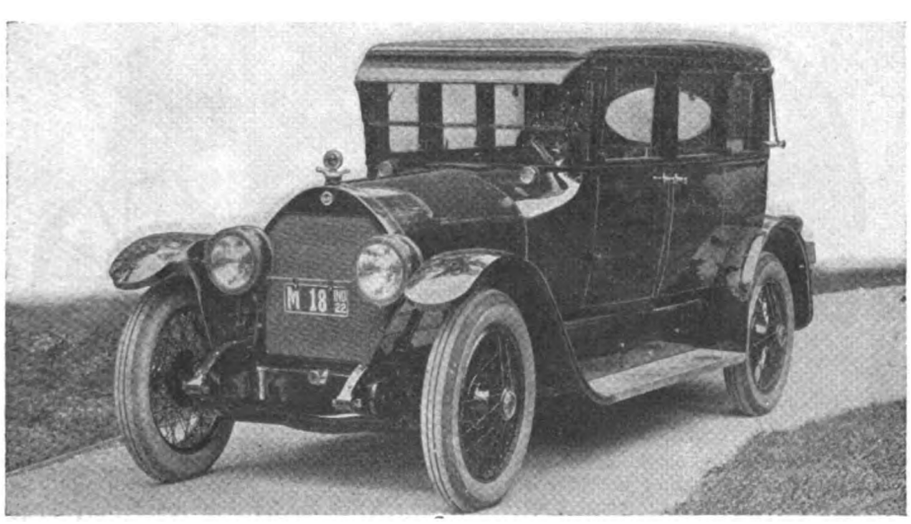
Stutz Enters the Closed Car Field

Touring Sedan and Four-Passenger Coupe Have Very Complete Equipment—Wire Wheels Will Be Used on New Jobs—Sedan Makes Provision for Trunk



FOR the first time in its history, the Stutz Motor Car Co. is producing closed bodies as a regular part of the line. The two models are a touring sedan at $4,450 and a four-passenger coupe at $3,490. The touring sedan carries four passengers and is of a four-door type with square cornered doors. The front doors hinge forward and the tonneau doors hinge at the rear, giving a drawing room effect when the doors are open. The seating arrangement is conventional with a one piece cushion both front and rear, allowing for an extra passenger. The windshield is of the wide vision type, with a leather sun visor. The design provides for a trunk deck and built-in luggage rack in the rear. The upholstery is covered with a special Windsor weave material of strong texture. The springs are Marshall. The body frames are made from ash and elm, and the body to belt line is covered with 14 gage aluminum. Above the belt line it is covered with long grain top leather stretched over a top frame of aeroplane construction.

The door windows are raised and lowered with Ternstedt window regulators. The tonneau windows have lifts of the Dura notch type. The tonneau has foot hassocks built, and doors to these hassocks conceal carrying spaces for jack and tools. The equipment includes dome light, reading light, tonneau entrance lights and mahogany toilet spaces. The coupe is of a four-passenger type and has two full doors which are hinged at the rear.

The seating arrangement is staggered, the driver's seat extending ahead of the passenger seat, which seats two people. One person is accommodated on a single leg auxiliary seat, which folds under the instrument board when not in use. The deck is built similarly to that of the roadster to carry extra tires. A special equipment for spare tires can be set on the rear end of the frame and the trunk, which carries two suitcases, can be put in the deck. There is also a box or compartment directly behind the driver's seat, this being provided with a hinged cover. The compartment extends under the deck and represents a double box, where parts can be put and kept separate from the main compartment back of the driver's seat. The windshield is of the three-piece construction, and the lower glass is of the "jump the fence" type. The car is equipped with a Perfection heater, the operating lever being integral with the heater. It is also equipped with a smoking case.

The Stutz four-passenger coupe, $3,490

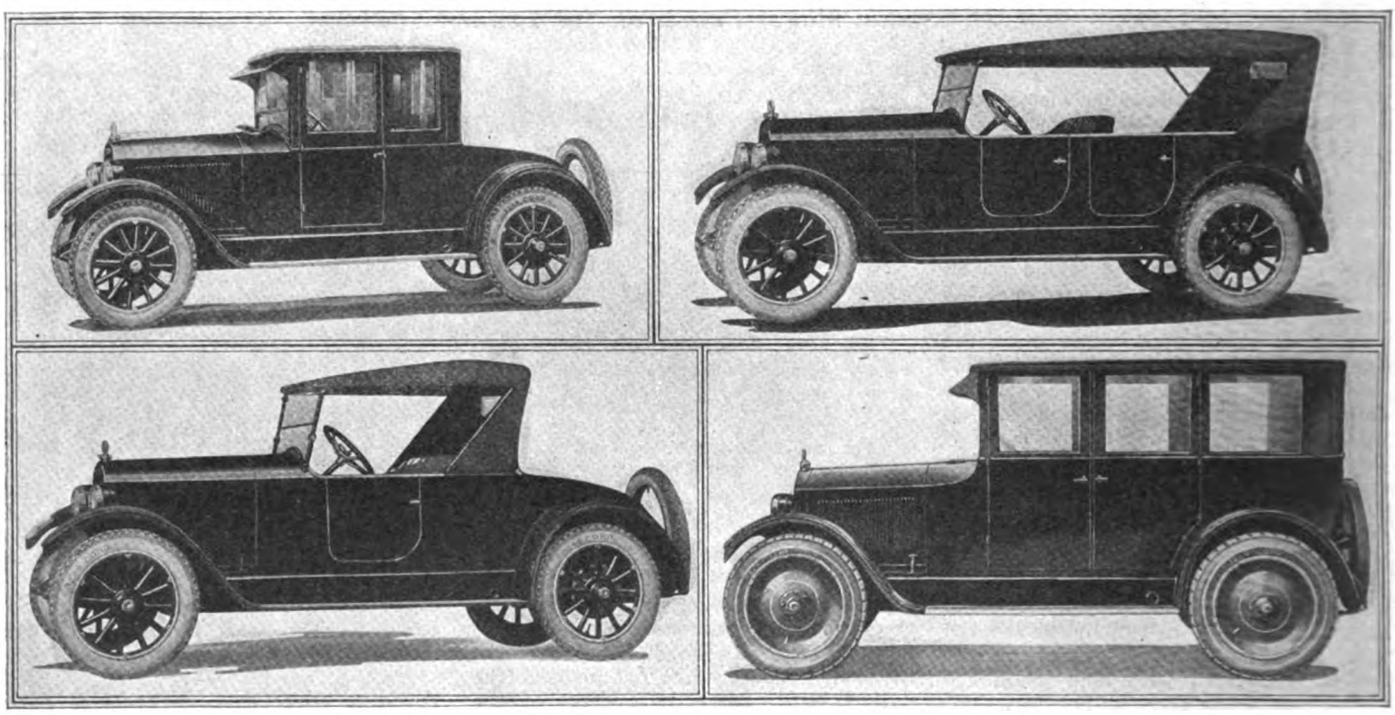
The Stutz touring sedan, $4,450

British Rolls-Royce Brings Out Smaller 20 H.P. Model

The British Rolls-Royce Co. is bringing out for 1923 a smaller model. The bore is 3 in. and the stroke is 4½ in., giving it a piston displacement of but 190 cu. in. for the speed range up to 3000 r.p.m.

One of the outstanding differences between the new engine and the existing model is the use of overhead valves, with heads of high chrome steel. The use of a single block casting for the cylinders is another innovation, and the throttle governor, which is a feature of the large Rolls-Royce, has been omitted from the smaller 20 hp. model, the lever and pedal both acting direct.

The price of the chassis is £1100, as compared with £1850 for the larger model. This new model will not be manufactured in America. The chassis weight is 2020 lb. and wheelbase 129 in.



New Studebaker Big Six Coupe, $2,375

The Studebaker Big Six line has been increased by the addition of a 5-passenger coupé which includes such features as nickel plated front and rear bumpers, automatic windshield wiper, rear view mirror, Moto-Meter and ornamental radiator cap. The coupé has a two-door body and upholstery is in dark brown velour. Equipment includes heater, transmission lock, cowl ventilator, automatic windshield regulators, three-piece rain vision windshield, eight-day clock and a trunk in the rear.

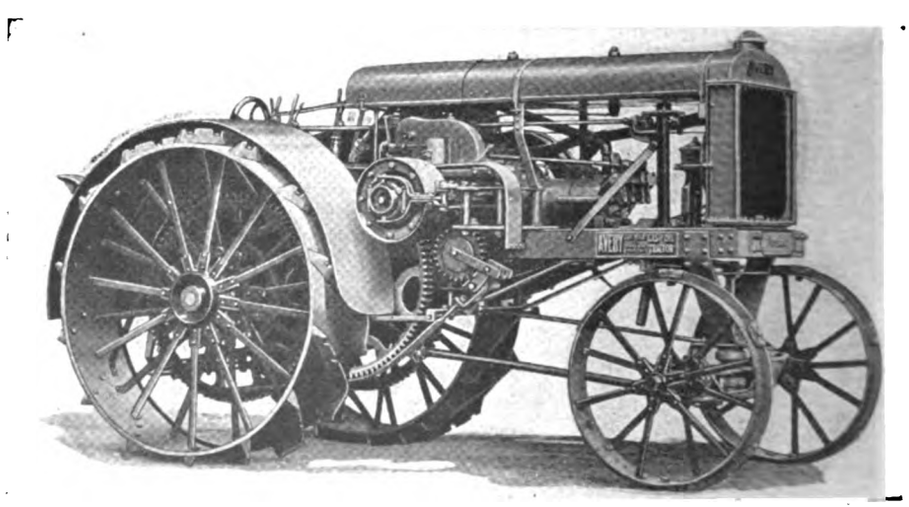
New Gardner 1923 Models Show Many Changes

New Model Lycoming Engine with Greater Power and Refined Chassis Details—Prices Higher



At the upper left is the coupe, **$1,115**; *upper right, the phaeton,* **$965**; *lower left, the roadster,* **$965**, *and lower right, the sedan,* **$1,345**

ANNOUNCEMENT has just been made of the new Gardner models for 1923 which will be powered with a new Lycoming four-cylinder engine recently described in Motor World. The new engine has a bore of 3 11/16 instead of 3½ in. and will develop considerably more power than the old one, which was also of Lycoming make. Other features of the new model include an improved carbureter, a 16-in. four bladed fan, with bronze bearing and thrust washer, a larger (10 in.) Borg & Beck clutch requiring a pedal pressure of only 25 lbs. as against 45 lbs. on the 1922 model, an emergency brake on the gearset, a spoon type emergency brake lever release, larger and improved service brakes, a heavier rear axle, an improved frame front cross member which makes the timing gears and forward end of engine readily accessible, a heavier frame, improved anti-rattle hood catches, genuine leather seat ends in addition to leather cushions and backs, door pocket flaps with metal fillers and improved trimming around the doors.

The total brake frictional area on the new model is 200 sq. in. The method of fastening the top back curtain to the body has been improved, and the muffler has been increased in length and set back further in the chassis, which, together with the fact that the tail pipe extends to the rear, is claimed to insure more quiet operation of the car. The instrument board has been redesigned and the seats have been made lower and deeper, which adds materially to the riding comfort. There is also more leg room in the front compartment, which is secured by extending the front seat back and moving the dashboard forward.

The new model will be furnished in four body styles, roadster **$965**, touring **$965**, coupe **$1,115** and sedan **$1,345**, which represent an increase in price of **$70** on open models and **$20** on closed.

Avery Improved 20-35 Tractor

The substitution of a cellular radiator for the tubular type and the elimination of the cab are the most noticeable changes in the Improved 20-35 *Avery tractor. The cooling system now includes a water pump and a fan. The working parts of the engine are now lubricated by a Madison Kipp mechanical lubricator. The fuel tank runs back from the radiator above the engine. The engine is a four-cylinder double opposed type with cylinder dimensions of* 4⅞ *x* 7 *in.*

Displaying the Car in Winter Settings

SEASONABLE displays always are attractive. Here are three particularly striking examples. At the top is shown a beautiful setting in which an Elgin was shown by the Elgin Motor Car Sales Co., Chicago. The effect accomplished was secured by suspending a gold mesh curtain as the rear setting, which together with colored lighting effects made an unusually attractive scene. This company has contracted with one of the leading theatrical concerns to furnish a setting once each month. In the middle is shown a distinctive salesroom display by the Oldsmobile Branch, Detroit. The oval picture shows a Stutz coupe exhibited in the salesroom of the William Parkinson Motor Sales Co., Broadway, New York

Strong Light Will Make Your Window Displays More Effective

MORE light on your window displays will make more people stop to look at them. That means that the selling messages of your displays are reaching more people. A good display helps to advertise and sell merchandise. A good display well and strongly lighted is of even greater assistance to sales.

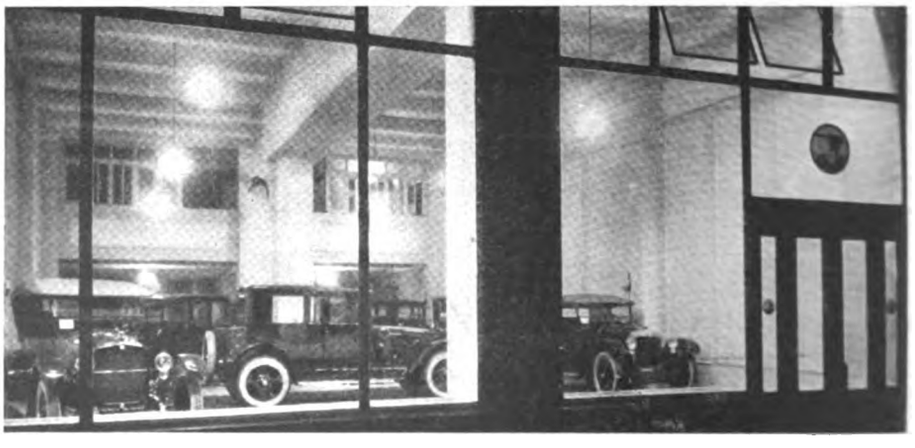
It is rather difficult to measure the effectiveness of a window display. A count of the people who stop to look at the display is probably as good a way as any to make this measurement inasmuch as the purpose of the display is to interest people in the merchandise exhibited. The effect of light intensity on the pulling power of a window display was measured recently by some tests conducted on the windows of a Cleveland store. These tests indicate that the effectiveness of a window display is enhanced by increasing the intensity with which the display is lighted.

Before going further, let us stop to explain what light intensity is and how it is measured. Light intensity is expressed in foot-candles. In a way, foot-candles measure the amount of light. Some idea of the size of a foot-candle may be obtained from the fact that an intensity of from four to six foot-candles is required for comfortable reading.

Two adjacent display windows of similar size were used for the tests. One of them was dressed in an unusually attractive way, and the other contained an ordinary display. These windows were wired so that any one of three light intensities could be obtained in either window by operating switches. The lowest intensity used was about 15 foot-candles which is about three times that required for reading. The other intensities used were 40 and 100 foot-candles which are approximately eight and 20 times respectively the light intensity required for comfortable reading.

The test procedure was to light one window at one of these intensities and to light the other at the next higher or lower intensity. Accurate counts were made of the people stopping to look at each window during the test period. Only those were counted who actually were attracted to such an extent that they either definitely stopped in front of the window or came close to the plate glass and reduced their rate of travel to a slow walk.

The first two tests will illustrate the procedure. In the first test, the ordinary display was lighted at 100 foot-candles and the good display at 40 foot-candles. The duration of this test, as well as the second test, was 45 minutes. During this time, the ordinary display attracted 95 people and the good display 122 people. In other words, the good display attracted about 28 per cent more people than the ordinary one.



The second test was started five minutes after the completion of the first, but, being later in the evening, there were fewer people on the street so the conditions were not exactly the same as during the first test. In this test, the ordinary display was lighted at 40 foot-candles and the good display at 100 foot-candles. The good display attracted 115 people and the ordinary but 67. In other words, the good display was 72 per cent more effective than the ordinary display.

Twelve such tests were conducted in all. Averaging the results, it was found that increasing the intensity of the light on a window display from 15 to 40 foot-candles, increased its effectiveness by 24 per cent. By increasing the light intensity from 15 to 100 foot-candles, the increase in effectiveness is 42 per cent. Inasmuch as window displays are designed to attract the attention of people on the street, their effectiveness may be measured by the number of persons attracted during a given period of time.

It costs the Cleveland merchant 12 cents more per hour to light his windows at 100 foot-candles than it does at 40 foot-candles. The increase in light intensity, however, makes the windows 15 per cent more effective. He values his windows, when lighted at 40 foot-candles, at $100 of sales per hour. By increasing the light intensity to 100 foot-candles, he increases the sales value of his window by $15. The extra cost of 12 cents is insignificant in comparison.

Only a display window on an important street in a large city would have an advertising value of $100 per hour. Of course, it is only possible to guess at the advertising value of a display window as there is no way of measuring this value. But these tests furnish rather conclusive evidence that, whatever the advertising value of a particular window is, that value may be increased by increasing the intensity of the light on the display.

Your window displays will be more valuable advertisements for your merchandise if they are well and strongly lighted. The lighting system should provide for comfortable vision without glare or deep shadows. Lastly, make the light intensity in your windows greater than the intensity in any nearby windows.

This salesroom is well lighted both as a store and as a display window. The picture is of the Wills St. Claire salesroom in New York

Making Customers Want to Spend More

This Dealer Shows Accessories to Persons Waiting for Their Bill—It Beats Talking About the Weather and Telling Jokes, He Finds

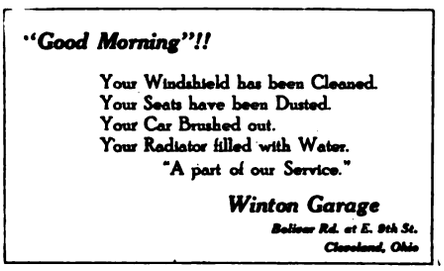
SOMETIMES it is a hard job to work up any enthusiasm over repairing a motor car. Particularly is this a problem with the garageman of the small town.

The salesman who sells the work and the cashier who takes the money know that the customer had to have the work done, or he would not have come in. About all either of them can do is to expatiate on the quality of the work, and help the customer to feel that the money is being properly spent. It's dangerous to smile too broadly, or the customer might feel that he is being stung.

How can a garageman or tire dealer bridge over that hazardous situation when the customer pays, so that the visitor will leave with a pleasant taste in his mouth?

One might talk about the weather, or crack a joke; but that would be glossing over the subject.

A. E. Fieth, motor car dealer and garageman, tire and accessory dealer, in Higginsville, Mo., seems to have solved the problem. His customers usually leave with some pleasant thought about motor cars in their minds, instead of a grouch over paying a repair bill.



The way he does it, is to bring every customer to the office, which is the accessory department, to pay the bill. The customer stands in front of a display case, which has clean glass, and shows interesting accessory items. The customer can hardly avoid glancing at the display; and almost always his eye lights on some particular item.

If the customer seems especially interested in his survey of the accessories, the making out of the bill may be prolonged a minute or so. When the receipt is handed over, the salesman or clerk reaches into the case, and picks up an item that he decides might interest the customer. He tells in a few words, its utility and desirability, and unless the customer shows fairly strong interest, promptly puts it back in the case again. If the customer lingers, the salesman mentions an item in another show case, and perhaps is given opportunity to demonstrate it.

There is no persistent effort to sell every visitor; but there is effort to cause every visitor to note the accessories. And when they leave the place they have partly forgotten about their repair bills; they are thinking of the accessory that appealed to them—and are wanting to spend more money with Fieth, instead of regretting that they have spent any money.

They won't come back, of course, unless they have been given first class service on the thing they had paid for. But if they are satisfied with the work done, they will then have two reasons instead of one, for coming back. They will come back for more service, and they will return to look again at the accessories, and often to buy them.

"Good Morning" Cards Build Good Will in Garage

The Winton Garage, Cleveland, has found this card to be one of its best advertising activities. They have found that when these cards are left in the cars stored in their garage they create a very fine impression upon the customer and he invariably retains them and shows them to others. These cards are post card size.

Demonstration Sells Automotive Equipment

JOHN HALL of the Hall Motor Co., Ford dealer in Ida Grove, Iowa, recently employed an effective means of stimulating the sale of additional equipment with new cars. Hall equipped a new Ford with wire wheels, bumper and other equipment worth about $100 and drove it around his territory. Within a week, as a result of the traveling advertisement, he had sold five cars with a total of $500 worth of new equipment. He employs the idea periodically with different equipment items, and finds that it yields definite results in increasing equipment business.

Ideas On Selling and Management

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Specializes in Truck Tire Sales and Service in Winter

WALTER WAGNER, who trades as The Buffalo Tire Service in that city, and whose yearly turnover is more than a quarter of a million dollars, has two distinct yearly business cycles. In fall and winter he specializes in the sale and repair of truck tires, and in the spring and summer in the sale and repair of ———tires.

On Aug. 1, each year, Wagner starts to line up his fall and winter truck business. This he does by sending letters soliciting business to all of Buffalo's truck owners. He keeps his lists of such owners up to date.

In connection with the direct mail method of selling tires, Wagner points out that persistency is the strongest success factor in such work. Wagner finds that at least three letters are necessary to stir the average prospect to a point where he is really interested, and he makes it a rule not to look for results until a prospect has received at least three letters. After the third letter the prospect becomes a subject for personal solicitation.

"Dolled Up" Car Sells Accessories

FRED V. CLUTE, Chevrolet dealer at Cohoes, N. Y., always has on his sales floor a car dolled up like a Christmas tree. He puts every accessory on it it will carry, particularly those which are showy or obviously useful. The buyer frequently falls for the dressed up car, which is priced to cover all the extras it shows. Clute says this is a very effective way to display and sell accessories as one in place on a car makes a much more effective appeal to the customer than does the same accessory shown in the show case. As soon as a car goes off the floor another is dressed up to take its place. The result is that hardly ever is a car sold by Clute which does not go out with a greater or less variety of accessories on it.

Rear Axle Adjustment on Buick Four-Cylinder Models

A Standard Method of Checking Ring Gear and Pinion Adjustment and the Procedure for Adjusting the Brakes

THE rear axle assembly includes not only the axle itself, but the propeller shaft, brakes, wheels and all mechanism contained therein or attached thereto. The construction and operation of the units are entirely conventional and need no special explanation. The principal adjustments are in the meshing of the pinion and ring gear, differential and brakes.

The Ring Gear and Pinion

The ring gear and pinion on the Buick Four are of the spiral bevel type. In order that they may operate correctly, the rear axle must be in perfect alignment. In other words, the differential axis must be in the same plane as the pinion axis. If there is any variation at all, the pinion axis must not be above the gear axis as this would tend to throw the contact or load on the heel of the tooth.

Another point to be observed before making any actual adjustments is the inspection of bearings. Where single row ball bearings are used they may have a slight angular movement but must not have any radial play. In other words, the shaft can vary slightly from right angles to the bearing, but the bearing itself should have no perceptible shake nor should there be lost motion between the shaft and the cone or the housing and the cup. Also see that the balls themselves are not damaged. If they spin freely, this is almost positive proof that they are all right from this standpoint. If the bearing sticks, wash it thoroughly with gasoline to make sure that there is no foreign matter present which would tend to wedge the balls. After cleaning, they should be kept in clean containers so that no dirt will get in before they are installed.

Where bearings of the roller type are used, the rollers are to be examined for pits or worn places. The sleeves should also be examined with the same idea in mind. All parts which go into the inside of the gear housing should be thoroughly cleaned and all chips, grit or other hard substances removed. All studs and nuts must be a good fit in threads so as to hold the gears and bearings in place, otherwise the gears will vibrate and will break down in a short time.

1—In mounting the ring gear on the differential, inspect the ring gear seat of the differential to see that it runs true with the bearing hubs. If it runs off more than .002 in. it should be faced off in a lathe.

2—When riveting the ring gear on the case, make certain that it is tight. The ring gear should not run out more than .008 in., using the bearing hubs of the differentials as centers.

3—When driving the pinion on the shaft see that it does not ride the key and that it is driven on tight. The pinion must not run out more than .004 in. on the shaft.

4—Roll the pinion around the ring gear by hand and note the position which the pinion takes at the large or small end, whether it sticks out or runs in.

5—Assemble them in the axle as nearly as possible in the position they assume in operation No. 4, allowing between .005 and .008 in. backlash.

6—Place the axle under the car and give the gear teeth a thin coat of white lead.

7—Jack up the rear wheels, start the engine and engage the high gear. Set the emergency brake until there is a slight load so that the teeth of the pinion will bear against the teeth of the ring gear. The brake should be equalized so that approximately the same load is carried on each wheel.

8—The various markings that may be observed are shown in Fig. 2. The shaded portions represent the contact of the gear. No. 4 illustrates the desirable form of contact. If the condition illustrated at No. 9 is present, this indicates that the load is pulling on the top portion of the teeth and the pinion should be moved in or toward the rear one, two or three notches of the adjusting nut until the marking in No. 4 is shown.

9—The conditions resulting in No. 4 marking show that the contact is just a trifle heavier on the toe of the tooth than on the heel. The pinion always has a tendency to lift and this lifting will take up the difference under operating conditions and bring about ideal meshing

10—Conditions shown at No. 8 mean that the load comes on the flank of the gear tooth and that the pinion is in too far toward the axle. Gears set up this way are noisy.

11—Conditions shown at No. 6 mean that there is too much back lash between the ring gear and pinion, and gears set up this way will eventually break off at the heel.

12—Conditions shown at No. 7 indicate heavy on the small end or the toe of

Better Mechanics

Article No. 268

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

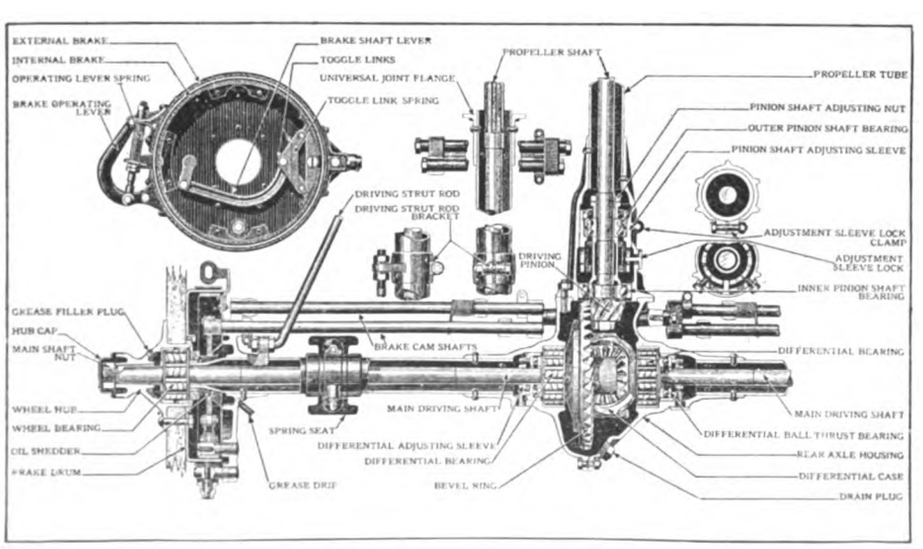

Fig. 1—Sectional views showing the construction and adjustment points of the Buick Four rear axle

Digitized by Google

the tooth. While not a bad setting, it does not want to be centered there too much or the teeth will eventually break off at the toe. To correct this, move the ring gear away from the pinion. Under no circumstances should the gear pass with a heavy contact on the heel.

13—The illustration at No. 10 shows two cones representing the spiral bevel gears. It illustrates the difference obtainable in backlash by moving either the pinion or ring gear the same amount. On a 4 to 1 axle it would take four times the movement of the pinion to produce the same change in backlash that it would on the ring gear.

14—After the gears are meshed as nearly perfect as possible, the car is taken out on the road for a test run of about a mile with no lubricant in the rear axle. This test will indicate whether the axle runs quietly. Oil will not deaden the noise to any extent. If the axle is noisy, repeat the tests with the white lead, trying to get the markings as near No. 4 as possible. Full tooth contact is necessary to carry the load.

The method described here is very much superior to the guess method, and it has the further advantage of making the results of trial adjustments visible so that the mechanic will know whether the adjustment is getting better or worse. The whole operation is quicker because it is not necessary to test out so many times for noise as the markings will tell, with a little experience just how much noise is to be expected.

Brake Adjustment

Adjustment of the brakes for wear is made at the brakes rather than at the turnbuckles on the pull rods. When adjustment is necessary,

1—Disconnect the pull rods from the brake levers on the axle.

2—Turn the adjusting screw in the anchor pin at the rear.

3—Turn the lock nuts for the lower part of the band and the hexagonal nut for the upper half.

4—These adjustments are to be made in the order named and to get a uniform clearance of 3/32 in. between the drum and the lining when the brakes are released.

5—After making the adjustments connect the rods to the levers, varying the length by adjusting the turnbuckles so that the ends of the rods will register with the eyes in the levers.

6—While the rear axle is still on the jacks, try the brakes to see that both sides hold evenly. If not, make a slight adjustment at the brake only. The foot pedal should travel 3 in. to set the brakes properly.

The emergency brakes are adjusted by shortening the rods with the turnbuckles.

Straightening Bent Steel Parts

Steel parts of a car which are bent should be straightened cold if they have been heat treated at the factory. The front axle, steering spindles, etc., should never be heated for bending. Heat treatments of these parts leave them in such shape that they can generally be bent back cold if the bend is not too sharp or if a fracture has not been started.

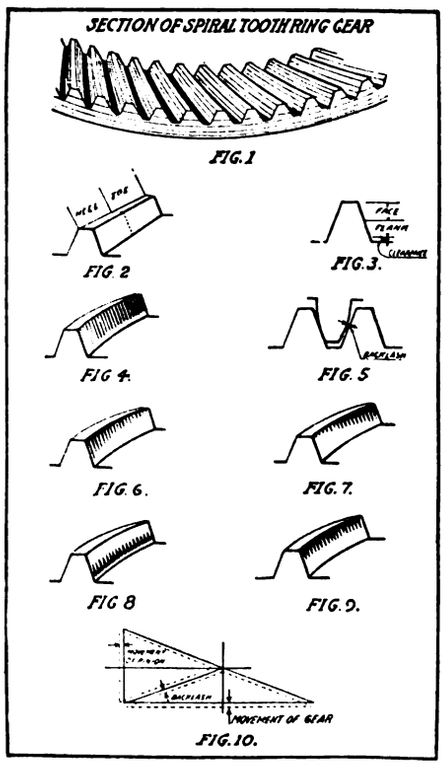

Fig. 2—Gear markings made under various conditions of adjustment. No. 4 is the marking that is considered best

Cause of Rapid Valve Seat Wear

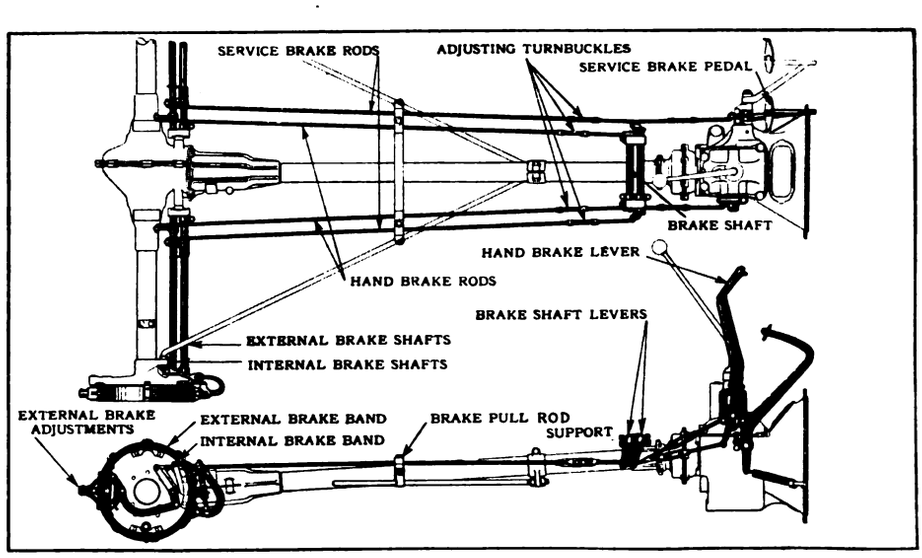
INVESTIGATION by the Bureau of Standards has shown that high temperature causes excessive wear of valve seats on automobile engines. In order to find the cause of this trouble with a certain make of engine, the government experts found it necessary to make several tests.

There were several instances in which valve seats were sunk into the cylinder block to a depth of nearly ¼ inch. In every instance, the trouble was found in connection with the exhaust valve seat, but it occurred only in a small number of engines of a given type, and even in the same engine all the exhaust seats were not equally affected.

The metal (cast iron) of which the cylinder blocks were constructed was first examined, but this proved to be typical of the material usually employed in cylinder construction, and no difference was noted between the metal of the valve seats showing excessive wear and those showing normal wear. Next it was thought that difficulty might have been encountered in regrinding the valves, some of the valves not being affected by the grinding compound. This would result in the seat being ground away in a vain attempt to get satisfactory tightness. A few experiments were sufficient to eliminate this as a cause of the trouble.

Attention was next directed to conditions of operation which might account for the trouble. To determine the effect of cam outline and spring pressure, a cam was designed which would give the valve about twice its normal lift and permit it to close very rapidly, thus striking the valve seat with considerable force; but operation with this arrangement failed to show an abnormal rate of wear. However, when this valve and seat were heated to a dull red color, conditions were changed and the rate of wear was amply rapid to explain the trouble.

It should be mentioned in this connection that a reducing flame was used in these experiments to avoid any possibility of rapid wear through oxidation of the metal. The temperatures reached in this experiment might result in actual operation from pre-ignition or a very slow-burning mixture, such as might occur, for example, when, due to poor distribution, one cylinder receives an excessively rich or excessively lean mixture. It is probable that one of these conditions, coupled with inadequate cooling of the valve seats, was responsible for the abnormal wear in the engines under investigation.



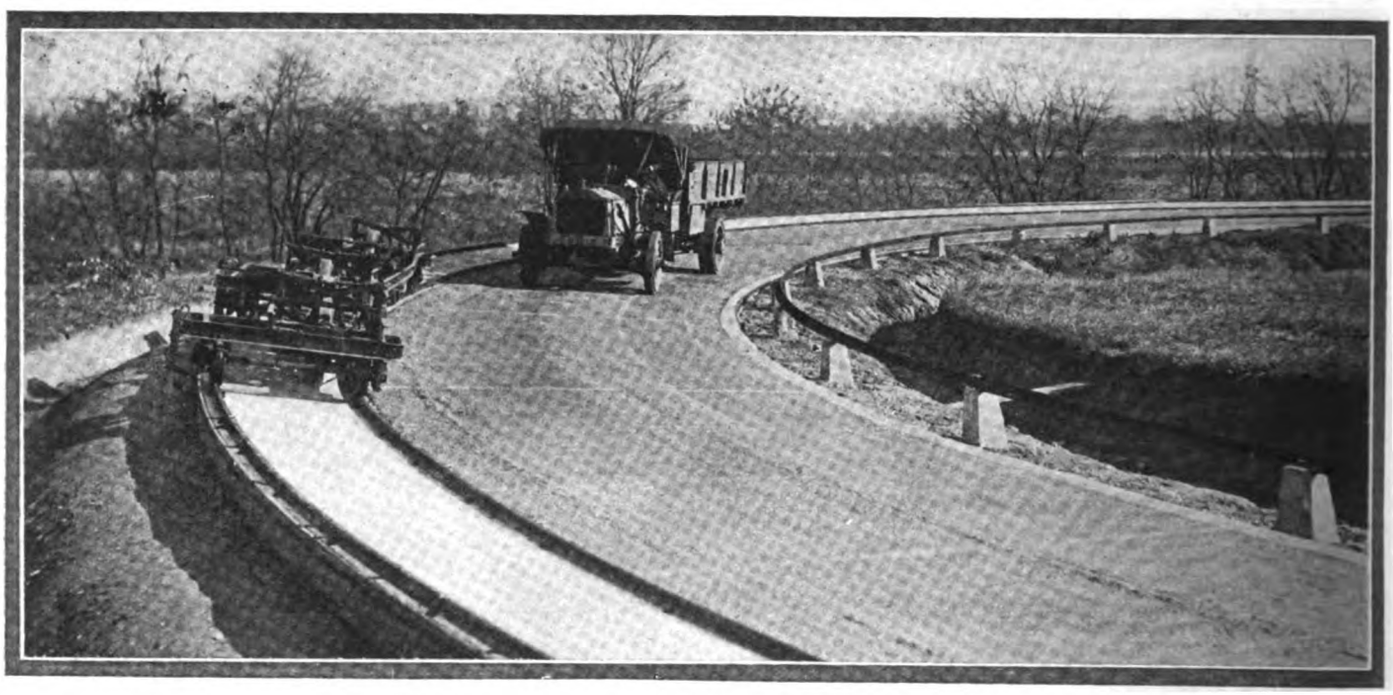


Fig. 3—Layout of the Buick chassis to show brake adjustment points

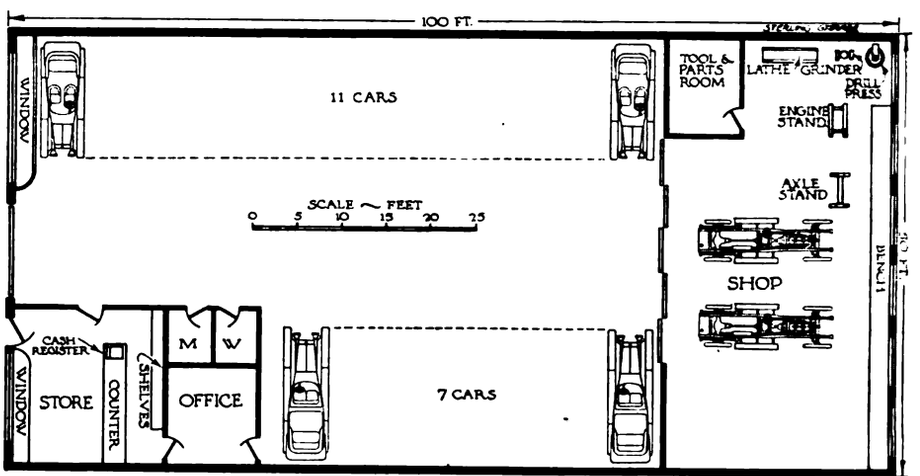
Extra Display Window Features Garage Building



One Story Building on Lot 50 x 100 Ft. Has Typical Interior Arrangement—Storage Capacity 18 Cars

THE plan shown on this page is typical of many garages all over the country. The business for which it is to be erected will derive its income from the sales of automotive equipment, service and storage. The display windows on either side of the entrance driveway are an unusual feature. Usually a display window is placed in front of the store but the space on the other side of the doorway is seldom used for this purpose. By utilizing both sides of the doorway for display purposes, the commercial advantages of the location are fully realized.

The store is small but is about in proportion to the size of the building. The office and toilets are situated in back of it. Entrance to the latter is from the garage floor as this is more convenient for customers. The office and toilets will be lighted and ventilated by skylights.

The arrangement of the cars in storage is conventional for a building of these dimensions. Two rows of cars facing a central aisle provide a maximum of convenience. The roof over this portion of the building should be supported by trusses as columns would interfere seriously with the movement of cars within the building. Ample light and satisfactory ventilation will be furnished by the skylights.

The shop is located at the rear. One corner of it is occupied by a tool and parts room. The special shop equipment includes lathe, grinder, drill press, engine stand and axle stand. The capacity of the repair shop is from three to four cars.

Floor plan for one-story garage building 50 x 100 ft. Provision is made for accessory sales, car storage and service. The storage capacity is 18 cars

Motor World's Department of

Better Business Buildings

Is a weekly feature of the paper.

Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage should be given when making inquiries.

This is the home of the Layman Motor Co., Buick dealer in Louisville, Ky. The exterior is simple yet its novelty makes it attractive

Book Review

Motor Vehicles and Their Engines by Edward S. Fraser and Ralph B. Jones. A. Van Nostrand & Co., New York City, price $2. Three hundred and seventy-four pages, 319 illustrations.

This is the second edition of this book. Since the first edition was published, the book has been revised and modernized and much new descriptive matter introduced, taking care of many mechanical changes that have been developed since 1920.

Many chapters have been entirely rewritten and a large number of new illustrations have been added and a number of obsolete price descriptions of machinery eliminated.

The book contains elementary, theoretical and practical information to assist in the operation, upkeep and adjustment of motor vehicles. It is written especially as a guide for the personal instruction of the car owner and is a handbook for chauffeurs, garagemen and repairmen. Technical language has been avoided as far as possible, and all descriptions are given in the simplest possible way, so that anybody can understand them. The fundamentals of gasoline engine operation, as well as the care and operation of the principal accessories, are discussed in detail, and at greater length than is usually the case in a book of this kind.

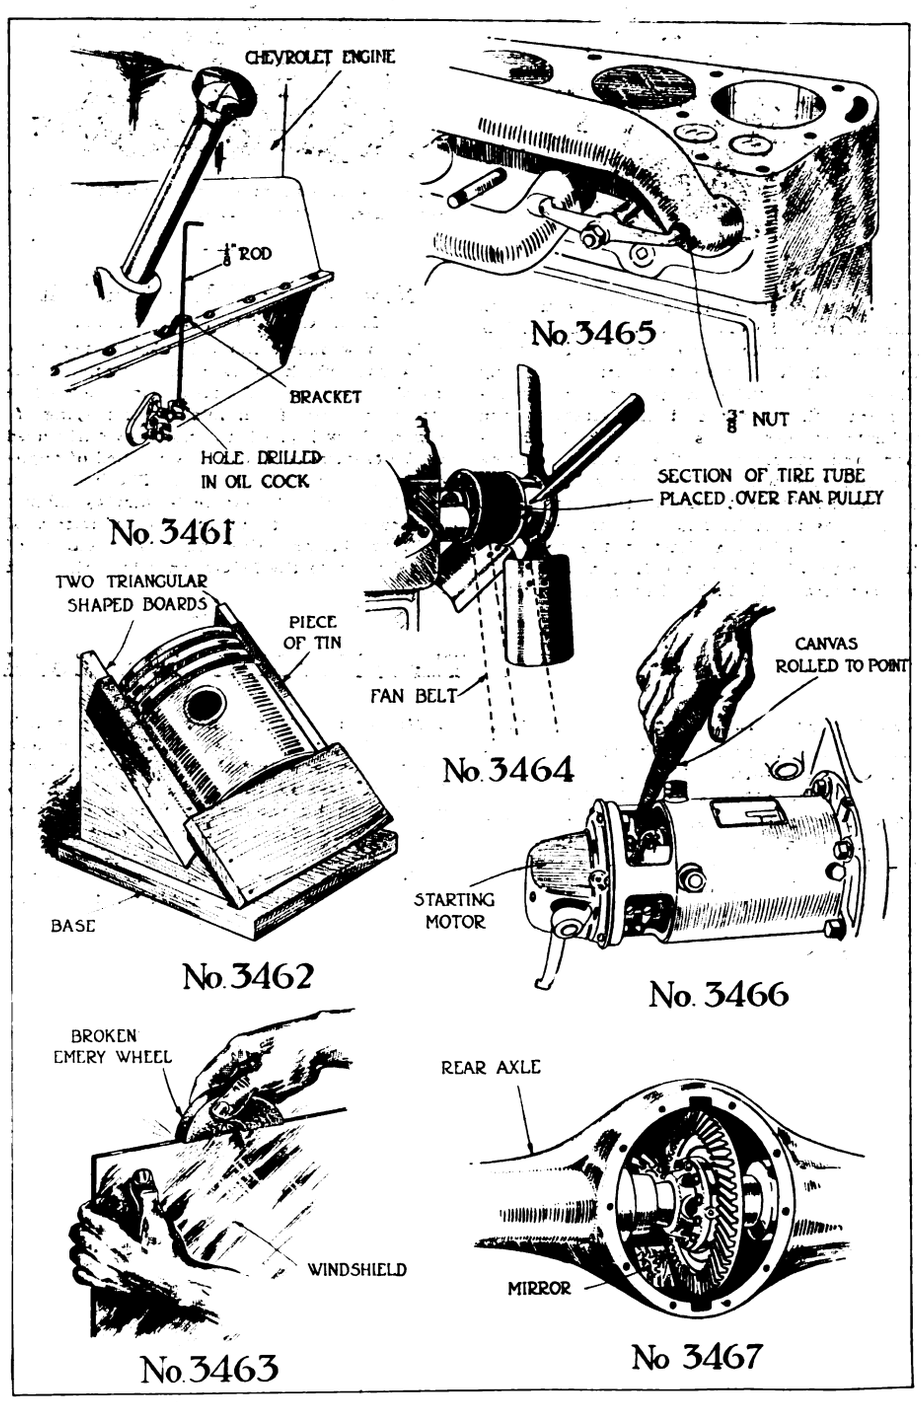
Repairshop Shortcuts

This Means YOU

REPAIRS strictly cash. Positively no credit. This means you. This sign was hung in a service station that we visited. Nice friendly way to greet the customer. We felt like saying, "This job I want done must be strictly first class. No monkey wrench mechanics. This means YOU." Sure we want to do business for cash and nine-tenths of the customers will pay cash without being asked to. But don't insult the customer that you have advertised to, written to and otherwise worked hard to get into your place. The wall is no place to hang these insults to customers. Take the signs down. If he asks for credit or you doubt the value of his check, tell him so in words, not signs. This is an opportunity to explain your policy.

No. 3461—Oil Petcock Extension for Chevrolet Superior—To prevent soiling the hands or clothing when testing the oil level of the Chevrolet Superior model, an extension is made to the upper oil cock. This consists of a piece of ⅛-in. rod bent at right angles at the top and bottom, the lower end going through the petcock handle and the rod head through a bracket.—H. Walter Maass, M. & M. Motor Sales Corp., New York City.

No. 3462—Piston Holder—A piston holder or jig for drilling holes at an angle to drain oil from the piston ring grooves is made of two triangular-shaped boards mounted on a base with a piece of tin between shaped to hold the pistons.—W. C.



No. 3463—Fitting Windshield Glass—When cutting and fitting new windshield glass a smooth edge is obtained by finishing the cut edge with an old or broken piece of emery wheel.—Hayes D. Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3464—To Prevent Fan Belt Slipping—If the fan pulley is so smooth that the belt slips, a piece of inner tube, a great deal smaller than the pulley is cut the right width and stretched over the rim for the belt to rest on.—C. A. Newquist, Ledan, Ky.

No. 3465—Replacing Ford Manifolds—The exhaust manifold is put in place and one of the clamps put in position on the stud. Before tightening the clamp a ⅜-in. nut is placed between the clamp and the exhaust manifold which will hold the clamp out enough so that the intake manifold can be put in place, at the same time holding the exhaust in position.—F. R. Hartsock, Warren, Ind.

No. 3466—Cleaning a Commutator—A commutator is cleaned by rolling up a piece of heavy canvas, bringing one end to a point. This is soaked in clean gasoline and applied to the commutator from the side of the generator after removing the cover.—Lapierre's Garage, St. Paul, Canada.

No. 3467—Adjusting Axle Gears—Axle gears that are hard to see can be adjusted by placing a small mirror in the bottom of the differential case at such an angle that the make can be observed.—Clayton Rogers, Medford, Wis. (Clayton Rogers is 11 years old).

Equipment to Sell

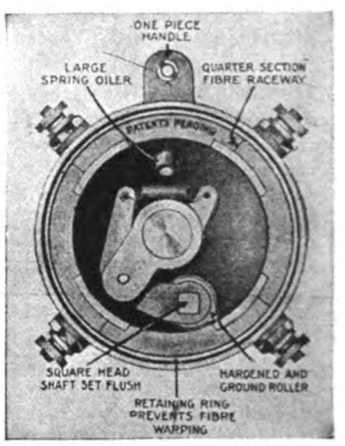
New Devices for the Car and Truck

Westinghouse Type BT Ammeter

Westinghouse Electric & Mfg. Co.,
East Pittsburgh, Pa.

No wire connections or coils are used in this meter. The case of the instrument has a magnetic yoke projecting to the rear, through which is passed the current carrying the wire. The yoke has pole pieces extending into the meter and the strength and polarity of these poles vary with the direction and strength of the current passing through the wire. There is also a fixed permanent magnet inside the instrument with poles at right angles to those on the yoke. Pivoted on a shaft in the center of this group of poles is a soft iron vane with pointer attached which takes up the position

which is dependent on the amount of current carried by the wire.



New Gilmer Fabric Fan Belt

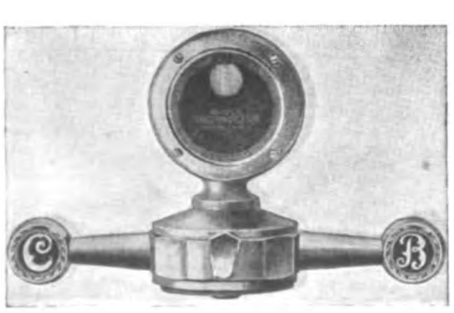
L. H. Gilmer Co., Tacony, Pa.

The new fabric fan belt uses a new type of weave which is said to accomplish the double purpose of preventing excessive stretching and of minimizing the fraying of edges. New ingredients, not previously used in the treatment, and a new method of application have also been used. The belt has a metallic finish. A new dealer display cabinet is also being put out for the exhibition of radiator lacing, showing the method of attachment to the ledges on which the hood rests.

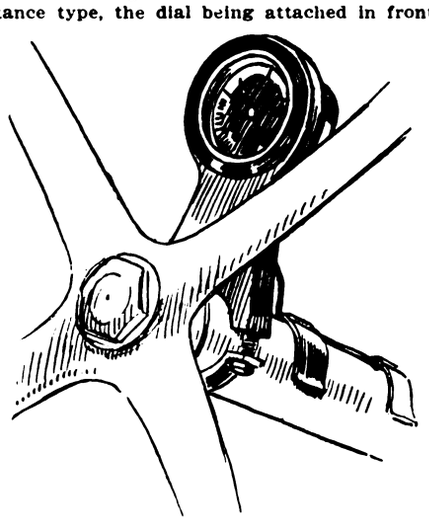
M. and R. Timer for Ford Cars

McCulloch Mfg. Co., 216 High St.,
Boston, Mass.

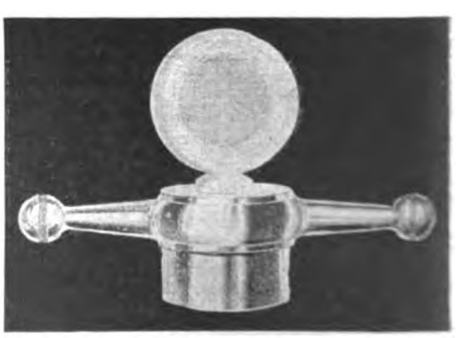
The raceway of the timer is made in four sections from seasoned rock grain fiber. The retaining ring binds the four-piece raceway and in combination with the fiber washer fitted around the contact posts, keeps the raceway rigid and prevents the posts from touching the shell. The contact segments are made of steel which has the same wearing qualities as the fiber.



Three New Moto-Meter Models



Moto-Meter Co., Inc., Long Island City, N. Y.
Prices: Midget, $4 with black cap, $3.50 without cap; Aristocrat, $7; steering column type, (approximately) $15.



Two new models of Moto-Meters have been announced and a combination of instrument and locking cap, making three new selections. The Midget model is specially designed for Fords. It is made in a substantial manner and is superior to the previous models made for this car. Glass is used on both sides which adds to the appearance and also protects the markings from the elements. This model is furnished either with or without a black radiator cap. The Aristocrat model for Fords incorporates a Midget model with a locking cap which has ball handles. The balls carry spaces for the owner's initials which are secured from the factory through a postal card to be filled in by the owner thus eliminating the necessity of the dealer carrying a stock of initials.

The steering column model is of the distance type, the dial being attached in front of the steering column under the wheel and connected by a cable to the bulb of alcohol solution which is mounted at some point in the water circulation system. An entirely new feature is seen in the fact that this type can be used on air cooled cars by locating the bulb in the air which is just leaving the cylinders, say in the chamber behind the flywheel.

A service assortment of screws, rims, crystals, etc., is supplied for $5. A three way socket wrench is included in the outfit, this being to take nuts that hold the Moto-Meter in the filler cap.

Equipment for the Shop

New Machinery and Tools

Hinckley-Meyers Cylinder Reboring Tool

Hinckley-Meyers Co., Jackson, Mich.

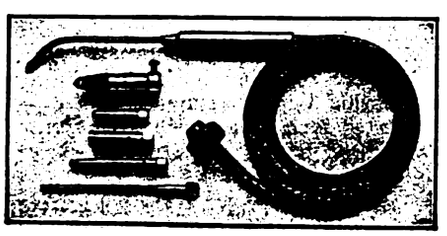
Some of the distinctive points claimed for this new cylinder reboring tool are a pilot centering device and adjustable bronze bushings, which eliminate chattering and assure a true bore. It is said that an ordinary mechanic can operate the machine and that the average time required to rebore four cylinders will be about 30 minutes.

Usaco Air and Water Towers

United States Air Compressor Co.,
Cleveland, Ohio

The head of this tower revolves in a complete circle on ball bearings and serves a radius of 15 ft. The hose arm is counterbalanced and returns to a vertical position automatically. The water hose is fitted with a quick-acting, easily operated faucet. Model 6 includes air hose and chuck only. Model 5 includes air and water connections. No. 4 is the same as No. 6, except that it has a waterproof globe light. No. 3 is the same as No. 5, except that it has a light. The one illustrated is No. 5.

Acme Reamers



Acme Tool Co., Mason City, Iowa
Price $4.50

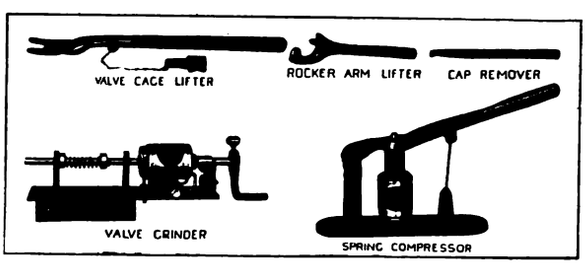
A single-bladed piston pin bushing reamer. It will handle bronze and cast-iron bushings. It is made .025 in. oversize and the blades will expand 1/8 in. Sizes run in sixteenths of an inch from 5/8 to 1 in. Extra blades 75 cents each.

Torit No. 13 Acetylene Torch

St. Paul Welding & Mfg. Co.,
St. Paul, Minn.
Price $7.50

The outfit consists of a torch about 10 in. long, a set of four tips, one of which is made especially long and slim for radiator and battery work, a soldering copper which clamps over one of the tips, five feet of rubber hose and a connection through the acetylene tank.

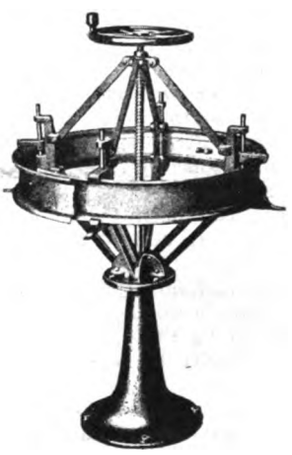
Speed-O Multiple Valve Spring Lifter



Speed-O Multiple Valve Lifter Corp.
611 Amsterdam Avenue, New York

This tool is made in the following styles: No. 1, four-valve spring lifter for Fords; No. 2, eight-valve spring lifter for Fords; Nos. 3, 4, 5 and 6, eight-valve spring lifters for Dodge, Maxwell, Overland and Cadillac, respectively. Nos. 7 and 8 are twelve-valve spring lifters for six and twelve-cylinder Packards, respectively. These tools compress the valve springs and provide free access to the keys.

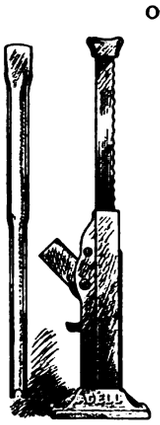
Marvel Valve Grinding Outfit



Autoquip Manufacturing Co.,
Rochester, N. Y.

A special outfit for the Buick Six. Included in the outfit are a valve cage lifter, rocker arm lifter, cap remover, valve grinder and spring compressor. These tools make up a complete equipment for removing, grinding and reassembling the valves on a Buick Six.

Hudson Tire Changer



Hudson Products Co.,
153½ Grand Avenue, Portland, Ore.
Price $35

This is a special tool for collapsing and expanding split rims. The height is 40 in. over-all. It may also be used on solid rims.

Adell Jack No. 109

Adell Manufacturing Co., Inc.,
Orange, Mass.

This is a quick-acting, light-weight jack. It weighs 2½ lbs. and has a lift of 6½ in. It is constructed of pressed steel. Each jack is individually packed. The shipping weight of a carton containing 12 jacks is 32 lbs.

Swing-Spout Measure

Swing-Spout Measure Co.,
145 West 63rd Street, New York

The spout is made of seamless steel tubing. There is an automatic valve in the bottom of the measure which is operated by moving the spout. In the upright position of the spout the valve is closed. When the spout is pushed all the way down the valve is wide open. The curved tops prevent spilling. The measures are copper plated.

Garageman Responsible When Car Is Removed Without Owner's Permission

Carelessness in Insisting on Rule Often Leads to Losses Through Theft and Accident

A SHORT time ago, I was told of a case where a motor car owner gave his brother permission to use his car. The brother went to the public garage where the car was stored and took the car out. Neither the garageman nor the garage attendant inquired of the brother what authority he had to use the car. Fortunately for the garageman, the brother had been given permission to use the car and it was returned in good order. If, on the other hand, the brother had not had permission to take the car, or some other person had claimed to be the car owner's brother, when in reality he was merely a stranger, the garageman would have paid dearly for his carelessness.

When a car is put in the care and custody of a garageman, he must keep it and care for it until it is re-delivered to the owner. If, through his carelessness, while he has possession of the car, it is stolen or injured, he must pay damages for the loss the owner sustains.

This principle of law is well understood. I do not think that there is any garageman who does not know about it, yet from time to time, a case comes to my notice where a car is allowed to be taken out of a public garage without the garageman attempting to find out if the person taking the car has the owner's permission to do so. It may be a little more trouble to make this investigation each time a brother or a friend of the owner comes along for the car, but in the end, it will be worth while, because if it becomes generally known that the garageman is careless in this respect, he will not only lose trade, but sooner or later a car will be stolen, suit will be brought, and he will have to pay for his legal liability in each case is absolute.

Vendor Has Priority Lien in Virginia

Editor Motor World:—We have had considerable discussion as to who is entitled to payment first on a car.

"The original seller who holds a lien contract against the purchaser's car, or a garageman to whom the purchaser has carried his car for repairs?"

We would also like to know if the seller has the right to go to the garageman and repossess the car without paying the repair bill that they have against same if the purchaser of the car is delinquent in his payments. M. S. & S. Co., Norfolk, Va.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Answer:—As your business is located in Virginia I must assume that you are interested in a case which arises under the law of that state. In some states garagemen's liens have priority as in New Jersey and New York—in others the lien of the conditional vendee takes priority as in Illinois and in Texas—while in a third class of States priority is determined by the date of the filing of the respective lien claims as in Michigan.

In your State you have no specific statutory garageman's lien law, only the common law lien that all mechanics and artisans have for repairing property, and I believe for that reason the lien of conditional vendors and holders of chattel mortgages will take priority over the lien of a garageman for repairs.

Buyer Entitled to Interest When Money Is Returned

That under a contract for the sale of an automobile which provides for the return of the purchase price upon a breach of warranty given against defects in construction, the buyer is entitled to a return of the amount he has paid with interest from the time he rescinds the contract to the time judgment is entered in his favor in the suit he has brought against the dealer was the decision of the Supreme Judicial Court of Maine in the late case of Le Blanc vs. Le Vasseur reported in 118 Atlantic Reporter at page 376.

Must Safeguard Customers

That every business man is under a duty to use a reasonable degree of care to prevent his customers from being injured while on the premises he uses for the purposes of his business is the decision in the recently decided case of Chapman vs. Clothier reported in 118 Atlantic Reporter at page 356.

The Court in this case pointed out that while a business man is under a duty to use ordinary care to keep his place of business in a reasonably safe condition so as not to expose his customers to unnecessary dangers he is not liable for accidents they may sustain except upon their giving proof of his default or their showing his want of care in keeping the premises safe, when they sue him.

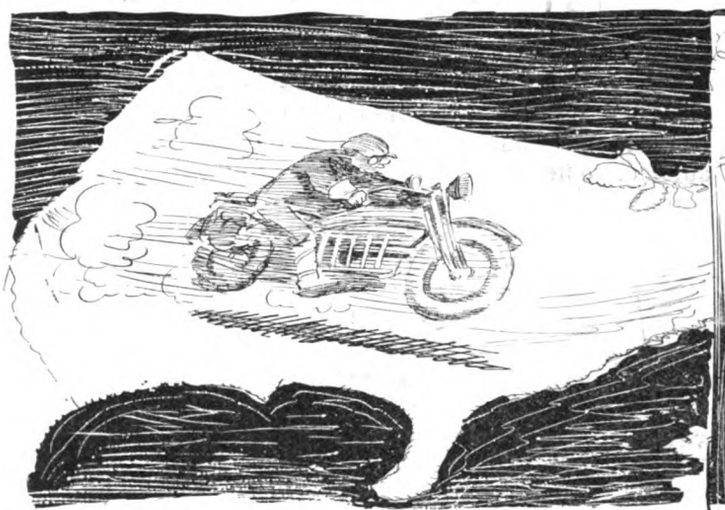
Dealer Cannot Rescind Without Finance Company's Approval

In the recent Maryland case of Bea... Motor Car Co. vs. Narer, it was the decision of the court trying the case that a company selling an automobile on the deferred payment plan and accepting a note for unpaid installments cannot assign the contract and the note to a finance company and then rescind the contract without the permission of the finance company.

It was held, therefore, that an action could not be brought by the buyer to recover his money paid on account of the purchase price based on such a rescission on the part of the seller unless the consent of the finance company to the rescission was shown.

Conditional Purchaser a Party in Suit on Policy

That a purchaser of an automobile under a conditional bill of sale is a necessary party in an action on an automobile policy started by a conditional seller, was the decision in the recent Indiana case of Auto Owners' Protective Ex. vs. Edwards, reported in 136 N.E., page 577.



Seller May Retain Payments

That in Indiana a vendor, under a contract of sale payable in installments which provides that on default in the payment of any installment, the seller may rescind the agreement and cancel the contract, the vendor may retain any payments already made, at the time such a default and rescission occur, was the decision in the case of Hawkins vs. Robertson, 136 N.E., page 576.

The After Market

CONSERVATIVE estimates fix the number of motor vehicles in use in the United States at eleven and one-half millions. This is a gain of approximately one million over a year ago.

These pictures present a vivid picture of the bigness and growth of motor transportation but do they not mean more than that to the automotive industry? Do they not suggest, in unmistakable terms, the vastness of what has been termed the after market, that is, the business of serving this great fleet of cars and trucks with the replacement and additional equipment and the labor for repair work which is necessary to keep these vehicles satisfactorily in service?

Car and truck manufacturers and their distributors and dealers are assured of a tremendous business in supplying the demand for new vehicles on the basis of a probable replacement of a million a year and a growth of another million, but there is another tremendous business for jobbers, dealers and garagemen in catering to the after market which is bound to grow larger year by year as motor vehicle registrations increase.

The after market calls for a thousand and one items of replacement equipment to keep cars and trucks in serviceable condition. It also calls for hundreds of items of additional equipment to give owners greater satisfaction from their cars and trucks. It also calls for the labor of many thousands of men performing operations which have to do with repairs and equipment installations and replacements.

This after market belongs to the entire industry but has not the automotive dealer—the man with the car or truck agency—often been guilty of overlooking its profit possibilities? Hasn't he overlooked many chances to strengthen his business position and his customers' good will by letting many of these profitable activities of the after market slip away into the hands of specialists, many of them businesses wholly or in part outside the automotive field?

It is not conceivable that in the United States there will ever again be less than eleven and one-half million motor vehicles, and it is virtually certain that this registration will be increased year by year for a number of years at least. This means that the after market about which we have been talking will grow stronger and stronger, and offer greater and greater profit possibilities. It is a market which should be getting the keenest attention of men in all branches of the automotive trade.

One Salesman, One Dealer, One Million

HEADS of the Automotive Equipment Association have begun work on a campaign which is bound to command interest among dealers because some of them are to be made subjects of an experiment on which the campaign is based.

As readers of Motor World know, the A. E. A. is a national association of automotive equipment manufacturers and jobbers which has been engaged for upwards of a year and a half in a campaign to promote business by broadening the retail sales outlet. Equipment manufacturers and jobbers cannot make profits unless dealers do and the campaign has been directed toward assisting dealers in building business and profits.

The A. E. A. merchandising campaign has been proceeding along lines of broadcasting better business propaganda. The campaign set out to place before the retail trade ideas which would help dealers to "Ask 'em to buy" more automotive equipment. Now it is proposed to add an additional feature, that is, to concentrate on a dealer here and a dealer there and help him individually to build up his sales and profits. The two-fold object, of course, is to help these selected dealers increase their sales and to prove to the rest of the trade by the experience of these selected dealers that it can be done.

If the idea works out according to plans, the salesmen of jobbing houses will pick out a dealer each for concentrated assistance during the next six months. The salesmen will try to show these dealers how they can sell more accessories and replacement equipment and how they can make more money in the shop by combining good workmanship, good management and good salesmanship. If one thousand jobber salesmen go to work with a dealer each there will be one thousand dealers engaged in the campaign, and if these dealers increase their business one thousand dollars each in the next six months the increased volume of business for the industry will be one million. This is where the A. E. A. got its new slogan, "One Salesman, One Dealer, One Million."

We imagine that in a good many towns throughout the country the right kind of dealer, with the co-operation of the right kind of jobber salesman, will slice off

Digitized by Google

for himself a sizable share of this million-dollar sales increase. It is purely a plan of co-operation in which no dealer need enter unless he can see that he will get constructive advice and assistance from the jobber salesman. Nobody is going to be exploited. The plan is simply one to promote business and profits for the entire trade by serving the car and truck owner.

Committee on Highways

AT a convention some time ago of a national association in the automotive field only four out of eleven members of a committee on highways put in an appearance at the committee meeting, which was twice postponed before it was finally held because nobody but the chairman showed up at the first two "meetings." When the four committeemen got together they were unable to adopt anything in the way of constructive recommendations to the convention, not so much because of the small attendance as because the committee had given no preparatory thought to information to work on. As our readers have suspected by this, this was a committee on highways in name only. There is much of this indifference in all branches of the automotive trade, which ought to be concerned more than any other single group in the country in the promotion of better highways. If only a strong minority, at least, of manufacturers, distributors, jobbers, dealers and garagemen take a hand, as they should, in working for improved roads in their cities, counties, States and the nation we shall begin to get public officials and the public interested in the really progressive measures that are necessary to assure American transportation the kind of highways it must have.

How Many Used Cars?

IN two cities recently a census was made of used cars in dealers' hands and in a city of approximately a million population dealers' used car stocks averaged 53 at the end of November, while in a city of half a million the average was 15.

The dealers in the smaller city obviously were in a better position to begin the winter season. Their assets were largely liquid, making it possible for them to begin soon the stocking of cars for the heavy demand of spring. Their wealth was in money in the bank rather than in used cars bound to eat their heads off during the cold months, and possibly to shrink in value because of new car price deductions or other developments between now and spring.

The trade has probably sold at least two million of the more than two and a quarter million cars shipped from factories so far this year. On this two million new cars it is safe to say that at least a million used cars have been taken in trade, and it is quite possible that the number has reached a million and a half on the estimate of many dealers that they have trades on 75 per cent of their business. How many of this million or million and a half cars are still in the hands of dealers nobody knows but the figure would doubtless shock a great many people if it were obtainable.

Dealers should realize that it is the dealers who are carrying these used cars. The manufacturer and his branches, of course, are interested in this predicament but not so keenly as the dealer himself. The situation in the city of a million people as compared with the brighter picture in the city of half a million suggests that dealers would do well to give the keenest attention to the results obtainable by holding these car stocks down to a reasonable minimum.

At a recent dealers' meeting in a large city the speaker asked for figures on used cars on hand, and one dealer said: "Twenty is our limit." Trading in his establishment stops when there are twenty cars on the floor and until the stock is reduced the attention of new as well as used car salesmen is devoted to clearing out this merchandise. This is a policy which a great many dealers have found practical. It keeps them away from reaching the danger point on frozen assets. Undoubtedly at periods it slows up the sale of new cars, but it is well to remember that the sale of new cars must always be kept in reasonable relation to used car sales, else we shall have an industry demoralized by lack of dealer profits.

An Automotive Legislator

IN Philadelphia W. H. Metcalf, branch manager of the Wire Wheel Corp. of America, has been elected to the Pennsylvania Legislature. He is not the first automotive man so honored, but he is one peculiarly fitted for the office through broad knowledge not only of the automotive business but of business and public affairs generally. It may be expected that among other things Metcalf will exert a sane influence on legislation that has to do with motor vehicles and the kindred subject of highways.

There is no reason why in every State there should not be a legislator or a number of them drawn from the ranks of the automotive trade. Only two things are necessary: Find the man and organize to support his campaign.

Things to Think About

"KEEP your powder dry and your assets liquid," Wayne Hearn wrote the other day to the dealers in a city where he lectured almost a year ago. Hearn, traveling all over the country, has seen enough of excessive and immovable used car stocks to have a pretty definite idea of the meaning of liquid assets.

It has been said that curiosity is the foundation of scientific progress. Have you a curious clerk or mechanic in your establishment? Let him exercise his curiosity in odd moments. It may produce a money-making or money-saving idea for you.

How people talk about the little cup of black coffee, the "eye opener," that is served with the morning paper and the breakfast menu card on one of the limited trains! Why? Because it's an extra touch of service. Are you using some extra touches of service to get people talking about you—and liking you?

American Coachwork Dominates De Luxe Models in New York Salon

Wide Selection of Beautiful Custom Jobs for All Chassis a Feature of Exhibits—California Top and Folding Glass Sash an Interesting Development

THERE can be no doubt of the beauty of the 1923 automobile, but if it were possible to make a success of painting the lily, the exhibitors at the Eighteenth Annual Automobile Salon at the Hotel Commodore in New York certainly would seem to have qualified themselves for the contract.

Motor car makers from eight nations have combined with body builders to present in exhibition the very finest in chassis and coachwork. As usual, the show is entirely a custom show. It is held essentially to reach wealthy prospects to whom the regular stock chassis and bodies do not appeal and who want something different.

The Salon this year has more chassis and body models than last year. The eight nations represented are: England, France, Belgium, Italy, Germany, Spain, Austria and the United States. Twelve coach builders of prominence in the United States have fitted their offerings to American and foreign chassis of the higher price class.

Of considerable interest to those interested in American cars is the first presentation of Leon Rubay Voitures De Ville, which were described in MOTOR WORLD a few weeks ago.

Several manufacturers have worked out very clever California top types with the glass sashes folding into a compartment when not in use. The Leon Rubay car has such an arrangement in which the sashes hinge downward into a cavity between the front and rear doors. The outside shell of the body simply hinges downward and the sashes hinge upward. In this case there are four sashes. In a Rubay body for the Peerless with a front door on the left side and a rear door on the right side, there are only two sashes on each side, those on the left side folding into a cavity where the rear door would ordinarily be, and those on the right folding into the space ordinarily occupied by the front door. A rather complicated but apparently efficient system of catches and springs keep these parts from rattling whether the sashes are in use or folded up.

Folding Step Appears

Another innovation in design is shown in one of the Isotta Fraschini limousines. When the doors are closed no steps or runningboard are visible, and the effect of the terminating front and rear fenders is odd. When any door is opened, a step is automatically folded down under it. This particular model incidentally is the extreme in appointments. All interior fittings, door handles, etc., as well as the exterior handles, are in ivory. There are shades for all windows, even including the front ones, and the heavy plate glass in the windows is cut with an ornamental design in the corners. All windows operate with lever regulators.

While most of the larger closed bodies are built to be chauffeur-driven, there are a number of open models on more of the sport type with racy lines and a minimum of top hamper. A Locomobile phaeton with a Victoria top has a separate hinged cowl attached to the back of the front seat with a one-piece windshield which almost meets the front part of the Victoria top.

Soft tops on closed bodies predominate, and there seems to be a general attempt to reduce the total height of the cars. A Lanchester coach with a soft top and dark colored interior finish has fore and aft stringers and cross carlins finished in light natural wood, giving a somewhat unusual appearance.

Some Unusual Features

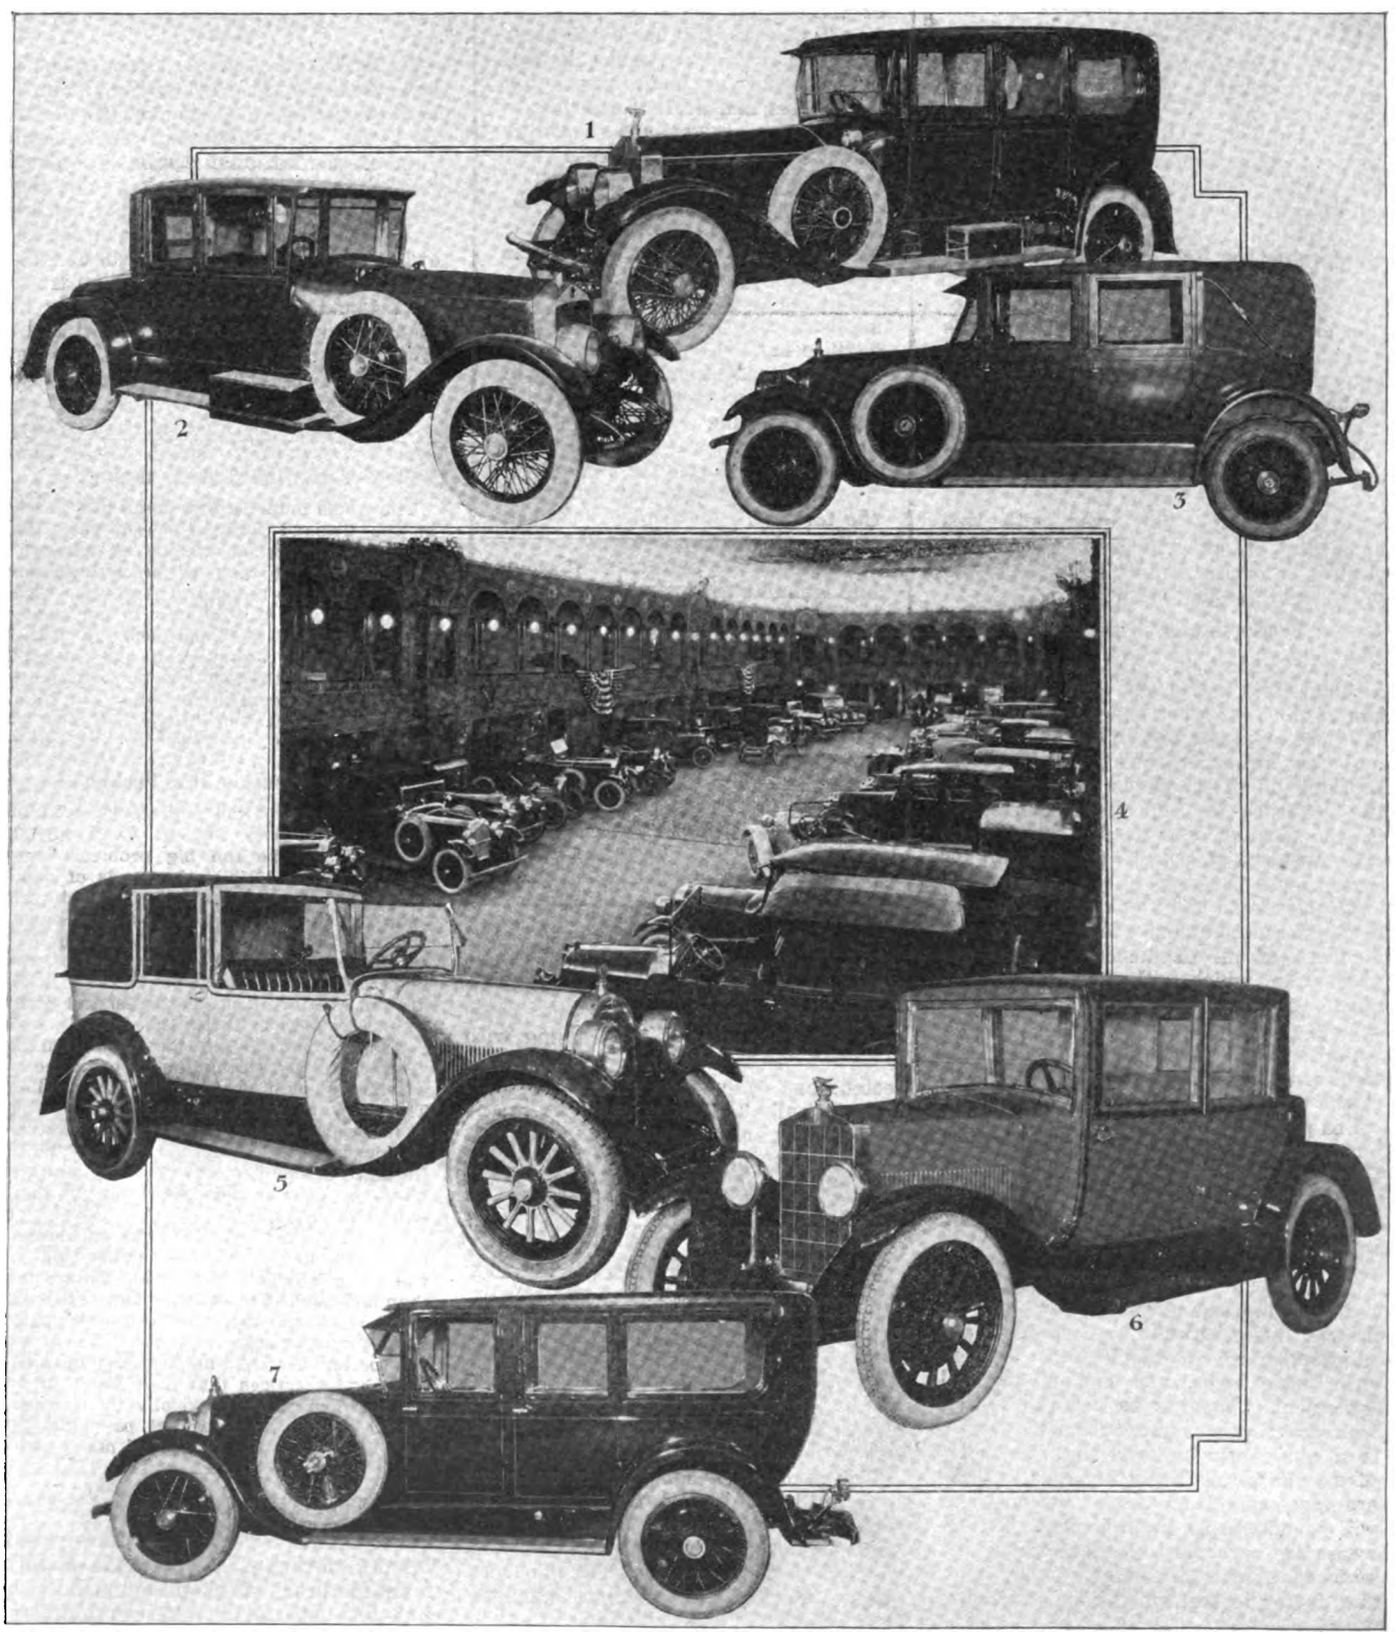
A Le Baron body on an Isotta Fraschini chassis is probably the extreme in sport closed models. The top part of the hood, starting at a point in front and broadening out past the windshield, is painted a dark brown, and the edge of the point is accentuated by a raised bead. Below the body is a dark gray. The front runningboards are very long and have a long slope to a point beneath the front door. The slope of the fender nearly parallels the angle of the brown point on the hood.

A Hume Body on a Marmon is of the California type, with a very low appearance, the sashes being nearly square and the frames inset. The inside of the body, although conventional, is very luxurious. A seat arm in the center of the rear seat is removable, so that three passengers can be accommodated, if desired.

Among the interesting chassis that are not so well known yet in this country are the small FIAT and the two Hotchkiss models. The Hotchkiss models are a four and a six, both having front wheel brakes and a number of mechanical and constructional ideas not heretofore seen in this country. The rear springs on the six are 63 in. long, of the cantilever type, but with a compensating and shock absorbing lever under the springs to make for easy riding on rough roads at high speeds. The valves on the six are overhead and are operated positively by eccentrics instead of cams, the eccentric not only lifting the valve but returning it to its seat. The valves on the four are cam-operated.

While the four speed gearset has practically disappeared from American chassis, a number of the foreign cars at the Salon are so equipped. This is doubtless due to the fact that the engine sizes and gear ratios suited to city driving in the third gear would not be productive of sufficient speed on the open highway. On most of these gearsets, the reverse is protected by a latch.

Four wheel brakes, transmission brakes, metal dashboards and V-type or rounded radiators characterize many of the foreign cars as well as some of the American models. Most of the bodies, even on the foreign cars are the products of American coach builders.



The colors displayed are for the most part rich but unobtrusive, although there are a number of bodies of the sport type in pink, fire engine red and cream. However, there is not the preponderance of bizarre colors that has characterized some of the previous Salon exhibitions. Wheels are mostly wire or disk, although there are a number of models with artillery type wheels. There is a general tendency to provide a place for baggage and many interesting designs are shown. A Winton phaeton with a Healey body has a recess on the rear with wooden strips on the bottom and aluminum guard rails. Sufficient space between the front of the recess and the spare tires allows for carrying a good sized trunk.

The Exhibitors

The car manufacturers exhibiting are Benz, Brewster, Cunningham, Daniels, Duesenberg, Fiat, Hispano-Suiza, Hotchkiss, Isotta Fraschini, Lanchester, Mercedes, Minerva, Panhard, Rolls-Royce, Rubay, Sunbeam, Voisin and Winton. Cars exhibited by coach makers are Cadillac, LaFayette, Lincoln, Locomobile, Marmon, Packard and Peerless. Coach exhibitors are Brewster, Brooks-Ostruk, DeCausse, Demarest, Fleetwood, Healey, Holbrook, Hume, Judkins, Le Baron, Locke and Rubay.

OUTPUT IN NOVEMBER PLACED AT 220,000

Ninth Consecutive Month to Pass 200,000 Mark—2,500,000 Year in Sight

NEW YORK, Dec. 4—With production of cars and trucks estimated at 220,000, November not only establishes a new record for that month but becomes the ninth consecutive month to pass the 200,000 mark. This figure was reached in the face of a short working month, inclusive of a holiday, which was the only factor keeping the total output from equaling that of October.

As it is, the high mark in the production history of the industry for a year's output has been passed by a substantial margin, and the end of December will probably see the total production for the twelve months around 2,500,000. There will be some curtailment of operations this month, due to the closing of many of the plants for the regular inventory-taking. But even with this done, the output will have to be only slightly in excess of 150,000 to bring the year's total to that figure.

Production at High Level

Manufacturing is being maintained at a remarkably high level, despite the season of the year when there is a seasonal lull both at plants and in the sales fields, and few producers are reporting any tapering off of schedules. They are being governed in their operations solely by the demand, and as yet there is no wide evidence of a decline in the call for cars.

While closed cars continue foremost in the manufacturing program, there is evidence of an expansion in open car production, which will grow steadily to meet the anticipated demand in the spring. Body plants are working full blast to catch up with back orders as well as to meet those current. So great is the press for closed bodies that factories producing them will work at maximum capacity throughout the winter. Greater relief will come with the opening of additional plants after the first of the year, but probably not before spring.

Transportation Improves

Some improvement is noted in the transportation situation. Shipments are being received by Pacific Coast dealers with more regularity and added rail equipment is moving carloads that have been awaiting movement for some weeks. It is confidently believed that the worst of the difficulties in getting cars to dealers have passed and from now on there will be noticeable improvement. Driveaways are reported to be decreasing, and while fewer cars are being sent by boat, that factor in transportation is still important.

All branches of the industry show a healthy condition. Trucks are meeting with better demand and plants are reporting increased operations. Tire makers are now working on improving their finished inventory situation to forestall any possible shortage. In the parts branch manufacture is progressing with much less shrinkage than had been expected, and shipments are being made on practically the same basis as in the past. Collections show an improvement over last month.

USED CAR MANUAL IS NEARLY READY

NEW YORK, Dec. 1—The Manual of Used Car Co-operation, compiled by the National Association of Automobile Show and Association Managers, will be off the press within a few days, when it will be available for trade association secretaries and dealers desiring to study it for suggestions regarding used car co-operation in their communities.

The manual, a 16-page book, has been priced at $2, which covers the cost of compilation, printing and distribution.

The book confines itself to one subject: that is, to suggesting a definite method by means of which a dealer association or a group of dealers can co-operate to eliminate losses resulting from over-allowances on used cars. It contains all the necessary forms for a co-operative plan and instructions for using the forms.

Its authors are Herbert Buckman, manager, Cleveland Automobile Manufacturers and Dealers Association; L. B. Sanders, secretary, Boston Used Car Statistical Bureau, and Neal G. Adair, editor Motor World and executive secretary, National Association of Automobile Show and Association Managers.

The book may be obtained by application to the association, 239 West Thirty-ninth Street, New York.

NEW NAME IS GIVEN TO EQUIPMENT BODY

CHICAGO, Dec. 4—A new name, Automotive Manufacturers' Association, was adopted at a meeting here by the organization heretofore known as the Association of Automotive Equipment Manufacturers. New constitution and by-laws also were adopted.

This association has been in existence since 1916, but until early this year its activities were confined chiefly to Chicago. It has now become a national organization with nearly 100 members. George Fritz is the general manager. New officers and directors under the new constitution are to be elected within the next 60 days. General offices are maintained in the Consumers' Building, Chicago.

OUTPUT OF 2,400,000 EXPECTED BY REEVES

Ten Per Cent of Total Year's Production, He Says, Will Be Trucks

NEW YORK, Dec. 4—After spending two weeks on the road visiting from 25 to 30 plants in Ohio, Indiana, Illinois and Michigan, Alfred Reeves, general manager of the National Automobile Chamber of Commerce, is back at his desk again, convinced, as a result of his trip, that 1922 production will reach the record-breaking total of 2,400,000, of which approximately 10 per cent will be trucks.

"I found that business generally has had a chance to get its second wind, live down many of the mistakes of the past and get set for 1923," commented Reeves. "Next year promises to excel 1922 provided we can get enough closed bodies. That's the rub."

Reeves continued with saying:

The whole industry now has a new market in the demand for the closed car. This market will increase rapidly as the prices get closer to the open car prices, and especially where the roads are improved. Closed car production in 1919 was 10 per cent of the total; in 1920, 17 per cent; in 1921, 22 per cent, while this year it will exceed 25 per cent, with the last quarter's production running 31 per cent of the total. In time it is expected that more than half the production will be the closed or year-around type.

Distribution Big Problem

Next year will find engineering and production on a very efficient basis, but distribution will be the big problem for all manufacturers. While thousands of dealers have gone out of business, the ranks have been pretty well replaced by new ones so we now have more than 33,000 merchants retailing motor cars and trucks, all of whom must be aided by the manufacturer in connection with financing his stocks and passing the vehicles on to the public.

We will see still greater production next year, especially during the first six months, provided enough closed bodies are available. The industry normally makes 25 per cent of its year's production in the first quarter, 31 per cent in the second, 24 per cent in the third and 20 per cent in the last quarter. The last quarter this year will be better than the average.

Farmer buying will make for an increased production next year. His crops this year will bring a billion and a half dollars more than last, and he must have cars and trucks.

The truck industry is more promising than it has been for some time but it needs more and better dealers and the elimination of some bad practices that have crept in during the depression, especially the selling of trucks on too small a first payment, with too long a time for full payment.

Shop Equipment Credit Plan

CHICAGO, Dec. 2 — Canedy-Otto Manufacturing Co. of Chicago Heights, manufacturer of shop equipment, has put into operation a credit plan that permits the sale of its equipment by jobbers on time payments. The plan is underwritten by the Continental Guaranty Corp., New York.

MAKERS SPEEDING UP DELIVERIES OF CARS

Forestalling Winter Complications—Big Schedules Shown for December

DETROIT, Dec. 1—Production figures for factories in the Detroit district show November to have run considerably ahead of production in November, 1921, and to have maintained a pace which will give the industry another approximate 200,000 month. Manufacturing in December will show a gradual decline, owing to the lateness of the season and the holiday inventory period, but will compare favorably with any other similar month.

While there is continued large buying of closed models, most of the open cars are going to dealers for stocking over the turn of the year. This is especially true in the middle priced field, there being still large buying of open models in the low and better priced lines. Price changes and new models in a number of lines have kept a larger volume of business coming through than usual at this time of the year.

Pushing Through Cars

Manufacturers generally are rushing through a large number of cars before winter weather complicates the railroad situation. Shipping during the early months of the year may be greatly curtailed because of the rail situation, and it is desired to provide ample stocks against this. There is, however, a large amount of ready business, and schedules are very conservatively based.

Ford sales during the month will exceed 100,000, practically all of which are in the domestic field and due largely to the recent price cut. Sales following the reduction have exceeded expectations and will necessitate the manufacture of 100,000 vehicles in December despite inventory period. Closed car business is about 25 per cent of the total. Tractor manufacturing is approximately 200 daily.

Schedules for Month

Chevrolet is building 1200 cars daily and is increasing this total. Business is running strong on closed cars, and orders are several months ahead in practically every model. There is a large ready market for its open models, and the company is intensifying its sales efforts in all territories.

Companies manufacturing closed cars of the utility type report these behind orders in almost every instance. From ten to thirty days are required for deliveries. In this group are Dodge Brothers, Maxwell, Hupp, Dort and Studebaker. Schedules in these plants on all models show Dodge Brothers to be manufacturing about 500 daily; Maxwell, 200 daily; Hupp, 100; Dort, 100, and Studebaker, 400, in all plants.

Buick is continuing heavy production. Schedules in all plants, including Canada, approximate 600 daily, a large part of which is in its touring sedans. Hudson and Essex are building about 250 daily with coach models leading in popularity. Closed car Hudson and Essex business is now close to 60 per cent.

Better priced lines are running close to capacity. Cadillac with new low prices in effect is building about 100 daily, and will increase this total in December. Packard is increasing its production in December to 2250 a month, a 25 per cent increase over its earlier year schedules. Lincoln production at the rate of about 30 daily is sold through the winter. Wills Sainte Claire, despite its temporary financial difficulties, is operating at the rate of about 20 cars daily.

Oldsmobile and Oakland are continuing operations at the rate of about 100 daily. Paige-Jewett schedules call for production of about 100 a day. Reo is approximating 100 daily in cars and speed wagons. Rickenbacker is building about 20 cars daily and has scheduled 10,000 cars for 1923, or 40 daily. Durant is approximating 100 daily each in both Durant and Star models. Gray is building 100 daily and will increase this steadily to more than 200 daily by Jan. 1.

Earl Motors, under the change in control which places George C. Scobie in the presidency, is outlining an extensive production for 1923 and is gradually increasing operations. Columbia has outlined a schedule of about 28,000 for 1923, on which it is now beginning. Liberty is now arranging for its 1923 output and is operating on a regular winter schedule.

Dort Reduces Debt

DETROIT, Dec. 4—Dort Motor Car Co. during the year has made a 50 per cent reduction in its indebtedness of more than a million and a half, according to a statement by F. A. Aldrich, treasurer of the company, to financial and commercial companies. This is regarded as highly satisfactory by the company.

FIRST OFFENDERS TO BE PLACARDED

SACRAMENTO, CAL., Dec. 2—San Diego has put into effect a plan proposed by F. H. Bacon, mayor, for the checking of motorists with a tendency to speed, which is to be adopted by other cities in the State, according to reports filed with the State Motor Vehicle Department here.

The plan is to attach to the front and rear of the speeder's car a large red placard bearing the word "DANGEROUS" printed in black. The judges give first offenders the option of carrying this placard for a certain number of days, or going to jail for a similar period. Second and third offenders get the jail sentence, without the option of being tagged as dangerous.

EDUCATORS DISCUSS SERVICE TRAINING

Federal Board and Industry Cooperate to Establish Adequate Standards

DETROIT, Dec. 4—As a result of the educational conference at the Hotel Tuller, the Federal Board of Vocational Education will undertake to establish a contact between those interested in automobile mechanical education and the automobile industry. The objective of this contact is to learn from the industry what the industry wants and expects from the automobile mechanical schools.

The conference was called by the Federal Board during the Regional Conference in Vocational Education, and this one session was set apart for the discussion of automotive educational problems. Seventy educators and representatives of the industry registered, and practically all of those present spoke during the day. Frank Cushman of Washington, chief of the Industrial Education Service, presided and directed the discussion along progressive lines. J. C. Wright, director of the Federal Board of Vocational Education, was present much of the time and personally accepted the task of forming the contact as outlined in the following resolution:

Resolution of Conference

Be it resolved, that it is the consensus of opinion of the conference held in Detroit, Nov. 29, 1922, for the purpose of considering job specifications and standards of training for automotive repair men, called by the Federal Board for Vocational Education and and participated in by representatives of State departments of vocational education, representatives of the National Automobile Chamber of Commerce, the Society of Automotive Engineers, public schools, the Y. M. C. A., the K. of C., private automotive schools, automotive manufacturers and other automotive interests that as, at the present time, there seem to be no adequate standards of training for this important and rapidly growing phase of the transportation field, and as some adequate standards are greatly needed, the Federal Board for Vocational Education is urgently requested to give active consideration to the problem and to make contact with such national organizations in the automotive industry as have a common interest in the problem, to the end that some agreement may be reached which will function on a national scale for improving the training of repair men for the automotive industry and the upgrading of those in service in this field.

Be it further resolved, that copies of this resolution be sent to each of the members of the Federal Board for Vocational Education.

Adopted Enthusiastically

The resolution was enthusiastically adopted and Wright accepted the assignment. He said it was his belief that this movement would fit into other work under way by the board and that it was of great industrial importance that the education should be adjusted to the practical needs of the industry, and in this way gain the confidence of the industry.

FORBES IS SELECTED AS PIERCE PRESIDENT

Succeeds Col. Charles Clifton Who Continues Chairman of Board

BUFFALO, Dec. 2—Continuing Col. Charles Clifton as chairman of the board, the Pierce-Arrow Motor Car Co., has named Myron E. Forbes president of the company, thus relieving Col. Clifton of detail work and leaving him a free hand to map out and direct the policies of Pierce-Arrow. Forbes has been prominently identified with the company as treasurer, vice-president and chief executive. He will be succeeded as treasurer by S. O. Fellows, formerly comptroller.

This division of labor is interpreted to mean that Col. Clifton has completed his work of reconstruction undertaken two years ago. Prior to that time he had retired from the presidency to become chairman of the board alone, but the affairs of the company were in such shape that the directors prevailed upon him to return to the head of affairs and reorganize things. With that in mind he has put in a busy two years. Now, it is said, the company is in good shape and the colonel feels that he can give up the presidency and remain as chairman of the board.

Receiver for Wills

DETROIT, Dec. 4—Security Trust Co. of this city has been named as receiver for C. H. Wills & Co., Marysville, Mich., manufacturer of the Wills-Sainte Claire. No statement of assets and liabilities has been filed, but it is understood that the company owes the banks about $6,000,000.

President Wills declares the company is solvent and that the receivership is a friendly one, brought about for reorganization purposes. At present the receiver is making an inventory, and it is expected that production will continue without interruption.

CARS INCREASE TRADE OF STORES IN CITIES

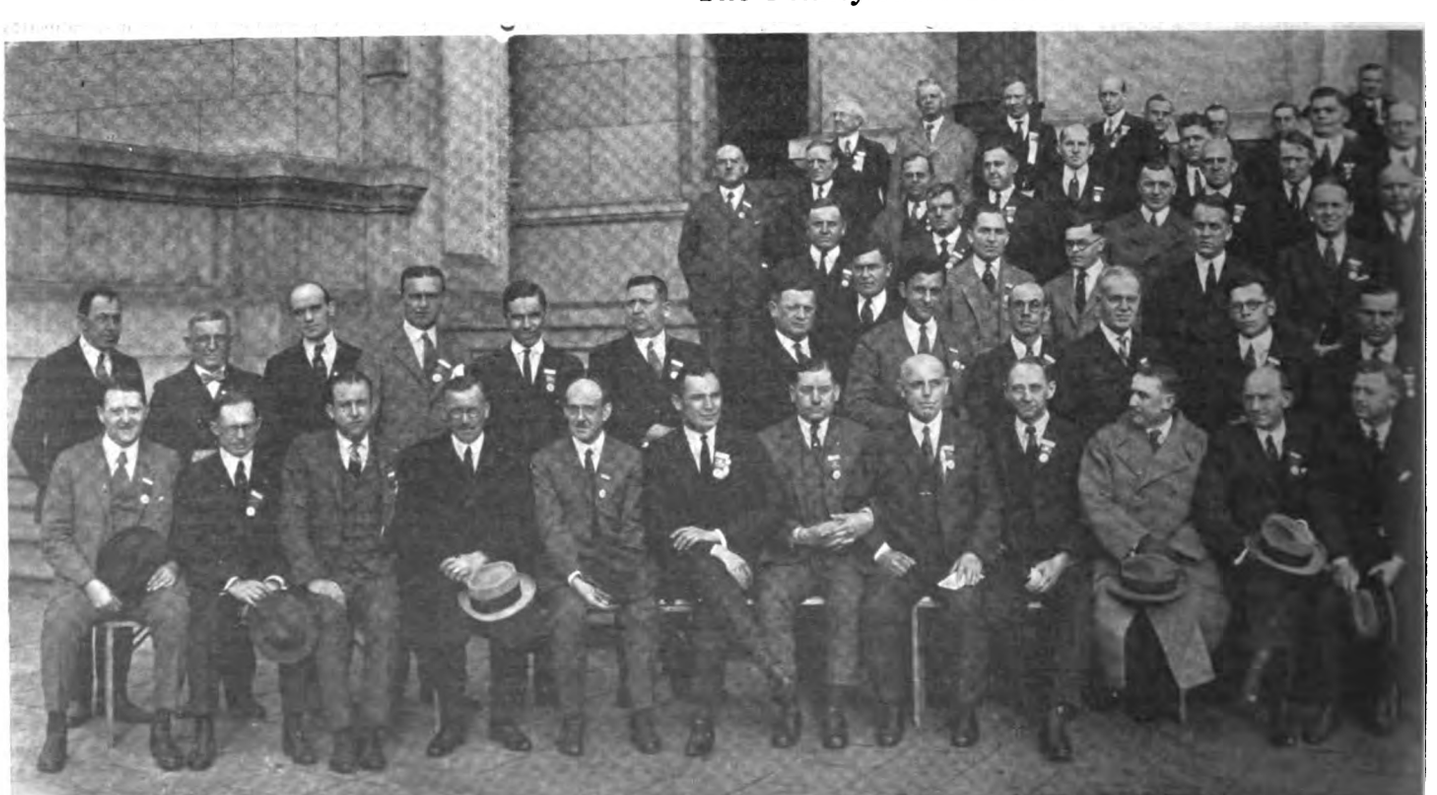
MILWAUKEE, Dec. 4—Protestations from the city of Milwaukee that under the present system of proportioning state, county and city aid for highway construction, the city is compelled to bear an abnormal burden to the advantage of taxpayers in the rural districts, have resulted in investigations tending to show that the centers of population actually derive the major benefit.

Members of the county board of supervisors declared that in conversation with the heads of three of the largest department stores in Milwaukee, they were informed that because of the improved highways leading from all points in the county to the city, their trade has increased approximately 100 per cent.

FISHER BODY REPORTS SURPLUS FOR QUARTER

Amounts to $2,852,964 Which Is Big Gain Over Previous Three Months

DETROIT, Dec. 4—Fisher Body Corp. and subsidiaries, exclusive of the Ohio company, report for the three months ended Oct. 31 last, a surplus of $2,852,964 after charges and Federal taxes, equal after preferred dividends to $5.70 a share earned for the 500,000 shares of no par value common stock outstanding. In the previous three months surplus of $1,733,433 or $3.46 a share on the common was reported, and in the corresponding period last year, surplus of $1,939,541, or at the rate of $3.75 a share on the common was shown.



For the six months ended Oct. 31, surplus of $4,586,394 remained after preferred dividends, equivalent to $9.16 a share on the common as compared with $3,151,777 or $6.06 a share in the same period a year ago.

For the quarter ended Oct. 30 last, the Fisher Body Co. of Ohio, reported net earnings of $329,293 after taxes, depreciation and interest.

Named A. E. A. Vice-Chairman

NEW YORK, Dec. 1—A. D. McMullen of the Motor Mercantile Co., Salt Lake City jobber, has been elected vice-chairman of the board of directors of the Automotive Equipment Association.

EXPECTS FOUR-WHEEL BRAKES TO INCREASE

Rickenbacker, Back from Europe, Says Most Cars Here Will Use Them

NEW YORK, Dec. 4—Four-wheel brakes will be on most American cars within three years, predicts E. V. Rickenbacker, vice-president of the Rickenbacker Motor Co. of Detroit, just back from an extended European trip, which included both the French and English shows.

American traffic conditions, he contends, will force their adoption and they will be just as essential as the self-starter. The need for acceleration in traffic and the control they give are the factors that will bring about their adoption, he thinks.

Rickenbacker says:

In both England and France I found the four-wheel brake coming into general use. Even cars as light as 1000 and 1200 pounds are using them. I should say that a majority of French makers have taken them up. And I believe that some of our own manufacturers are quietly investigating this European practice, for I heard of one big concern, whose representatives were abroad at the same time I was, which bought three of the French front wheel brake patents recently.

I found a great interest in racing, and I think Fiat, Mercedes, Benz, Peugeot, Bollot and others will enter the Indianapolis race.

I feel that racing would re-stabilize our industry abroad, for our engines are not economical enough now for the foreigners.

DIVISIONS FEATURE SHOW IN CINCINNATI

CINCINNATI, Dec. 4 — Range and variety of exhibits featured the second annual Automotive Accessory and Radio Exposition held here.

There were seven distinct divisions—an automobile section, in which latest models of cars were shown; a truck and tractor section; the parts and accessories division; radio section; motor wearing apparel section; an automotive educational section, and the amusement section.

Free instruction and advice to all visitors seeking automotive information and an exhibit by the Federal government relating to good roads were unique features of the educational section.

The exposition was held under the auspices of the Cincinnati Automotive Trades Association, John J. Behle, manager.

Barley Treasurer Dies

DETROIT, Dec. 4—Charles E. Stephenson, treasurer of the Barley Motor Car Co., died at his home in Kalamazoo after a short illness. He was 47 years of age. He was engaged in business in Kansas City, Kan., and at Streator, Ill., before coming to Michigan.

COLUMBIA HAS PLANS FOR 27,000 IN 1923

Company Reports Having Made Sales Connections in Important Cities

DETROIT, Dec. 24—Columbia Motor Car Co. is scheduling a production of 27,000 cars for 1923 and will start operations on that basis the first of the year, according to a report to stockholders mailed this week.

Many new sales connections have been made in important cities, the statement declares, and these with development of merchandising plans will absorb production.

Among the cities in which dealer contracts have been signed are Atlanta, Chicago, Indianapolis, Milwaukee, Philadelphia, New York, Brooklyn, Portland, Oregon, Seattle, Spokane, Boston, Detroit, St. Paul, Portland, Me., and Bangor, Me.

A strong foreign sales organization is being formed, the company asserts, tentative contracts being closed and sample car shipments made to over 35 export territories.

Receivership for Ranger Maker

HOUSTON, TEX., Dec. 4 — Southern Motors Manufacturing Association, maker of Ranger cars, trucks and tractors, is in the receiver's hands following the filing of a voluntary petition.

OFFICIAL SUGGESTS PEDESTRIAN CONTROL

Police Commissioner in New York Thinks It Would Relieve Congestion

NEW YORK, Dec. 4—Traffic cops on the sidewalks to control pedestrians and headlights for the officers are two reforms being considered by Police Commissioner Enright in his efforts to solve the congestion problem which has so alarmed city officials. With this end in view, he is drafting a set of sidewalk traffic rules which will apply only to pedestrians and which will be rigidly enforced, he says.

With New York doubling the number of its automobiles every three years, he realizes that drastic steps must be taken to make it possible for residents of the city to use the streets and sidewalks. So serious does he consider the situation that he says it may be necessary to eliminate the sidewalks on Fifth Avenue and Broadway and give the whole width of the streets to vehicular traffic. To care for pedestrians he would build the sidewalks along the first floors of the stores and office buildings, allowing the stores to display goods in an arcade effect.

Enright also suggests taking down the Second and Sixth Avenue elevated lines and placing them underground with four tracks each. An elevated structure along West Street, the most congested thoroughfare in the city, is favored. This, Enright thinks, should be at least 80 feet wide and extend from the Battery to Seventy-second Street, with runways that would connect West End Avenue and Riverside Drive with Broadway.

TANK-WAGON PRICE OF GASOLINE LOWER

NEW YORK, Dec. 4—Statistics gathered show that at the present time the tank-wagon price of gasoline in 30 cities averages 19.4 cents per gallon, which is 3.5 cents a gallon below mid-August and 5 cents under 1922's high of 24.4. This also is eight-tenths of a cent under the low of 1921 and about 10 cents under the average of 29.3 on Jan. 1, 1921.

The present tank-wagon prices in the leading cities are: Atlanta, 19; Baltimore, 21.5; Birmingham, 17; Boston, 24; Butte, 22.5; Chicago, 18; Cleveland, 20; Dallas, 20; Denver, 19; Des Moines, 19.1; Detroit, 19.4; Houston, 19; Indianapolis, 18.8; Kansas City, Mo., 17.5; Louisville, 19; Memphis, 15.5; Milwaukee, 18.6; Minneapolis, 19.5; Newark, 21.5; New Orleans, 16; New York City, 24; Omaha, 18.25; Philadelphia, 21; St. Louis, 18.2; St. Paul, 21.5; San Francisco, 19; Seattle, 21; Tulsa, 16; Vicksburg, Miss., 17; Wilmington, Del., 21.

Stutz Distributors Meet Schwab

In connection with the sales conference held at the factory in Indianapolis, a testimonial dinner was tendered Charles M. Schwab, who has a controlling interest in the Stutz Motor Car Co. of America, Inc.

This picture was taken in front of the executive building at the Stutz plant and shows in the front row, reading from left to right: I. B. Meers, district manager; W. A. Pungs, Jr., Detroit; E. T. Klee, purchasing agent; F. D. Cerf, Chicago; Fred Wilson, sales manager; H. R. Fletcher, New York; Charles M. Schwab; President W. N. Thompson; William Glickert, factory superintendent; Charles V. Scensa, Buffalo; H. R. Hyman, advertising manager; Harry W. Anderson, district manager; back row: R. H. Schmittdiel, Detroit; J. K. Graves, Nashville; George Kaeser, Hartford; H. R. Wilson, Bethlehem, Pa.; L. V. Bedell, assistant treasurer; George Hooveler, Pittsburgh; Stanley Whitworth, assistant manager; H. S. Thomas, Cleveland; George Norwood, Baltimore; R. D. Baughman, Akron; Earl Devore, order department; Earl Stone, district manager; J. C. Pearson, traffic manager; Bohn E. Fawkes, Minneapolis; L. W. Frizzell, Mansfield, Ohio; Fred Johnson, assistant sales manager; L. D. Brown, service department and William Blair, Buffalo.

TIRE MAKERS PREDICT INCREASE IN PRICES

Each Producer Apparently Is Waiting for Lead to Come from Competitor

AKRON, Dec. 4—Practically every tire manufacturer in the Akron district is frank to admit that tire price increases are entirely logical and almost certain to come within the next 30 days; but none, apparently, is ready to initiate the movement, each manufacturer waiting for the lead to come from his competitor.

The 10 per cent tire price increase announced by the Kelly-Springfield company was not close enough at home to cause Akron manufacturers to fall into line. It will take an announcement by one of the major companies here to start the upward revision of prices, and when that initial announcement comes, a grand rush may be expected.

A survey of Akron manufacturers shows that practically all of them hold the opinion that prices should be raised. They cite the fact that the price of crude rubber has increased more than 10 cents a pound in the last 30 days because of the Dutch-English agreement to curtail production. The curtailment followed the passage of the British Stevenson law, whereby an export tax is laid on all crude rubber exported, with graduation upward as the amount of crude rubber produced increases.

Cotton Prices Higher

At the same time the increase in the price of cotton fabric for tires is cited as making a tire price increase logical. And, in addition, to these, has been a gradual increase in the cost of labor, all three factors having cut the tire manufacturer's margin of profit to a minimum.

Present tire prices average about 40 per cent below the peak prices charged for automobile tires, while they are from 10 to 15 per cent below pre-war prices, when tires did not give more than half the mileage guaranteed for the tire today.

Dealers throughout the country are displaying more optimism and are less conservative in ordering supplies of tires and tubes. Last spring, overly cautious on account of the complicated conditions which arose from the tire surplus which existed, dealers ordered conservatively and sought quicker turn-over of stock on their shelves. In many instances they found they had been too conservative.

Kelly Tire Prices Increased

NEW YORK, Dec. 4—Announcement is made of a 10 per cent horizontal increase in the prices of casings, tubes and truck tires by the Kelly-Springfield Tire Co. This applies only to dealers' orders placed in December. Higher prices of rubber and cotton are said to be the reason for the increase.

LOS ANGELES SHOWS CARS IN FOUR TENTS

Despite Fifty-Cent Admission Charge, Attendance Is Largest on Record

LOS ANGELES, Dec. 4—From every viewpoint the Los Angeles automobile show was the most successful ever held. Despite the fact that a fifty cent admission fee was charged, the crowds were the largest on record. Four tents having an aggregate of 135,000 sq. ft. of floor space proved inadequate. The attendance was so large that dealers said it was almost impossible to give prospective purchasers the attention they deserved. This handicap, however, did not prevent more actual orders being taken than in any previous event.

Forty-four passenger car dealers showed 61 different makes. Twelve truck dealers displayed 14 makes, with a total of almost 300 vehicles exhibited. There were twenty-two 4-cylinder, thirty-six 6-cylinder, twelve 8-cylinder, and one 12-cylinder types of engines.

The first showings of new models was much larger than is customary. Latest types of Chalmers, Hupmobile, Star, Barley, Durant, Jewett, Cleveland, Rolls-Royce, Rickenbacker, Earl, Peerless, Dort and Stearns made their first appearance before the public.

In previous shows it has been thought necessary by the exhibitors to dress up their cars but the special job was an exception this year. Only a very few de luxe models appeared, and in the main these were close to stock with the exception of extra equipment. More sport models than ever were to be seen.

The show was staged without the services of a professional promoter. A committee selected from the Motor Car Dealers Association had entire charge. Burt Roberts, executive secretary of the association, acted as manager. Space was sold at $1 per sq. ft. Fifty per cent of the profits will go to the association and the remainder refunded to members of the association in proportion to the amount of space they purchased.

RICHMAN PURCHASES BUSINESS ON COAST

SAN FRANCISCO, Dec. 5—One of the largest deals, financially, recorded in automotive circles in northern California in some years, was consummated when Richman Motor Co. bought for cash the business of the Charles H. Kaar Motor Co. The appointment of the Richman company as distributor of the Rickenbacker car in northern California goes with the sale.

The principals in the new firm are well known in automotive circles in California, and throughout the West. Charles S. Richman, president and general manager, has been the owner of the firm of Johnson & Richman, one of the largest automobile repair shops in San Francisco. He will take personal charge of the service department and the repair shop.

F. B. Kip, vice-president and wholesale manager, was retail sales manager for the Lozier Co., in New York in 1908 and later became manager for the Chandler Motor Car Co. Louis Cohen, secretary and sales manager, has been identified with the trade in San Francisco since 1900.

PENNSYLVANIA JOBBER HOLDS A. E. A. MEETING

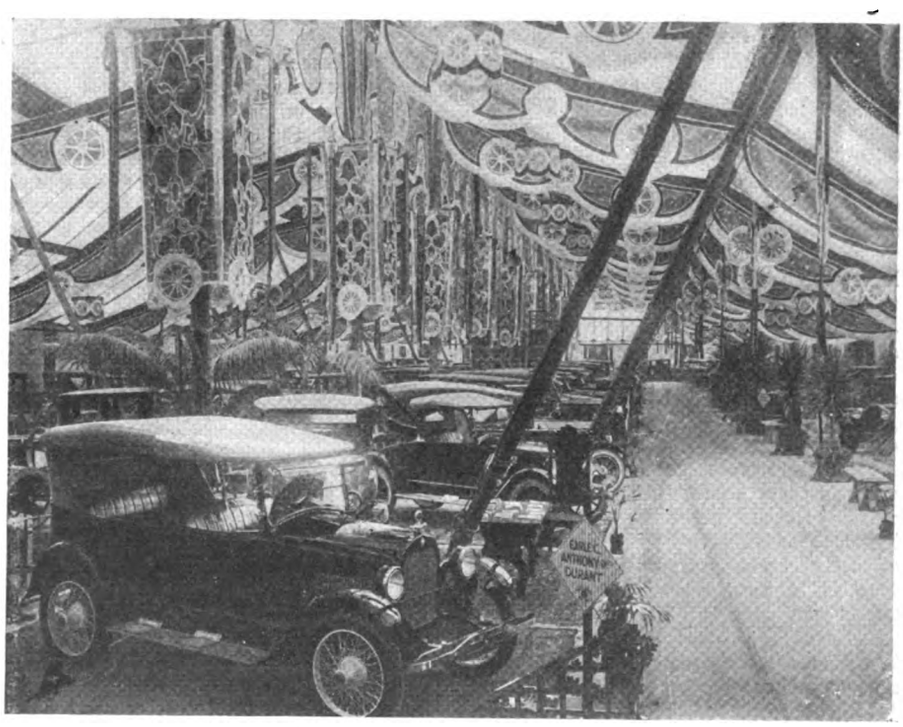
JOHNSTOWN, PA., Dec. 4—Ray W. Sherman, merchandising director of the Automotive Equipment Association, addressed more than 100 employees of the Johnstown Automobile Co., distributor of automotive equipment and Cadillac cars. Eight Cadillac dealers from the Johnstown territory were also present.

Cadillac's new film, or "The Story of a V-Type Eight-Cylinder Motor Car," which will be shown in collaboration with the United States Department of Commerce, was given its first showing in Pennsylvania. W. W. Lewis, District Manager of the Cadillac central territory, spoke. The "Shop Profits" film also was displayed.

Sherman came here in company with George L. Brown, a former A. E. A. director, and J. H. Leppert, a director in the Pennsylvania Automotive Association, both of whom are connected with the sales department of the Johnstown company. All three had been in attendance at the State convention at Harrisburg.

BOOSTING OPEN CARS WHILE SHORTAGE LASTS

Dealers, Unable to Get Closed Models, Intent on Making Sales Anyway



KANSAS CITY, MO., Dec. 4—American Royal Week in Kansas City, when the first of the enlarged stock show and merchandise exhibits was held in the newly constructed building here, was made the occasion by the Kansas City Motor Car Dealers Association for displaying closed cars.

The cars were exhibited in the various dealer establishments, where special pains were taken to provide closed models. The total results were good, the week's sales having far exceeded those of any previous American Royal Week, or previous week of the same calendar days. There were handicaps, however, chief of which was the shortage of closed models.

The holding of the show undoubtedly has stimulated interest in both open and closed models, even though many of the visitors to the showrooms may do their buying in their home towns.

The holding of the show forced the dealers to take steps to offset the heavy call for closed models this winter that cannot be met completely. It demonstrated that there are a great many people actually ready to buy new cars; and it is obviously up to the dealers to find ways to sell them the models they can get, whether closed or open.

"See America" Tent at Los Angeles Show

This tent in the Los Angeles show typified "See America." The side walls were painted with scenic views and the liberal use of automobile wheels in the decorations left clear the significance as to the proper way to "See America"

FAR WEST MAY HAVE SAME GASOLINE TAX

Governors Will Urge Levy of Two Cents—Also Will Unite on Anti-Theft Law

SAN FRANCISCO, Dec. 4—A tax of two cents per gallon will be placed on gasoline next year in eleven western states, if the governors of those states are able to press such a law through their respective state legislatures.

This agreement among the executives of California, Arizona, Nevada, Colorado, Idaho, Montana, New Mexico, Washington, Utah, Oregon and Wyoming was reached at a conference held in this city, attended by Governors Louis Hart of Washington; Emmet D. Boyle of Nevada and William D. Stephens of California and the secretaries of the other eight governors, the executives themselves being in attendance at the Colorado River conference at Santa Fe, N. M., and unable to leave. Funds from this tax are to be applied to building and maintenance of roads.

Anti-Theft Legislation

The governors and their representatives also decided to present to their respective legislatures, as soon as it could be drawn, a uniform law for the pursuit, arrest, identification and punishment of automobile thieves seeking to escape by fleeing from state to state, or driving stolen cars from state to state in an effort to sell them.

The gasoline tax law will be copied after the one now in force in Washington, Oregon and Arizona, but all the governors will co-operate on an automobile theft law under which pictures and identification tags of known automobile thieves and of suspects will be broadcasted to the police of all these states immediately on the theft of a car, with full information concerning the car, and, if possible, a photograph of it.

Under this head also, comes a plan for a state automobile constabulary, mounted on motorcycles, for the patrol of the highways and the immediate pursuit of automobile thieves. In so far as possible state lines will be eliminated in the work of these mounted police, by making them members of the force of each state in the agreement.

Uniform Traffic Laws

More equitable automotive taxation, and uniform traffic rules for all the states also are to be considered by the legislatures of each of the eleven states at their coming sessions. The present plan is to have a later conference between members of the legislatures of these states, to draft uniform laws and to arrive at an agreement on more equitable taxation.

The meeting of the governors was brought about by the state automobile trade associations of Oregon, Washington and California. The program laid before the conference was drawn up by representatives of these associations, who met in the Palace Hotel here the day before the conference, at the call of L. E. Titus, president of the Washington Automotive Trade Association, and Robert W. Martland, secretary-manager of the California Automobile Trade Association.

The governors uniformly favored the plans presented.

Automobile trade association men who drew up the program, besides Titus and Martland, were L. W. Harkins, chairman of the Executive Board of the Washington Automotive Trade Association, and William A. Simonds, secretary of the same body; James H. Cassell, manager of the Oregon Automotive Trade Association, and Walter Fawcett, chairman of the Legislative committee of the California Association.

The outstanding result of the conference is a uniform movement among all eleven of the western states for uniform tax on automotive vehicles; uniform traffic and automobile theft laws, and a tax on gasoline which shall be the same in all the States.

COUZENS SELECTED FOR U. S. SENATE

DETROIT, Dec. 2—The name of James Couzens, mayor of Detroit, as United States Senator from Michigan to succeed Truman H. Newberry, places in the Senate one of the foremost automobile men of the country, and as such the appointment is regarded very favorably by the industry.

Couzens became identified with Henry Ford in the early days of the Ford Motor Co. and was Ford's chief executive for many years. His original investment in the company brought him about $29,000,000 when he sold out.

Since leaving Ford Couzens has been elected Mayor of Detroit, devoting practically all of his time to the duties of that office.

Buick Texas Dealers Confer

SAN ANTONIO, Tex., Dec. 5—Buick dealers from all sections of the Southwest Texas territory were in convention here this month. Dealers and salesmen mingled with home office men, heard the main features of the Buick explained and learned of the extensive sales campaign which is to be launched next year. The next meeting will be held at El Paso.

Wayne Tank Has Convention

FORT WAYNE, IND., Dec. 4—Managers of the district offices in the United States and Canada of the Wayne Tank & Pump Co. held a three-day conference at the home office here recently. The new office building of the company is now completed, and the various departments are being transferred to the building.

MURPHY WINS TITLE AS YEAR'S CHAMPION

Captures Los Angeles Event, Which Is Last on Racing Schedule of A. A. A.

LOS ANGELES, Dec. 3 — Jimmy Murphy, the only American to win a foreign road race—the French Grand Prix last year—added to his laurels this afternoon by winning the 250 mile race at the Beverley Hills speedway, the final event on the A. A. A. championship schedule. The victory carried with it the title of champion driver of the year, Murphy finishing the season with a total of 3420 points to his credit, gained through winning six firsts, three seconds and one third in the twelve championship events contested during the year.

Since winning at Indianapolis, Murphy never has been headed in the title race, finishing 1510 points ahead of Tommy Milton, last year's champion. Harry Hartz is third in the championship table with 1788 points; Elliott, fourth with 875; Hill, fifth with 459, and Hearne, sixth with 383.

Earl Cooper Second

The race to-day was postponed from Thanksgiving Day because of rain, but the postponement did not detract from the public interest, the attendance being in excess of 80,000. Murphy, driving a Durant Special instead of the Murphy Special which he has been piloting all season, was hard pushed to the very finish, beating Earl Cooper, also in a Durant Special by only a slight margin.

A skid near the wire threw Hartz into the wall, but the car bounded back on the course and slid across the line into third place and only 20 feet back of Cooper, who was only a car's length back of Murphy. The 250 mile race was driven in 2 hours, 10 minutes, 53.10 seconds, an average of 114.6 m.p.h., or 3.4 miles faster than Murphy's record, made at San Francisco last year.

Hill, Hilton and Klein finished fourth, fifth and sixth.

ADDITIONAL BRANCHES OPENED BY CHEVROLET

DETROIT, Dec. 4—Chevrolet Motor Co. has opened new wholesale offices in Philadelphia and Charlotte, N. C., for the general supervision of wholesale business in these territories. The Philadelphia office will be in charge of Harry L. Porton, sales manager, and will cover the territory in eastern Pennsylvania, most of New Jersey and all of Delaware.

Chevrolet dealers in Pennsylvania and New Jersey will be advised by special bulletin as to the specific limits of the Philadelphia territory. The Charlotte office will be in charge of L. F. Garlock and will control territory in North and South Carolina.

CHANGES IN THE TRADE

Cooley Motor Co. has taken the agency for the Gray in Westfield, Mass.

Russell Motor Car Co., Columbus, has been made central Ohio distributor for the Dort.

H. B. Tait & Co., Columbus, has taken over the distribution of the Nash line for Central Ohio.

The Buck Company, Studebaker dealers in Indianapolis, have taken the State distribution of Dort and Chandler.

Clarence M. Wellman has bought the Roberts Garage in Brattleboro, Vt., and will remove his Exide battery station there.

W. H. Krueger Motor Co., Milwaukee, has been appointed distributor of the Columbia in Wisconsin and Upper Michigan. The Krueger company has been for many years distributor of the Cole and retains this connection.

Fauntleroy Motor Co. has been incorporated for $100,000, with **Thomas T. Fauntleroy** and **Percy Richter** as incorporators, to sell Ford cars, trucks and tractors in Cincinnati.

Peck & Adler Co. of Syracuse has taken over the agency for the Davis car in nine counties in that part of the State. The company also has the agency for the Westcott car in four counties.

Service Chevrolet Co. has been chartered at Youngstown, Ohio, to operate a sales agency and service station by **Charles Deibel, F. C. Joyce, D. P. Conway, Walter Pritchard** and **Kathryn A. Kirchner.**

Frank W. Hayes, pioneer automobile man of Amarillo, Texas, has obtained the Oldsmobile franchises for northwest Texas and parts of New Mexico. He is now establishing agencies in a score of towns.

C. M. Bradford, Inc., of New Haven, Conn., will handle the Dorris with New Haven and Connecticut selling rights. In addition to the New Haven organization, Bradford intends appointing sales and service representatives in the larger cities of Connecticut.

A. A. Ledermann Co. has been appointed distributor for the Cleveland in Onondaga, Cortland, Cayuga, Madison and Oswego counties, New York. Ledermann has been in the automobile business since 1898, and for 17 years has been merchandising cars.

Lee Matthews, president of the **Matthews Motors Co.**, Cincinnati Overland and Willys-Knight distributor, has appointed **Charles Russell**, formerly manager of parts for the retail branch of **Willys-Knight, Inc.**, Toledo, as parts manager for the Cincinnati company.

T. J. Mariler Co., Milwaukee, has been appointed distributor of the D-A-C (Detroit Air-Cooled) car in the Wisconsin and Upper Michigan territory. **Ted J. Mariler**, head of the company, has been engaged in automotive service in Milwaukee for more than 15 years.

Union Motors Co., Inc., headed by **George Pearson, Jr.**, and **George Walling**, has been formed in Houston, Tex., to take over the Chalmers and Maxwell franchises for 27 counties. The company will organize the territory immediately and establish new agencies.

S. I. Kirby, a district sales representative for the Buick Motor Car Co., in Illinois from 1916 to 1919, and later assistant manager of the Buick Philadelphia branch, is now district sales manager for the Peerless in New Jersey. **L. H. Nelson**, Ridgewood, N. J., has taken on the agency of the Peerless.

Franklin Automobile Co. has appointed the following new dealers: **Franklin Motor Sales**, Quincy, Ill.; **Peabody Garage Co.**, Houlton, Me.; **Hill & Holgate**, Lockport, N. Y.; **Franklin-Marlboro Co.**, Marlboro, Mass.; **Franklin Motor Car Co.**, Poughkeepsie, N. Y. and **Franklin Coughenour Motor Co.**, Pittsburg, Kan.

H. A. Waldron, General Motors Building, Detroit, has been appointed by the **National Seal Co., Inc.**, of Brooklyn as its western sales manager for the sales of Sears-Cross locks for automobile bodies and its general line of automobile hardware. Waldron takes the place of **T. P. C. Forbes**, who formerly represented this company.

Smith-Sauer Motor Co., distributor for the Case car in Northern Illinois and Northern Indiana, has moved from 2534 Michigan Avenue, Chicago, to 2436-2438 Michigan Avenue. The new salesroom and service station is three times as large as the old. The move was occasioned by the growth of the company's business, which has more than doubled in the last eight months.

Dort Motor Car Co., announces the following new dealers: **Baird & Collins**, Sturgis, Mich.; **F. R. Hiner**, Plainwell, Mich., **Ora P. Stewart**, River Junction, Mich.; **Tuchtenhagen Garage**, Albion, Mich.; **Howard L. Smith**, Adrian, Mich; **Boulevard East Garage**, Guttenberg, N. J.; **Painter-Jones Motor Co.**, New Kensington, Pa.; **E. K. Eckelberry**, Republic, Ohio, and **Gehan Motor Sales Co.**, St. Paul.

Hepie Garage, Salinas, Cal., has been appointed Maxwell dealer. Other new dealers in Maxwell are as follows: **Anderson Motor Co.**, Winona, Minn.; **Mankato Motor Co.**, Mankato, Minn.; **J. G. Condiff & Sons**, Osawatomie, Kan.; **Palace Automotive Sales Co.**, Chester, Pa.; **Automotive Sales Co.**, St. Petersburg, Fla.; **Magill Motor Sales**, Monterey, Cal., and **Charles H. Kanehl**, Big Rapids, Mich.

Bruce E. Adams has been appointed manager of the Chicago branch of Rolls-Royce, succeeding **Howard S. Hamilton**, resigned. Adams is one of the pioneers of Chicago's automobile row, having become identified with the industry there as far back as 1906, with the Alco car. His last association, previous to accepting the Rolls-Royce appointment, was as manager of the Stevens-Duryea branch of Chicago. **R. B. Jackson**, western sales manager, has headquarters also located at the Chicago branch.

C. R. Teaboldt has been appointed manager of the Dort branch in New York to succeed **Frank C. Mattern**, resigned. Teaboldt has been affiliated with the sales end of the automobile business since the early days of the industry. Originally he was affiliated with the Thomas Co., and later joined the Packard in a managerial capacity. For four years he served as assistant general manager of Gaston, Williams & Wigmore, exporters. For two and a half years he has been connected with Dort in foreign and domestic fields.

F. A. Detwiler, for six years with the Maxwell-Chalmers Co., has been appointed district manager for the Atlanta territory of the Anderson Motor Co. His headquarters will be in Atlanta at the Hotel Winecoff. The **Anderson Motor Co.** announces the appointment of the **Garland Sales Co.**, Detroit, Mich., as distributor for Michigan and the Province of Ontario, Canada. **Berg Auto Co.**, St. Paul, will act as distributor in the St. Paul territory. The central Pennsylvania territory has been assigned to the **Ambler-Beaman Motor Co.**, Reading.

Western Iron Stores Co., Milwaukee, wholesaler and retailer of metal and woodworking machinery, mechanics' tools, transmission supplies, etc., has reopened its remodeled and enlarged store and display rooms. The corporation has been reorganized, with **John A. Camm**, formerly director of sales, **Kearney & Trecker Corp.**, manufacturer of machine tools, as president and general manager. **J. W. Van Horne** is general sales supervisor; **Walter E. Ethier**, vice-president in charge of purchases; **R. M. Friend**, treasurer, and **William Strickler**, supervisor of engineering service.

Roskam-Scott Co., Inc., 1846 Broadway, is Columbia's new distributor in New York. The principals are well known to the trade in Manhattan, although this is their début as a distributing organization. In Philadelphia the **Columbia-Kissel Motor Co.** has been organized to distribute the Columbia in that city and in eastern Pennsylvania. The new firm formerly was known as the **National Motor Sales Corp.**, distributor of the Maxwell-Chalmers line. **Kanouse Auto Co.** of Indianapolis has taken the Columbia franchise for that territory. The company also handles the Stephens, H. C. S. and Westcott.

Geo. H. Williams Co., Franklin distributor, and the **Sanger Automobile Co.**, Franklin dealer, Milwaukee, have consolidated their interests. The **Sanger-Williams Co.** has been incorporated in Wisconsin, with 1000 common shares without par value, by **George H. Williams** and **William F. Sanger.** The merged concerns will continue business at 485 Jefferson Street. The distributing territory embraces the southeastern section of Wisconsin. The Sanger company until about three years ago was exclusive Franklin distributor and dealer. Then the Williams company became distributor, dividing the retail business in Milwaukee city and county with the Sanger company.

F. M. Leeston-Smith, who has been with the Studebaker in Portland, Ore., almost continuously for ten years, has been named sales manager for the **John K. Leander Co.**, Studebaker dealer in Portland. Leeston-Smith held this position with the **W. C. Garbe Co.** for several years and until that concern went out of business a little over a year ago. He then went to the middle west, establishing a business as factory representative for automotive accessory manufacturers, with headquarters in Minneapolis. He recently sold out this business to return to Portland and take up work again with Studebaker. Clinton Hunter, who has been sales manager, has joined the Covey Motor Car Co. of Portland.

A. L. Bengle has been appointed Hudson and Essex dealer in the Indian Orchard district of Springfield, Mass. **T. J. Connelly**, formerly with the **J. M. Bownes Co.**, Pittsfield, Mass., has been allotted the Great Barrington territory. Other local dealers designated by **J. S. Harrington, Inc.**, Hudson and Essex distributor in Springfield, are: **Walnut Street Garage**, Palmer, Mass.; **William E. McGrath**, Ware and Monson, Mass.; **Frank W. Kellogg**, Feeding Hills, Mass.; **Merrill's Garage**, Thompsonville, Conn.; **John Daub**, Clarksburg, Mass.; **Ruther & Co.**, Williamstown, Mass.; **O. R. Hutchinson**, Lenox, Mass.; **Philip Robinson**, Blandford, Mass.; **Live Wire Garage**, Chester, Mass.; **Harold E. Perkins**, Huntington, Mass.; **Frank Helmes**, Russell, Mass.; **Madson & Fowles**, Southampton, Mass.; **Clifford W. Clark**, Woronoco, Mass.; **Herbert Hieres**, Granville, Mass.

ASSOCIATION ACTIVITIES

Louisville Car Week Results

LOUISVILLE, KY., Dec. 4—Results of Closed Car Week were highly satisfactory to the twenty members of the Louisville Automobile Dealers Association who took part in it. Fifty-three automobiles were sold, which dealers attributed directly to the results of advertising, publicity and special decorations.

In addition to these actual sales there were numerous prospects obtained. Stimulation of business generally has resulted it is felt by the association members. There is considerable talk among the dealers, in view of the success of the week, of staging a closed car show or salon in some central location next fall. Sentiment in favor of this project is developing rapidly, according to officials of the association.

It is believed that a fall show of closed car models similar to that held in many other cities would be of great interest to the public. No attempt would be made to stage it on the same large scale as the annual show in February. Less floor space would be needed, it is pointed out, than is used at the Armory, for the reason that only closed models would be exhibited.

Hay Speaks by Radio

CHICAGO, Dec. 1—Thomas J. Hay, president of the Chicago Automobile Trade Association, recently delivered an address on the magnitude of the automobile industry for broadcasting over the KYW radio station.

South Dakota Convention

SIOUX FALLS, S. D., Dec. 4—The first annual meeting of the Automobile Trades Association of South Dakota will be held in this city on Jan. 15. The membership mark is set at 1000, the enrollment now is 135. Preliminary steps to make a State-wide organization were taken at a meeting of 35 men representing seven towns of the State Nov. 24 in Huron. The directors chosen are: O. M. Phelps, Huron; Iver Dybdal, Brookings; H. J. Hanson, Watertown; E. R. Judy, Aberdeen and J. J. Carson, Wessington Springs. The directors elected Phelps president, Hanson vice-president and Judy secretary.

Dallas Changes Its Name

DALLAS, TEXAS, Dec. 4—The name of the Dallas Automobile Trades Association has been changed to the Dallas Automotive Trades Association. A new by-laws and constitution, which broadens the scope of activities of the association, has been adopted and provisions made for the employment of a full time executive secretary. He will take the place of the recording secretary and will be paid a salary of something like $3,000 to $3,600 per year.

In the future the association will meet twice monthly. The association hopes in the coming year to solve the used car problem, to work out a solution for collection of accounts and proper handling of notes given in payment of cars, to assist the authorities in meeting the theft question and to formulate a plan for co-operating with other associations of the State in the matter of going after helpful legislation and good roads.

The association will make an effort to have included in the membership during the coming year all automotive concerns of the city.

At the last meeting of the year held this week the following officers were elected for the coming year.

William Morriss, president; R. C. Langley, vice-president, and George W. Goodwin, secretary-treasurer. Morriss succeeds F. E. McLarty.

In addition to the newly elected officers and the retiring president, the following compose the board of directors: J. R. Bower, D. F. Burks, Don Safford, J. H. Shelton, W. G. Langley, J. H. Connell, H. L. Battle, H. E. Spencer, H. J. Cohen, Morgan H. Cox and A. A. Richeson. John A. Atwood was elected a life member of the board. The board will elect the executive secretary for the association.

Election Held in Portland, Ore.

PORTLAND, ORE., Dec. 2.—The following officers of the Portland Automotive Trades Association were elected for the coming year at the annual session of the association. President, V. C. Unden; first vice-president, L. L. Blumenthal; second vice-president, H. M. Nisbet; third vice-president, John Weber; secretary, Guy Spencer; treasurer, F. H. Hildebrand; directors, Don G. Bates and A. E. Foss. The organization has a large membership among all branches of the automotive industry outside the automobile dealers who have their own separate body in Portland.

Distributor Entertains Force

SPRINGFIELD, ILL., Dec. 4—Jennings Auto Sales Co., distributors of the Ford and Lincoln cars and Fordson tractors in this territory, entertained 60 members of its sales, service, assembly and shop departments at the Sangamo Club. Frank Jennings, president of the company, presided, and members of the forces were speakers.

G. M. Service Heads Organize

DETROIT, Dec. 2—Service managers and other men interested in the service problems of General Motors divisions have formed an organization to discuss individual questions and to pool their knowledge for the benefit of the service station and the "boss"—the customer. Under the chairmanship of M. W. Franklin, the organization has held its first meeting.

Auburn Increases Capacity

AUBURN, IND., Dec. 2—Auburn Automobile Co. has increased the capacity of its factory by the installation of a department for drying paint on bodies. The addition of the department gives the factory a thoroughly modern painting system. This comprises, in addition to the body-drying department, a complete enameling department and a moving line of chassis through steam-heated ovens.

Must Drive Own Cars

PHILADELPHIA, Dec. 4—In Pennsylvania holders of owners' licenses cannot drive any but their own cars, according to a ruling of the Attorney General.

New Carlisle Policy

STAMFORD, CONN., Dec. 2—Operating under a new policy, that of doing away with the distributor and dealer entirely, and selling its tires direct to buyers through branches, the Carlisle Tire Co. has opened its third branch, this one at Boston, under the management of F. G. O'Reilly.

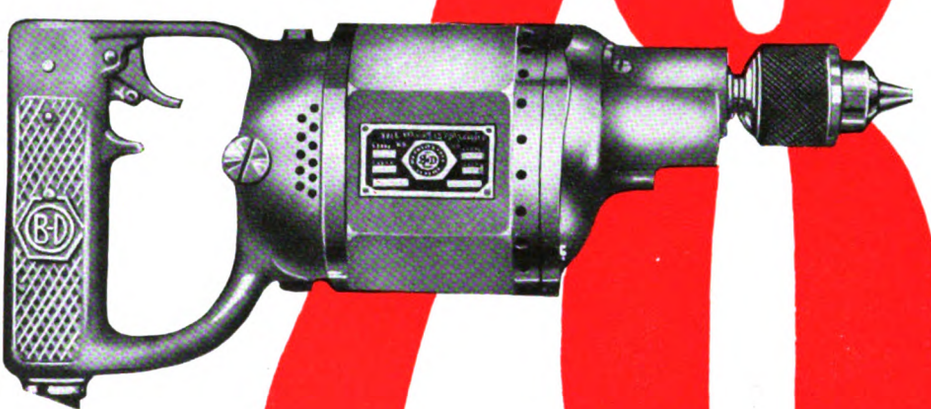
BLACK & DECKER



¼ inch PORTABLE ELECTRIC DRILL

"With the Pistol Grip and Trigger Switch"

Price reduced to

$28.00

was $39.00

Owing to the large demand for the Black & Decker Quarter-Inch Portable Electric Drill our production on this unit this year has been practically trebled. This has enabled us to reduce our manufacturing costs, and in accordance with our established policy we are passing the saving on to you.

This is the standard Black & Decker Quarter-Inch Drill, exactly the same as has previously been sold for $39 00 except that it has been improved by the addition of a geared-nut chuck instead of a hand operated chuck.

A new folder describing this unit in detail, INCLUDING SPECIFICATIONS, is yours for the asking

Guaranteed by

THE BLACK & DECKER MFG. CO.

Towson Heights, Baltimore, Md., U.S.A.

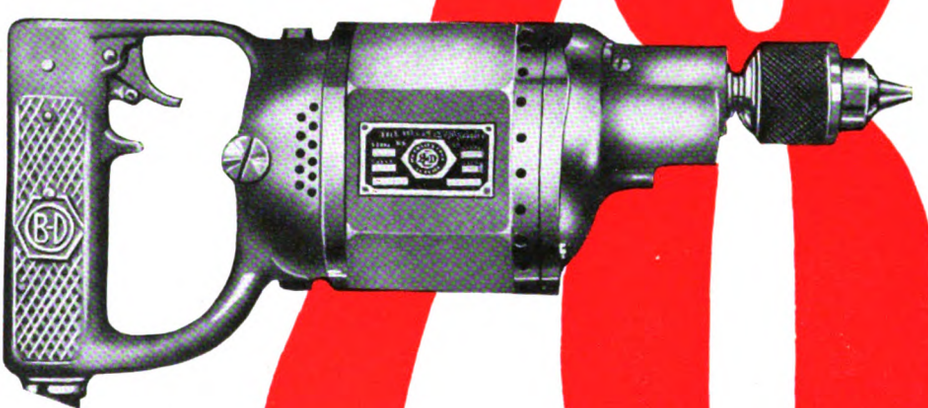
BLACK & DECKER



¼ inch PORTABLE ELECTRIC DRILL

"With the Pistol Grip and Trigger Switch"

Price reduced to

$28.00

was $39.00

Owing to the large demand for the Black & Decker Quarter-Inch Portable Electric Drill our production on this unit this year has been practically trebled. This has enabled us to reduce our manufacturing costs, and in accordance with our established policy we are passing the saving on to you.

This is the standard Black & Decker Quarter-Inch Drill, exactly the same as has previously been sold for $39 00 except that it has been improved by the addition of a geared-nut chuck instead of a hand operated chuck.

A new folder describing this unit in detail, INCLUDING SPECIFICATIONS, is yours for the asking

Gill

Interlocking-Joint

75c

One famous line of piston rings—*all* types—for *every* need.

Gill Interlocking-Joint rings dominate among patented piston rings because of their excellence. Servus Step-Cut rings and the Special Oil-Wiper are equally well made.

All three rings are individually cast of special grey iron that wears longer and holds full tension to the very end. All three rings are lathe turned for absolute precision and quick seating.

These rings serve motorists better. 36 factory branches serve dealers and jobbers better. All sizes and types are carried for immediate delivery. The right rings and the right policy for building business.

Building Better Business
—*the Boyce Way*

A "going" business must be a growing business. Today a policy of "sell 'em once, at any cost," spells commercial ruin. Successful dealers are building on a basis of regular customers, regularly satisfied—through value received and service.

That is why the Boyce Moto-Meter is such profitable business. It gives more value for less money than any other automobile accessory. It gives the car owner constant, reliable service in accurately indicating his motor temperature.

The Boyce Moto-Meter dealer sells more than an article—he sells a definite service that pays him big interest in consumer *confidence* and *good-will.*

We are broadening the scope of Boyce Service through the Boyce Moto-Meter Service Station Appointment, available to all responsible dealers. Write us for details of the new plan.

Car Name-plates Furnished Free with the Bumpers You Buy

Stewart Autoguards *to* Advertise the Car You Sell

Model 175

$22
Western Price $25

Double Rail Clamp

AN entirely new idea which is meeting with great favor. A car name-plate furnished absolutely free with every bumper you buy. The Stewart Autoguard center clamp is now made so that the Stewart name-plate can be taken out by loosening two screws and be replaced by the name-plate of the car you sell.

Car Name-plate Inserted

The car name appears in nickel against a brilliant red background. Let Stewart Autoguards advertise and protect the cars you sell.

Below is a list of cars for which name-plates can be secured without cost from Stewart-Warner Products Service Stations and Distributors, or from the factory direct.

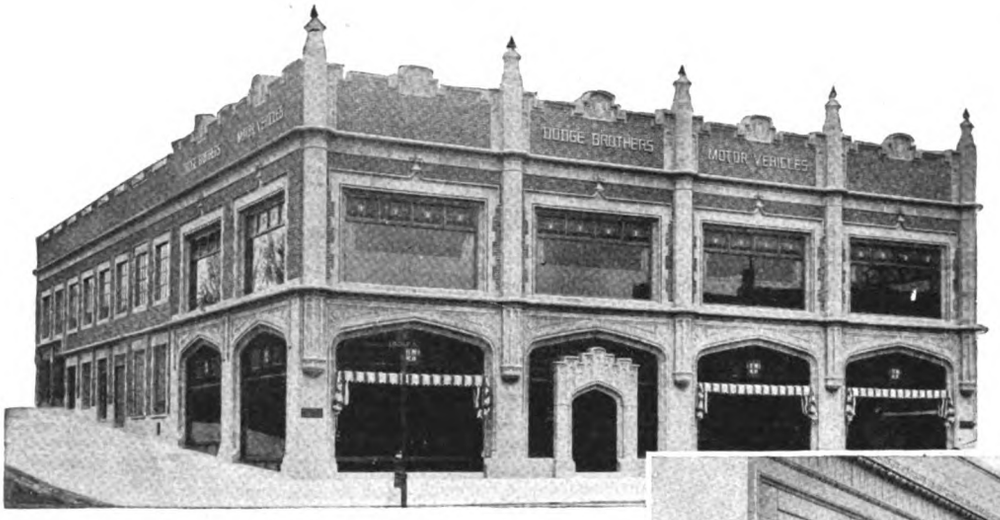
INDEX TO ADVERTISERS 108-109

A Neglected Part and a Dealer's Opportunity

The most conscientious car owner rarely, if ever, lubricates a metal to metal universal joint. Hard to get at, harder to lubricate, in a housing, this vital and busy joint is invariably neglected. And in time this neglect shows up in shaft, rear axle, transmission or clutch trouble.

GOODRICH FLEXIBLE DISC UNIVERSAL JOINTS completely eliminate joint and allied troubles by removing the fundamental cause—metal to metal surfaces. Ends of shafts permanently bolted to discs of fabric and rubber—that is the better way.



Friction is entirely disposed of. No lubrication whatever is needed. The joint is pliable and can flex in all directions. It has enormous strength and great durability. Will last the lifetime of the car. No housing required to protect it. Oil, water or sand cannot hurt it. Acts also as a shock absorber. Transmits a smoother, more even flow of power from engine to driving wheels.

You have a big opportunity, as a dealer, in GOODRICH FLEXIBLE DISC JOINTS. More and more they are becoming standard equipment on cars and trucks. More and more car owners are coming to know their advantages. Write us and let us show you your opportunity.

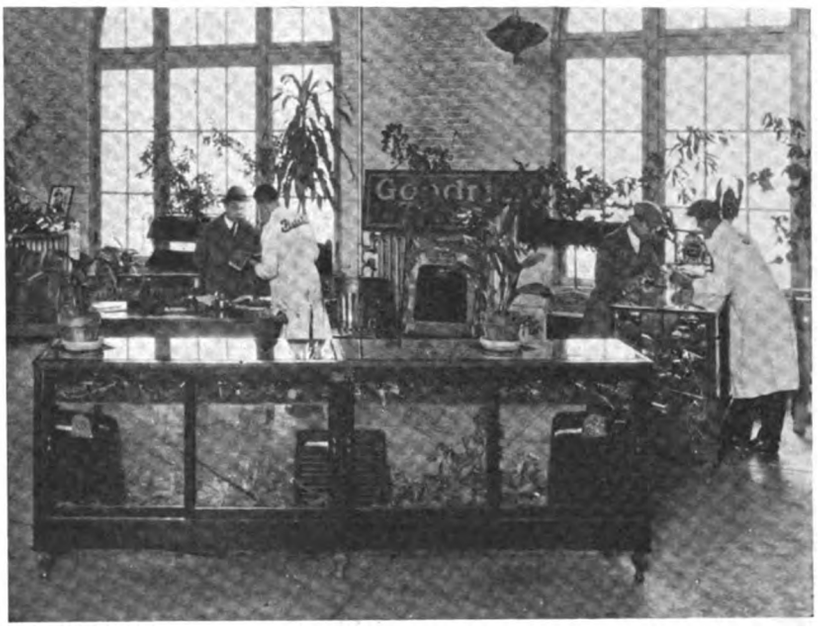
Making the Service Station an Equipment Salesman



No Excuse for Letting Accessory Profits Go Astray—A St. Louis Dealer Doesn't

By NEAL G. ADAIR

EVERYBODY makes profits off the man who owns an automobile except—we sometimes think—the man who sells it to him.

The roadside filling station or garage sells the motorist gas and oil. The tire station replaces his worn out shoes and tubes. The accessory store induces him to buy windshield wings and stoplights and many other items of additional or replacement equipment.

The automobile dealer sells the motorist his car. Perhaps the dealer over-allows on a used car taken in trade and has no actual profit on the transaction. Possibly he makes a clean sale or a wise trade and makes real money on the new car. In either case, if he is like a good many dealers who might be mentioned, he regards himself as "through" with that car when he has sold it, except that an aggressive dealer will follow it up for service and re-sale.

While maintenance customers wait for their cars in the Vesper-Buick service station in St. Louis service salesmen try to interest them in automotive equipment purchases. It looks as though one customer is going to buy a set of seat covers and the other a spotlight. Not every dealer has so large a service station as Vesper-Buick but every dealer has some sort of place where his customers wait and where accessories could be displayed and sold by repairshop attendants

But a good many other dealers who might also be mentioned are never "through" with a car until it goes to the junk heap. They follow it up not merely for service and re-sale but to provide its owner with all the supplies and equipment he requires as long as he runs the car. They cater not only to the market for cars but to the after market that surrounds every car in operation—and they make additional profits by the additional catering.

There are thousands of passenger car dealers, though perhaps not so many as a year or two ago, who don't want to be "bothered" with accessory and tire sales. They regard themselves as automobile merchandising specialists. It's a high sounding name and there wasn't much ground for criticising it when there weren't quite enough automobiles to go around. Now that competition has reached an acute stage, however, and is getting keener every month, the automobile dealer finds it increasingly difficult to make satisfactory profits out of the car business alone. He feels the need of additional sources of profit, and one that is ready and waiting for him is the after market created by the operation of the very cars he sells.

The automobile dealer has a natural contact with the people who buy his cars. He is the logical source of supply for the many items of replacement and additional equipment, some of which every car must have while others, because they improve its operation, can be sold by progressive merchandising effort. But many dealers, because of topheavy dignity or indifference, have let the supply and equipment business drift out of their hands. Some of it has gone to the garageman, where some of it belongs because he, too, has a natural contact with the motorist and the automotive knowledge to serve him adequately. But some of it has gone to the department store, the hardware store, the druggist and the grocer, none of whom can serve the car owner as economically or as well as the automotive man.

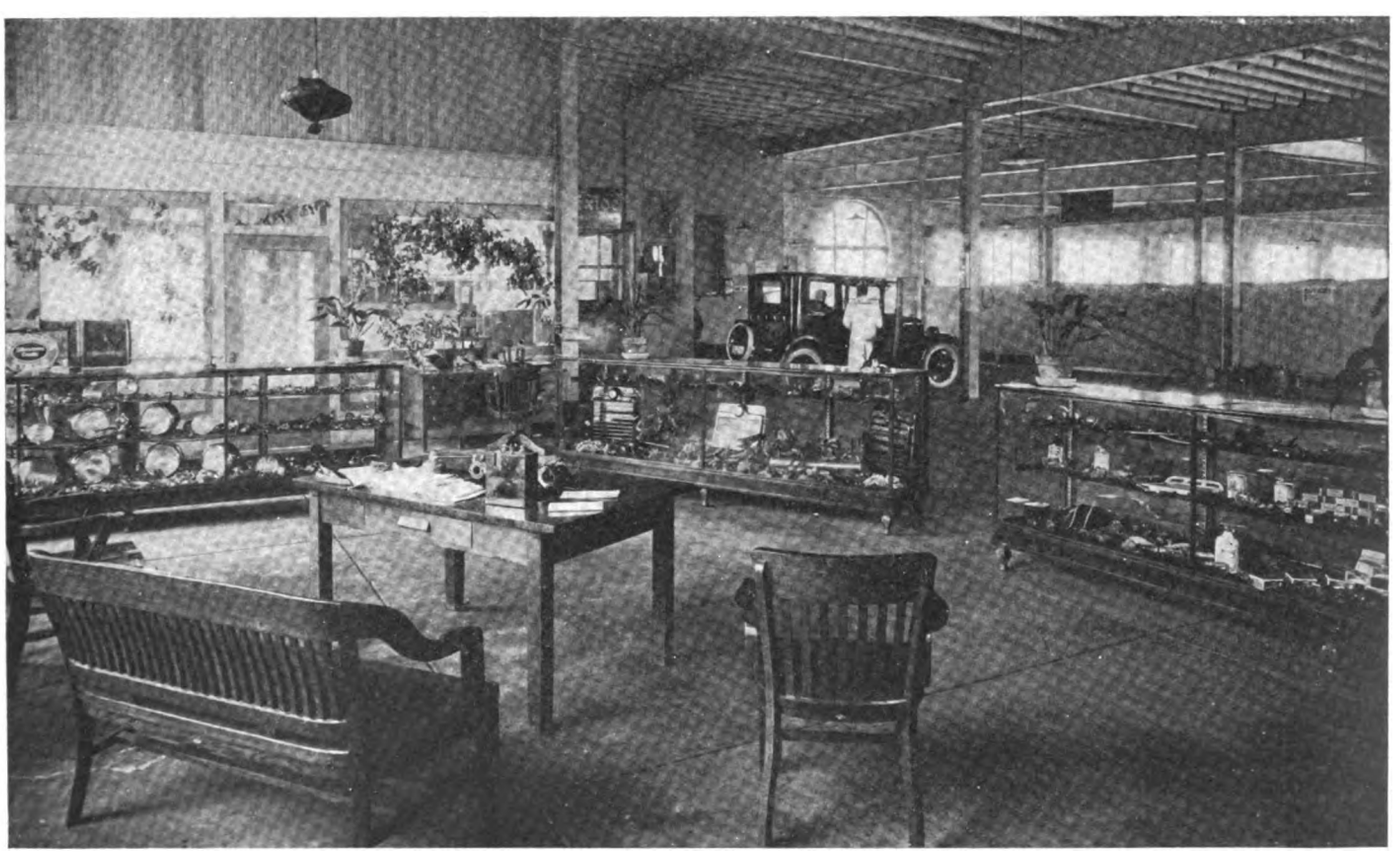
Only a few days ago the editorial representative of a business paper in the drug trade called at the office of Motor World asking for suggestions for the druggist to make winter profits by serving the needs and wants of the motorist. Yet many dealers and garagemen, with supply and equipment prospects coming to their doors every day, overlook this fertile field of profit.

If any passenger car dealer thinks there is no precedent for substantially profitable attention to equipment merchandising let him look about him, even about his own town, and he will find examples of dealer activity that make his presumption ridiculous. It would be possible

Digitized by Google

here to mention scores of automobile dealers, large and small, who have highly profitable equipment departments, but a few examples will prove the point.

Take New York, largest city in the world. Stratton-Bliss, dealer in Dodge Brothers cars and trucks, sells accessories at every point of contact with the customer. The new car salesman is the first actor in this profitable drama. He usually sells $50 or more in additional equipment with the car. Second in order of appearance is the man in the delivery department who turns the car over to the buyer; he sells some items that the car salesman "overlooked," having received a copy of the salesman's accessory order as a guide. The courtesy man in the service station, the parts clerk, service station cashiers and other employees who come in contact with customers are also accessory salesmen. They get a commission on all sales and the service station and office managers, who oversee and promote this selling work, also share in the profits. No wonder Stratton-Bliss equipment sales run into many thousands of dollars a year.



Take Higginsville, Mo., 3000 population. A. E. Fieth, Nash, Dort and International truck dealer, has a repair-shop and sells accessories and tires. His office is his accessory store. Every customer gets into that room sooner or later, and the most noticeable thing in it is a showcase displaying accessory items. If a customer is paying a bill or making an inquiry, Fieth or his clerk don't hurry with their end of the transaction. They give the customer time to get a good look at the contents of the showcase. If he shows interest in anything displayed, Fieth explains its use and often makes a sale. There is no persistent effort to sell accessories to every customer, but no visitor goes away without having seen them, and in many cases sales become just a matter of accommodating a latent desire to buy.

Go back to a bigger town, Kansas City. Hudson-Brace has accessories in the service office and waiting room. A card is kept on every service patron's car, showing what items of high-class utility equipment it ought to have. At opportune times, while service work is being ordered, waited for or paid for, the service clerk mentions some of these equipment articles especially adapted to the car in question, and many sales are made on the basis of additional service to the Hudson or Essex car owner.

Now, go to another Missouri city, St. Louis. Vesper-Buick Auto Co. is one of the country's big Buick distributors. Its annual turnover of Buick cars at wholesale and retail is a huge business in itself. Vesper-Buick sells cars at retail on the foundation of satisfactory operation of its cars already in the hands of owners. A well-equipped service station, called by Vesper-Buick its maintenance division, is largely responsible for this foundation of sales. One might think Vesper-Buick had enough to do selling and servicing Buick cars without getting into the automotive equipment business. But Vesper-Buick saw the additional profit to be made in accessories simultaneous with additional service to its customers and the opening of an accessory store in the service station followed.

The store is nothing more than a grouping of service customers' rest chairs and accessory showcases. In planning this arrangement John O. Lowell, service manager,

Where Accessories Are Shown and Sold in St. Louis Service Station

This is a corner of the maintenance division of Vesper-Buick, where automotive equipment merchandise is attractively displayed before the eyes of waiting service patrons. A customer occupying one of the chairs can hardly look in any direction without seeing accessories that might improve the appearance, comfort or utility of his car. After the customer has been looking the accessories over for awhile a service salesman will ask him to buy

Digitized by Google

had in mind the fact that many cars brought in for minor adjustments would be driven back into the shop, leaving the owner to shift for himself until the car was ready.

Three or four comfortable chairs and a bench or two, placed so they would face the showcases, were provided for the comfort of these customers, with the result that the owner who was waiting for a small job to be finished on his car was asked to buy through the suggestions offered by the showcase displays.

These accessory showcases are redecorated frequently. The accessory department as a whole is kept in line with the seasons, holidays and current events.

This not only attracts considerable attention, but creates the impression in the owner's mind that the organization is alert to what is going on outside of the automobile world, with the resultant thought that the owner is dealing with a "live one."

Service Salesmen Sell Equipment

The service salesmen, who are also accessory salesmen, are impressed with the importance of giving each caller more courteous and intelligent service than was ever given before, endeavoring to develop the friendly and personal side of service to the trade.

Without interfering with the service work, these salesmen are instructed to push the sale of seasonable accessories vigorously at all times. One of these boys set for himself a quota of one Winterfront automatic radiator shutter a day from Oct. 15 until Christmas. So far he has kept up his record in good shape, averaging five or six each week, and frequently running higher.

With the coming of the fall and winter months, such accessories as chains, windshield wipers, hood covers, Moto-Meters, etc., are given prominent display space, and their sale is pushed. A steel drum of alcohol is placed on display early in the winter and is kept constantly in sight during the cold weather. Customers are reminded that broken cylinder blocks, frozen radiators and water pumps and other damage from frozen water can be avoided by the use of an anti-freeze solution.

Letters Push Accessory Sales

But Vesper-Buick does not rest with merely selling automotive equipment *in* the service station. The company employs advertising and the mails to *bring in* accessory customers.

Below is a letter that introduced the new department to Buick owners:

There has been added to our Maintenance Division an Equipment, or what is more commonly known as an Accessory Department.

In same we will carry all sorts of accessories for Buick cars, such as bumpers, Moto-Meters, parking and stoplights, mirrors, tires, tubes, etc.

On your next visit to the Maintenance Division, stop over a few minutes and look over our display, and some time when you find need for any article of equipment for your car, we would appreciate the opportunity of supplying you. If some article other than usually carried in stock should be desired, we will get it for you.

The next letter confined itself to one item, sunshades:

We have on hand some very serviceable sunshades, which we believe will interest you. The construction of this shade is the very best, and you no doubt appreciate the advantage of having a sunshade on your car. They are restful to the eyes while driving in the bright sunshine and on the country roads at night, when glaring headlights make driving both inconvenient and hazardous. We are installing same for $16 in either amber or green glass.

We ask on your next visit to our Service Station we be allowed to show you both kinds.

Another letter talked only about spotlights:

When driving along country roads at night, you have, no doubt, been annoyed by the "other fellow's" bright headlights blinding you and also causing you apprehension as to whether you are going to drive off the road.

We have on hand an assortment of spotlights, which we believe will prove satisfactory to you in eliminating this danger by showing you the edge of the road.

In order to get you better acquainted with our Equipment Department we are, for the next few days, selling these lights at a substantial saving to you and are making no installation charge.

We ask that on your next visit to our Service Station we be allowed to show you the lights we have on hand.

Still another letter told the story of the wind deflector:

We now have on hand some very well constructed wind deflectors, which we believe would both add to the appearance of your car as well as driving comfort, that sell for $9. We are wondering whether you would be interested in talking about the installation of a pair on your next visit to the Maintenance Division.

A fifth letter introduced a member of the "spare" family that many motorists never think of until troubles compel them—the fan belt:

You carry on your Buick car a spare tire, in order to eliminate the necessity of repairing the tire on the road and to eliminate chances of ruining other tires.

We are wondering whether the thought occurred to you as to the advisability of carrying a spare fan belt. The same condition holds true on the fan belt as the spare tire. Without a fan belt you always take a chance on injuring your motor, so when you need one you need it very badly and they are not always available.

We sell Buick fan belts, the correct kind for your model, for 66 cents.

On your next visit to our Service Station let us supply you with this essential spare.

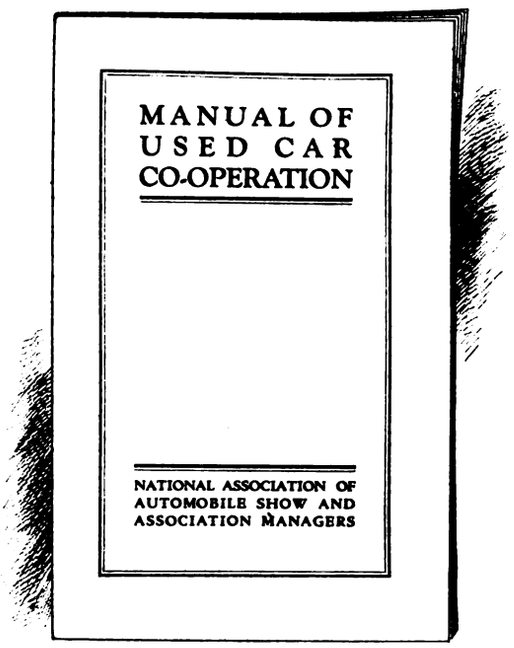
Why Overlook Logical Profits?

There have been other accessory sales letters going out from Vesper-Buick; there will be still others. On a par with car sales and car service the automotive equipment department will stand on its own feet and earn its own way in this automotive establishment.

Isn't there a suggestion in this St. Louis story, in many other stories that could be written from many other cities, about the profit possibilities in automotive equipment merchandising? *The need of the day is for well-rounded-out automotive sales and service facilities in every dealer establishment. And the dealer who rounds out his facilities also rounds out his profits.*

This is the way Vesper-Buick looks at it:

"While Buick automobiles, when ready for delivery, are complete so far as the necessary accessories are concerned, there are many owners of both new and old cars who like to dress up their cars, or put on additional accessories. The installation of our accessory department has enabled us to supply our customers with everything they want along this line, and the customer is able to have his car properly serviced and maintained, and purchase his supplies and accessories all at one source."



Cultivate the After Market

The hardware merchant doesn't sell you a kitchen range and then expect you to go somewhere else for a coal scuttle. He makes an additional profit on the additional sale. The automobile dealer sells the most expensive single unit, except a house, that the average family ever buys. It is a piece of merchandise on which money will be spent for fittings as well as repairs throughout its life. The automobile dealer who caters to the after market as well as the original market for his cars is laying the foundation for a substantial future.

And the fine part of it all is, it's so easy.

Digitized by Google

BOSTON automobile dealers state that they have saved themselves $400,000 since February 1st by co-operating in the valuing of used cars. In many other cities similar co-operation and similar saving is going on. The movement was given impetus by the first National Used Car Conference in history, held in Chicago in September. This conference analyzed the essentials of virtually all the used car plans in operation. On the basis of the analysis a committee of the National Association of Automobile Show and Association Managers, which held the conference, has compiled a Manual of Used Car Co-operation. The cover of this 16-page book is shown at the right. The book and the plan of distributing it are described in the story on this page and forms from the book are illustrated on the next two pages.

Manual of Used Car Co-operation Ready

Book Compiled by National Association Is Being Distributed

THE Manual of Used Car operation, compiled by the National Association of Automobile Show and Association Managers, has come from the presses and is being distributed to trade association secretaries and dealers who have applied for copies. Several hundred copies already are in the mails and others are being sent out as rapidly as orders for them are received.

Distribution is being handled from the association offices at 239 West 39th Street, New York. The book is sent out to any applicant on receipt of $2, a price fixed to cover costs of compilation and distribution.

The book contains a plan, with forms and instructions for using them, which can be used by any dealer association or group of dealers desiring to co-operate to eliminate over-allowances on used cars.

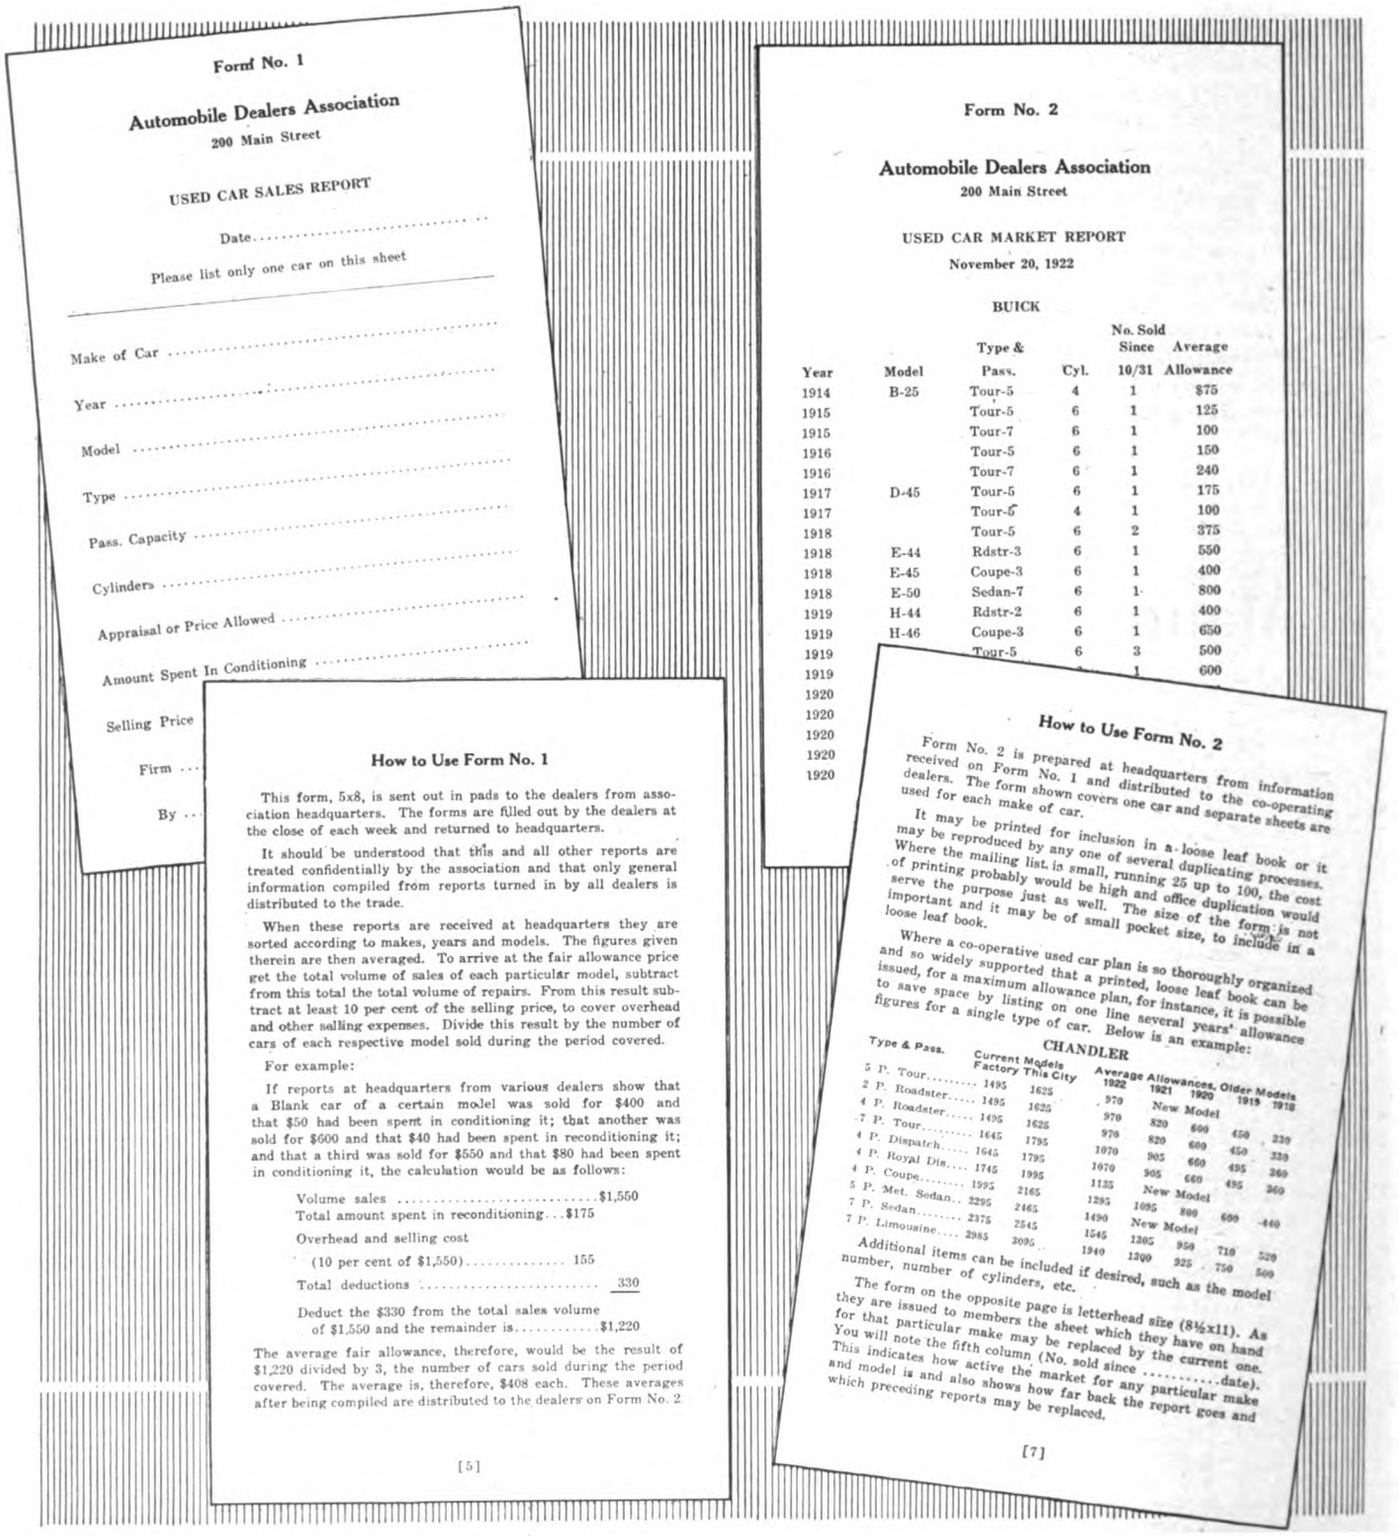
Basic forms in the book are a Used Car Market Report and a Report of Used Cars on Hand, the former serving as a guide to correct allowance prices and the latter giving information on slow and fast moving cars in the community. Supplementary forms are provided for the use of the used car committee or secretary in obtaining from individual dealers and compiling the information contained in the first two mentioned forms. The book also presents the machinery of organization of a maximum allowance plan.

The Manual is the concrete result of the National Used Car Conference, held in Chicago in September. At that conference it was brought out that Boston, Saginaw and a few other cities were operating maximum allowance plans and that Chicago, Cleveland, Detroit, Kansas City and some others had used car market information services which guided dealers in making allowances. Since the meeting and as a result of the publicity given the co-operative movement, a large number of additional cities have adopted either maximum allowance or market information services, the maximum allowance co-operators including Philadelphia, Baltimore, Syracuse, Newark, N. J., and several other large cities.

The trade association secretaries at the conference felt that a service could be done the industry by publishing a plan for used car co-operation which would take the best out of the slightly different plans in use in various cities and make the information available for dealers and dealer association secretaries throughout the country. The committee which compiled the Manual consisted of Herbert Buckman, manager of the Cleveland Automobile Manufacturers and Dealers Association; L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, and Neal G. Adair, editor of Motor World and executive secretary of the National Association of Automobile Show and Association Managers. This committee, after meetings in New York and Chicago, compiled the Manual which is now being distributed.

In the introduction of the forms in the Manual, the committee says:

"It is possible for dealers to make profits in the handling of used cars. The first step is applied knowledge of used car market values.



"This manual shows how to take this first step. It is not a modern panacea for the problem that comprises within itself 75 per cent of all the misunderstandings within the automobile industry to-day. It presents, however a method of determining used car values as a basis for businesslike used car merchandising.

"The plan herein presented is not going to tear down and reconstruct in two weeks what the industry has been 20 years in building. However, the used car has taken such an important place in our volume of business, its true value as a commodity must be established.

"Some dealers, individually and in co-operation with others of their own community, have succeeded in reducing losses on cars taken in trade. The first step.

How to Use Form No. 1

This form, 5x8, is sent out in pads to the dealers from association headquarters. The forms are filled out by the dealers at the close of each week and returned to headquarters.

It should be understood that this and all other reports are treated confidentially by the association and that only general information compiled from reports turned in by all dealers is distributed to the trade.

When these reports are received at headquarters they are sorted according to makes, years and models. The figures given therein are then averaged. To arrive at the fair allowance price get the total volume of sales of each particular model, subtract from this total the total volume of repairs. From this result subtract at least 10 per cent of the selling price, to cover overhead and other selling expenses. Divide this result by the number of cars of each respective model sold during the period covered.

For example:

If reports at headquarters from various dealers show that a Blank car of a certain model was sold for $400 and that $50 had been spent in conditioning it; that another was sold for $600 and that $40 had been spent in reconditioning it; and that a third was sold for $550 and that $80 had been spent in conditioning it, the calculation would be as follows:

Volume sales	$1,550
Total amount spent in reconditioning	$175
Overhead and selling cost (10 per cent of $1,550)	155
Total deductions	330
Deduct the $330 from the total sales volume of $1,550 and the remainder is	$1,220

The average fair allowance, therefore, would be the result of $1,220 divided by 3, the number of cars sold during the period covered. The average is, therefore, $408 each. These averages after being compiled are distributed to the dealers on Form No. 2

How to Use Form No. 2

Form No. 2 is prepared at headquarters from information received on Form No. 1 and distributed to the co-operating dealers. The form shown covers one car and separate sheets are used for each make of car.

It may be printed for inclusion in a loose leaf book or it may be reproduced by any one of several duplicating processes. Where the mailing list is small, running 25 up to 100, the cost of printing probably would be high and office duplication would serve the purpose just as well. The size of the form is not important and it may be of small pocket size, to include in a loose leaf book.

Where a co-operative used car plan is so thoroughly organized and so widely supported that a printed, loose leaf book can be issued, for a maximum allowance plan, for instance, it is possible to save space by listing on one line several years' allowance figures for a single type of car. Below is an example:

CHANDLER

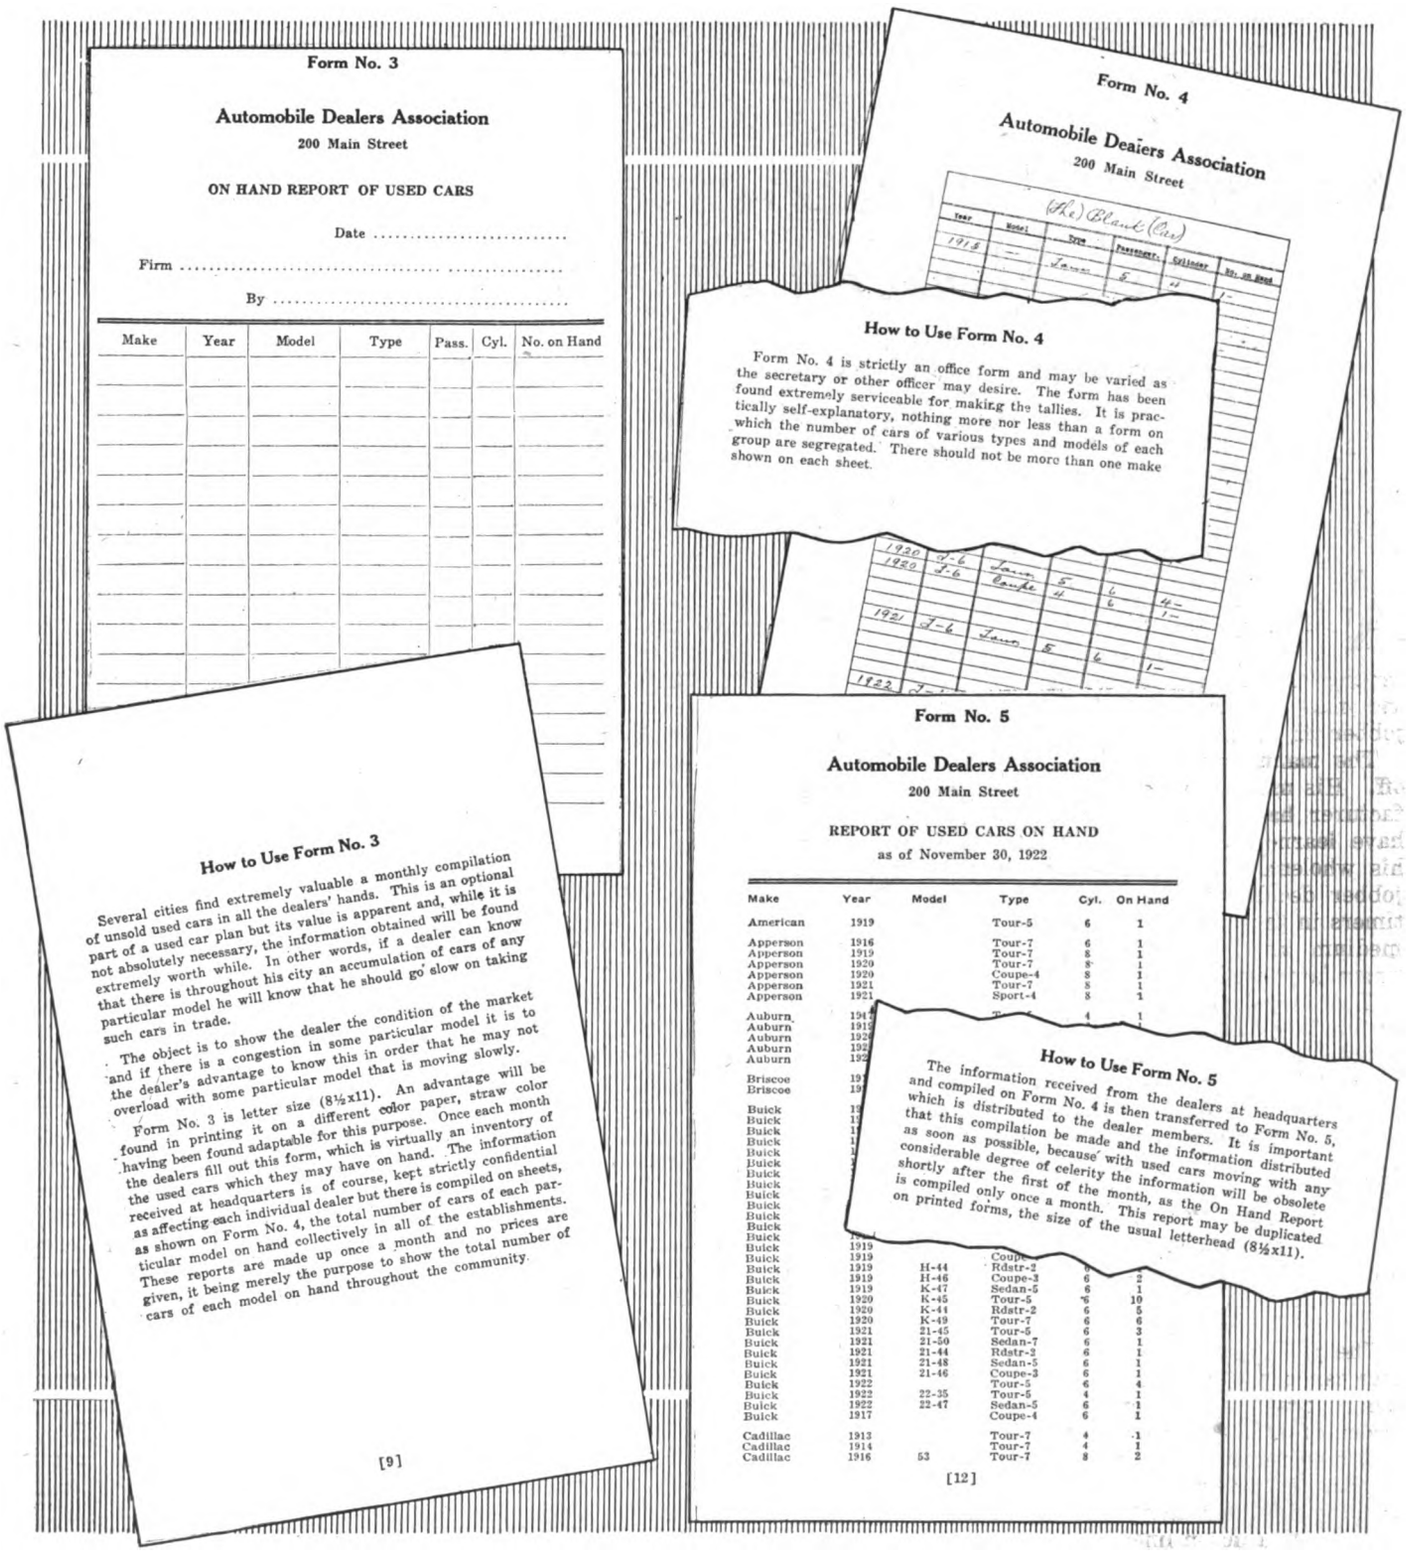
Type & Pass.	Current Models Factory	This City	Average Allowances, Older Models 1922	1921	1920	1919	1918
5 P. Tour	1495	1625	970	New Model			
2 P. Roadster	1495	1625	970	820	600	450	330
4 P. Roadster	1495	1625	970	820	600	450	330
7 P. Tour	1645	1795	1070	905	660	495	360
4 P. Dispatch	1645	1795	1070	905	660	495	360
4 P. Royal Dis.	1745	1995	1135	New Model			
4 P. Coupe	1995	2165	1295	1095	800	600	440
5 P. Met. Sedan	2295	2465	1490	New Model			
7 P. Sedan	2375	2545	1545	1305	950	710	520
7 P. Limousine	2985	3095	1940	1300	925	750	500

Additional items can be included if desired, such as the model number, number of cylinders, etc.

The form on the opposite page is letterhead size (8½x11). As they are issued to members the sheet which they have on hand for that particular make may be replaced by the current one. You will note the fifth column (No. sold since .....date). This indicates how active the market for any particular make and model is and also shows how far back the report goes and which preceding reports may be replaced.

[7]

toward this is to find out what the used car is worth. In other words, if the dealer can know what the used car can be sold for, he can make a more nearly accurate appraisal in taking it in trade. The foundation of the plan, therefore, must be to eliminate guesswork appraisals and give the dealer and his used car organization accurate information on what used cars offered are worth.



"The plan set forth in this manual shows how to compile such accurate information of marketable values and how it can profitably be used by the dealers of a community.

"What a used car is worth is what it can be sold for.

"But—

ON HAND REPORT OF USED CARS

Date .....

Firm .....

By .....

Make	Year	Model	Type	Pass.	Cyl.	No. on Hand

How to Use Form No. 3

Several cities find extremely valuable a monthly compilation of unsold used cars in all the dealers' hands. This is an optional part of a used car plan but its value is apparent and, while it is not absolutely necessary, the information obtained will be found extremely worth while. In other words, if a dealer can know that there is throughout his city an accumulation of cars of any particular model he will know that he should go slow on taking such cars in trade.

The object is to show the dealer the condition of the market and if there is a congestion in some particular model it is to the dealer's advantage to know this in order that he may not overload with some particular model that is moving slowly.

Form No. 3 is letter size (8½x11). An advantage will be found in printing it on a different color paper, straw color having been found adaptable for this purpose. Once each month the dealers fill out this form, which is virtually an inventory of the used cars which they may have on hand. The information received at headquarters is of course, kept strictly confidential as affecting each individual dealer but there is compiled on sheets, as shown on Form No. 4, the total number of cars of each particular model on hand collectively in all of the establishments. These reports are made up once a month and no prices are given, it being merely the purpose to show the total number of cars of each model on hand throughout the community.

Form No. 4

Automobile Dealers Association
200 Main Street

(The) Blank (Car)

Year	Model	Type	Passengers	Cylinders	No. on hand
1915	—	Tour.	5	4	1
1920	3-6	Tour.	5	4	1
1920	3-6	Coupe	4	6	1
1921	3-6	Tour.	5	6	1
1922	3-				

How to Use Form No. 4

Form No. 4 is strictly an office form and may be varied as the secretary or other officer may desire. The form has been found extremely serviceable for making the tallies. It is practically self-explanatory, nothing more nor less than a form on which the number of cars of various types and models of each group are segregated. There should not be more than one make shown on each sheet.

How to Use Form No. 5

The information received from the dealers at headquarters and compiled on Form No. 4 is then transferred to Form No. 5, which is distributed to the dealer members. It is important that this compilation be made and the information distributed as soon as possible, because with used cars moving with any considerable degree of celerity the information will be obsolete shortly after the first of the month, as the On Hand Report is compiled only once a month. This report may be duplicated on printed forms, the size of the usual letterhead (8½x11).

"What it should be bought or taken in for is the amount it can be sold for, less the actual cost of reconditioning and a fair margin of profit for handling.

"A dealer in one or perhaps two or three makes of cars naturally will know the market value of his car or cars, and perhaps of a few others, but it is difficult for him to know the prices which he can reasonably expect to obtain for the great number of cars which will be offered to him in trade.

"The forms presented in the Manual have been found simple and effective in gathering, compiling and distributing the information on which the dealer should base his allowance to avoid a loss as the foundation of the used car transaction."

Digitized by Google

THESE are changing times in the automotive-equipment industry. Manufacturers are learning that representation by jobbers does not necessarily mean distribution. Jobbers are discovering that having contracts with large numbers of manufacturers, even of widely known products, does not assure them business. The lesson is sinking in that scattered sales effort will not get results, that concentration is necessary. Manufacturers are concentrating their distribution in fewer jobbers. Jobbers are cutting down their lines and at the same time reducing and more intensively cultivating their territories. This story tells about this very modern and very marked movement in the automotive-equipment field. No doubt dealers and garagemen, as ultimate distributors of automotive equipment, will find interest in the story but its suggestions are for manufacturers and jobbers.

Smaller Territories and Fewer Lines the Modern Jobbing Trend

Equipment Manufacturers, Too, Are Discovering New Definition of "Distribution"

By NEAL G. ADAIR

A JOBBER received a letter from a manufacturer of timers for Fords, asking why he was not selling more of the manufacturer's products. The jobber replied that he was not trying to sell them. Thereupon the manufacturer wrote an indignant letter cutting the jobber off his list.

The manufacturer was justified in cutting the jobber off. His mistake was in getting indignant. If the manufacturer had taken the trouble to investigate he would have learned that he should have taken the jobber off his wholesale list six months earlier. At that time the jobber decided to discontinue carrying a dozen lines of timers in favor of selling three lines, one high priced, one medium and one low. The indignant manufacturer's timer happened not to be one of the three.

This incident illustrates a trend in merchandising which is gaining strength every day in the automotive-equipment field. Intensive competition is forcing jobbers to restrict their lines. Scattered gunfire from such a skirmishing line as a catalog containing seven or eight thousand items won't win to-day's battle on the dealer and garage front. The jobber must have a battery of Big Berthas and he is finding it in lines of leaders—a dozen or two dozen fast-selling items with which his salesmen can batter down competition and then mop up with the secondary ammunition of general merchandise.

What the Jobber Needs

The jobber's Big Berthas must be goods that his salesman can make a noise about, which imposes two requirements, first, that the goods must be highly salable, and, second, that the salesman must know the goods. The second requirement is largely responsible for the restriction of lines. A salesman cannot make much of an impression walking into a dealer's establishment and trying to sell him one of a dozen lines of timers or horns or even spark plugs. He cannot talk convincingly about any of them. He cannot tell the dealer why any one is a good piece of merchandise or, what is more important, how the dealer can go at the job of selling it. If he has one or, at the most, two or three lines of each class of merchandise he can learn the construction features and selling points of all of them fairly well. He can open his conversation with the dealer by talking about items which he knows well, obtain an order or group of orders from his line of leaders and then, when he has maneuvered the dealer into a buying mood, work up a reasonable volume of pick-up orders from the pages of his catalog making up his second line of attack.

Jobbers Specializing

Not all jobbers by any means have reached or even approached this stage of semi-specialization but the number who are working along these lines is gaining every day. This trend among jobbers is meeting co-operation in some manufacturing circles, resistance in others.

The jobber who is cutting his timer line, for instance, down to three would like to have fewer competing jobbers handling the same timers. He feels that if he is going to concentrate his timer sales activities on three lines the manufacturers of those lines should co-operate by broadening his market, and they can do this only by cutting down the competition against his work as a distributor. He would like to see, perhaps, two or three of the twenty-odd jobbers in his territory handling these timers, another group of jobbers, another group of timers, and so on, eliminating a condition under which perhaps fifteen to twenty jobber salesmen in a single week approach the same group of dealers with the same list of timers. Some manufacturers are falling in with this line of thought. In fact, some are urging it upon jobbers, with the result that in quite a number of lines manufacturers are gradually but materially cutting down their jobber representation in given territories.

On the face of it the two movements—jobbers restricting their lines and manufacturers cutting down multiplicity of jobber representation—should assist in the much-needed process of reducing distribution costs.

Another instance, rather, a pair of them, will serve to illustrate the workings of the present day trend in the equipment field.

A jobber who had been carrying several lines of brake lining threw out all but one six months ago. In the half-year period he has sold twice as much brake lining as in

Digitized by Google

any similar time in the history of his business. It didn't just happen, of course. He pushed the sale of the one brake lining. His salesmen were able to study up on the one line, talk about it as the best line and turn convincing sales arguments into sales.

The other instance is of a manufacturer, one of the most aggressive in the equipment field, whose factory makes a replacement unit. In a wide territory he cut his jobber representation from five to two. Over a year's period accurate check was kept on all the company's products going into that field, and the two jobbers gave him more distribution than the five ever had. When it is noted that these two jobbers had cut their lines of this class of product from six or seven to two or three the full import of what had taken place is seen. The manufacturer did not eliminate competition on his line in the territory. Rather, he intensified it by making it more worth the while of his wholesale representatives to push his goods. Nor did the jobbers give the manufacturer a monopoly of their services. They simply fitted themselves for better merchandising of the class of merchandise in question by restricting the number of lines.

Another manufacturer told a group of jobbers recently that he hoped within two or three years to reduce the number of jobbers on his books from 500 or thereabouts to a little more than 200. He gave it as his opinion that a manufacturer with a salable line of merchandise can cut his jobber list in half, using discretion, without losing sales volume.

Representation or Distribution?

Apparently, judging from the hundreds of names on the wholesale lists of some manufacturers, there are still sales managers who think that representation spells distribution. More and more of them, however, are learning their mistake. They are discovering that shipping a jobber a bill of goods doesn't sell them, and that a jobber who places only small and occasional orders is not a good customer, for two reasons. The first is that he is not giving the manufacturer distribution of his product in the territory and the second and more important reason is that he is not getting a frequent turnover of merchandise and so is not a good credit risk for the manufacturer.

New manufacturers coming into the equipment field cannot alway get representation by the strongest jobbers, nor can they get individual jobbers to push their lines as vigorously as they will push tried and proven merchandise. They are forced to an extent to seek distribution through numerical strength of representation. But it is significant that some of the older and apparently more successful manufacturers are supporting and in some cases leading the movement among the jobbers to intensify selling by lopping off some of the outer fringes of competition. Just as the jobber can work more efficiently selling a restricted line of merchandise, so can the manufacturer get better results, particularly through his field organization, working with smaller groups of jobbers.

Young Industry Is Steadying

The automotive equipment business necessarily is younger than the automobile industry from which it gets its living, and it still has many straggling features. The trend toward centralization of selling effort may be regarded as one of the reforms developing with age. This movement, aside from lightening burdens and tending to assure profits of manufacturers and wholesalers, may gradually influence lower retail prices through the process of reduced distributing costs. It is not difficult to understand why an article which cost the manufacturer $1.85 must take $10 out of the consumer's pocket after one has seen twenty jobber salesmen, in a day, calling on a garageman on the outskirts of one of our Eastern cities and, added to that spectacle, has visualized the vast army of manufacturers' salesmen and missionary men working continually on the many thousands of wholesalers and retailers in the equipment field.

But the young and struggling industry is getting steadier on its feet. Through its several associations and its group meetings of manufacturers and jobbers it is learning more about the laws of supply and demand. The manufacturers' inclination toward limitation of jobbers, together with the jobbers' leaning toward curtailment of lines, seems to be a move in the direction of operation along more soundly economic lines. Add to this the additional tendency of jobbers to restrict territory and so cultivate it more intelligently and we find much that the manufacturer, veteran or novice, needs to keep closely under his eye in the automotive equipment field.

Before Shows Number

THIS always popular annual number of Motor World will be issued Dec. 27—the last number in the year.

It will present to the trade THE SHOW SEASON AS A SELLING OPPORTUNITY.

There will be three principal features, all handsomely illustrated.

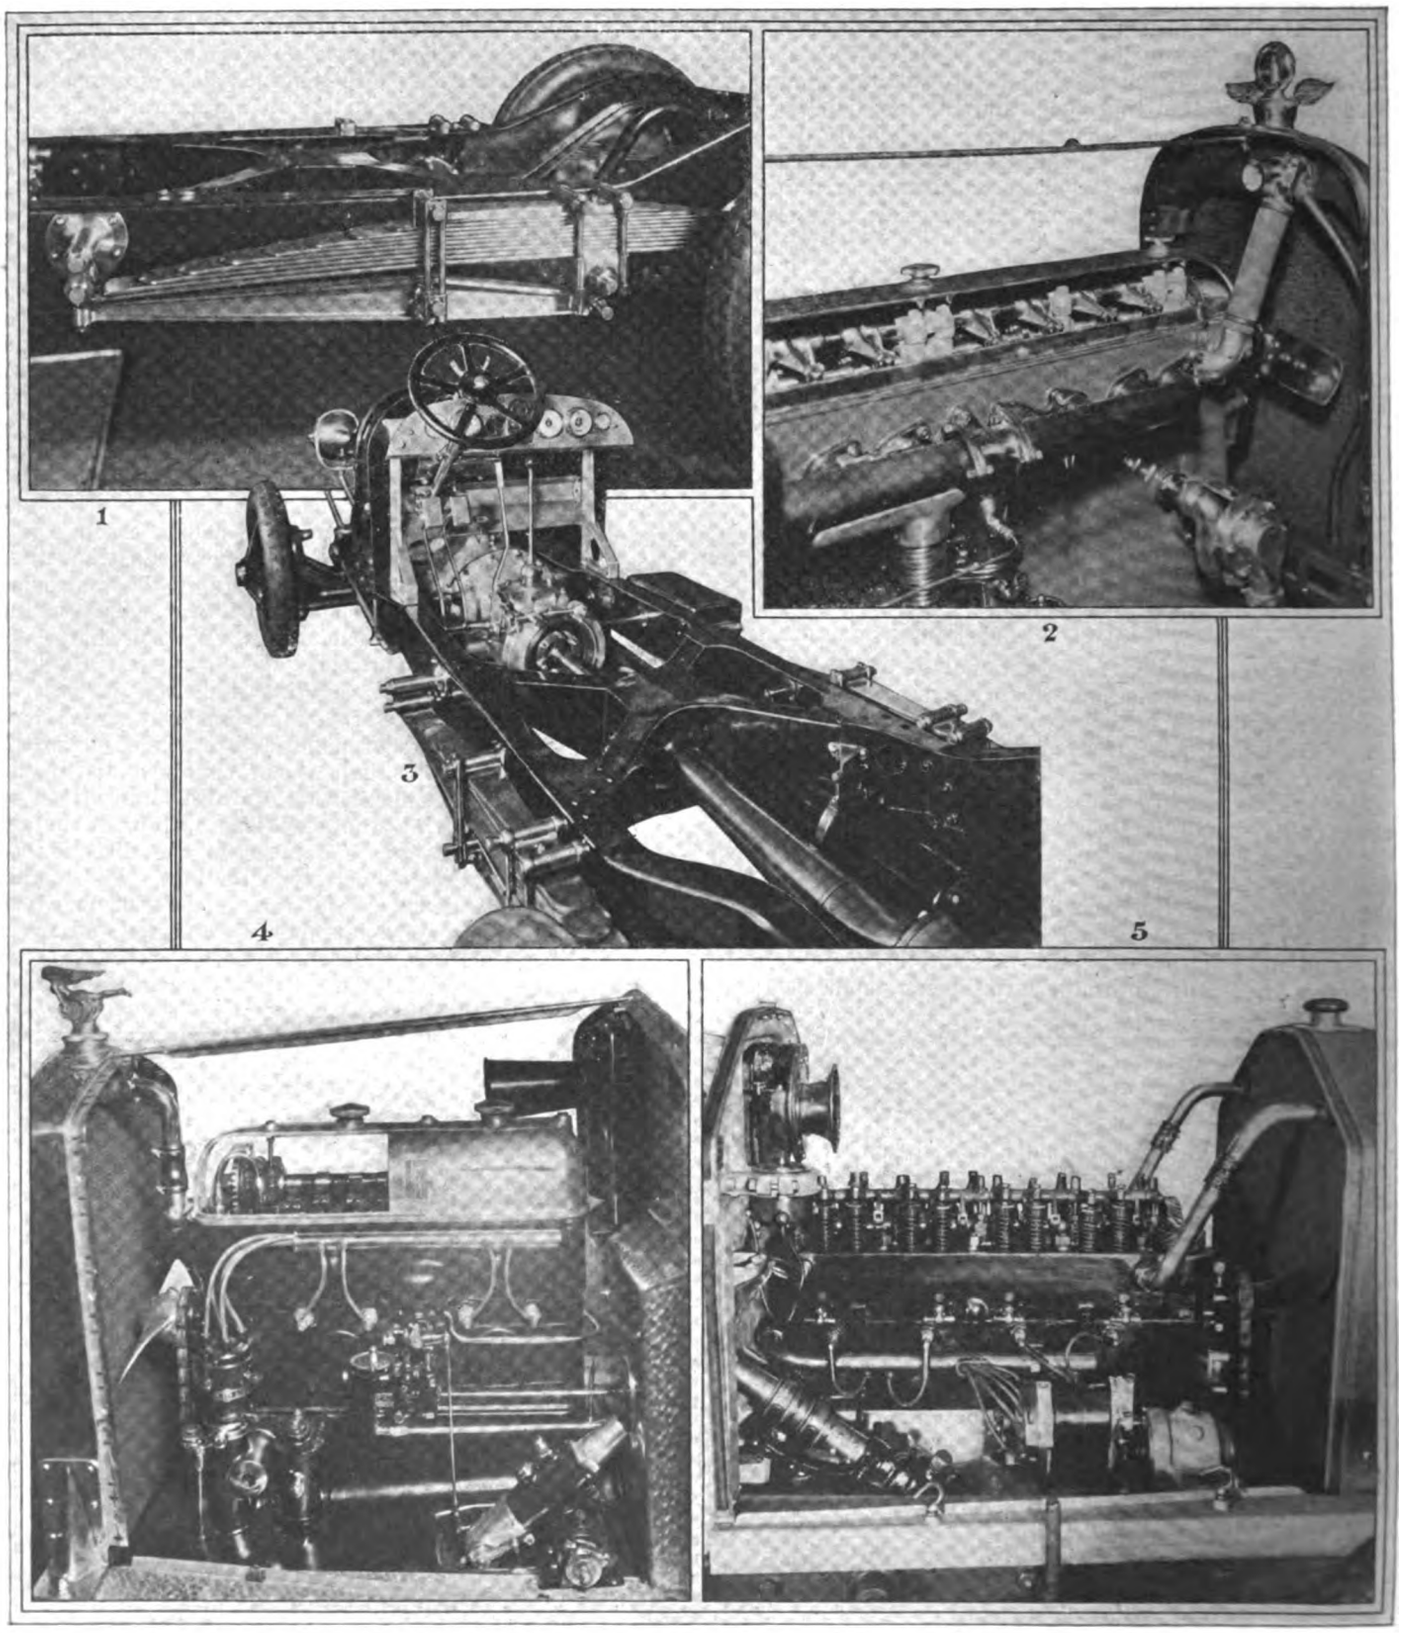
1—**The 1923 Shows**—A look ahead at the New York and Chicago shows and the show season all around the country.

2—**Making the Shows a Selling Force**—Telling how the show committee, the dealer and the salesman can make the most of the showtime opportunity. In this section there will be some ideas for show season selling that dealers can take right out of the pages of Motor World AND USE.

3—**Selling the 1923 Car**—A merchandising study of the automobile of to-day. This story will get right down to tacks with the selling points of the modern car and show what's back of those selling points. It will be interesting, practical reading for the dealer or salesman who wants to know his own car better. More pictures, a wealth of them, in this section.

If you want to put the telescope on the coming show season and enjoy yourself while you are getting some useful information make a note to watch for this Before Shows Number of Motor World.

Next Week's Number



Hiring and Training a Retail Automobile Sales Force—By one of the most successful automobile merchants in the country. Ideas in the story for every dealer.

Some Facts About Used Cars—By two decidedly well informed practical used car men, one a dealer, the other the head of a used car co-operative plan.

Sales and service information, news of the industry, interesting pictures, all the features that make up the regular weekly issues of Motor World.

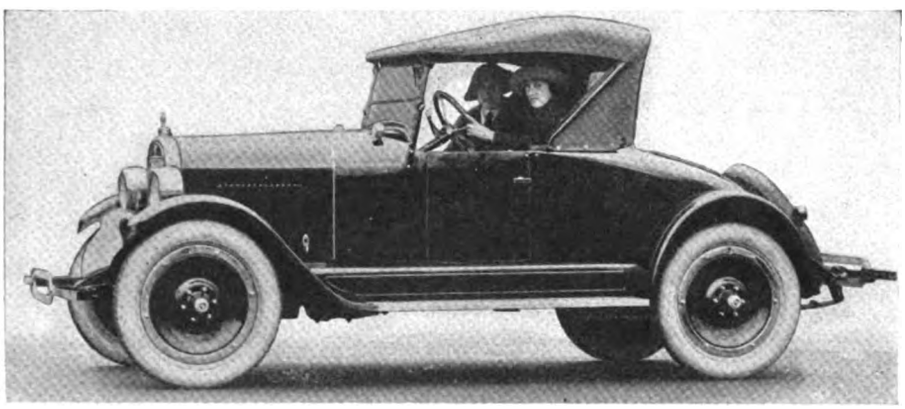
Maxwell Brings Out Sport Models



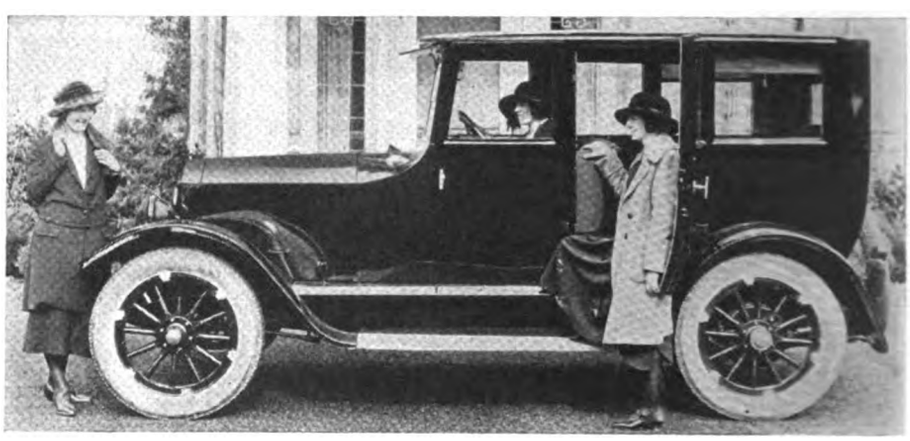
TWO sport models are added to the Maxwell line. A sport phaeton at $985 and a sport roadster at $960. The bodies are painted Chester hunt red with running gear and disk wheels in black. The additional equipments include drum-type head lamps and tie-rod and parking lamps. The radiators, Moto-Meter and door handles are in nickel, the latter having a black aluminum inlay. An aluminum bead runs around the hood at the cowl. The upholstery is long-grained patent leather and the top is olive drab with rubber insert. The equipment also includes a spare cord tire which is incased in an envelope type olive drab duck tire cover. The left front fender of the phaeton model is designed and countersunk to receive the tire.

On the roadster the extra carrier is on the rear. Nickeled spring bumpers are furnished both front and rear. An innovation is the assurance against theft of the Moto-Meter for one year.

The phaeton is equipped with a large trunk and dust cover mounted on a nickel plated trunk rack at the rear. Bright finish aluminum trunk bars protect the body.

The Maxwell sport phaeton $985

The Maxwell sport roadster $960



A New Phaeton and Sedan Model for 1923 Dixie Flyer

FOR 1923 the Dixie Flyer chassis will remain practically the same as before, but the bodies have been changed in many minor details. The phaeton front cowl is one solid sheet of metal attached from one side of the sill to the other side, thus forming a complete brace over the front cowl and dash. The front dash is made of hardwood and the side posts are mortised to fit corresponding gaining in the sills; all being glued and screwed in place.

The top irons are drop forgings bolted to at least two parts of the body to distribute the strain. The center panels are double braced and reinforced with brace irons extending through to the main sill at lock post of front doors, and the hinge pillar post is reinforced with the front seat fillet extending from main sill to the top of the front seat top rail, thereby making one continuous seat.

The rear side and back panels are made of one piece, spot welded, forming a continuous piece of metal with no nailing or moulding to cover the joints.

The curtain box in the phaeton is built into the rear of the front seat and is roomy enough to lay the curtains flat without breaking the windows.

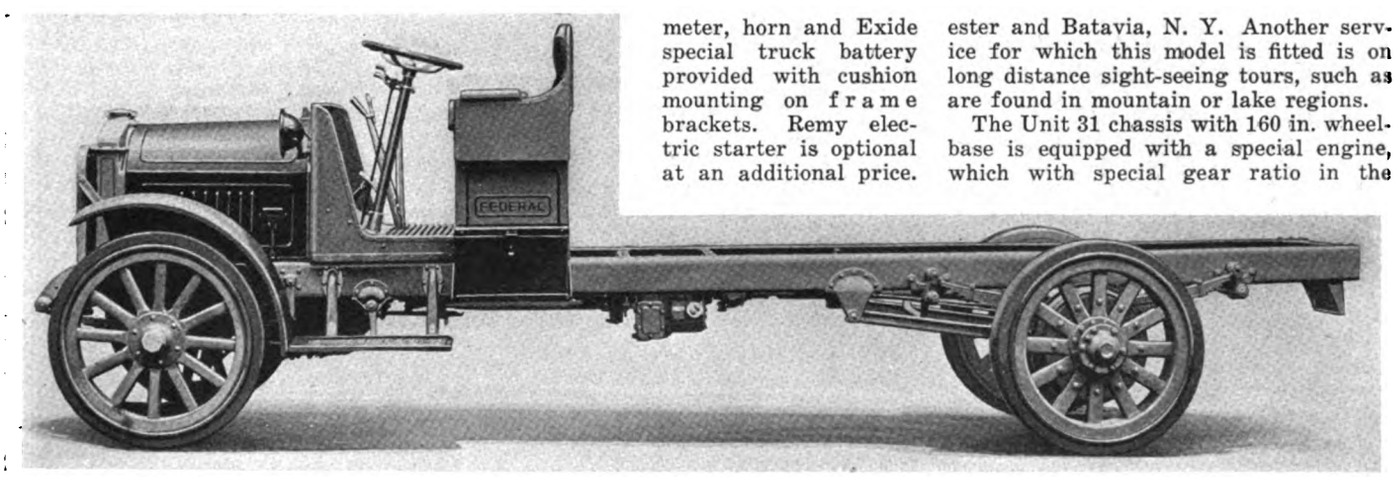
Federal Adds a 2-2½ Tonner



THE Federal Motor Truck Co. has added a new 4000 to 5000 lb. capacity truck to its line under the model number U-2. This chassis will be made up in three wheelbase lengths, the shortest being 12 ft., the standard 13 ft. and the longest 14 ft. It will be provided with a short or dumping loading space of 110 in., standard 134 in. and the longest 158 in. On this chassis there is a body allowance of 1500 lb.

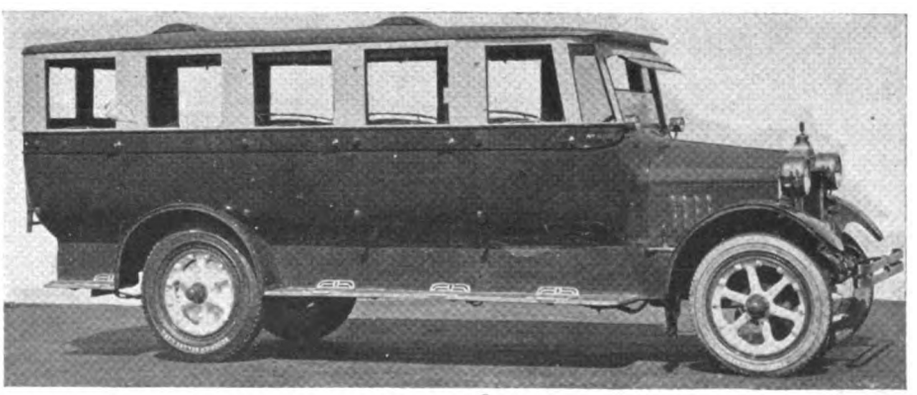
The chassis is equipped with a Continental K-4 motor, this being a 4-cylinder, vertical, L-head mono block type with a 3-bearing crankshaft. It has a bore and stroke of 4⅛ by 5¼ in. and a 35-hp. output at 1300 r.p.m. The truck is fitted with an Eisemann G-4, high tension magneto ignition, Zenith carburetor, Pharo centrifugal oil type governor, Borg & Beck clutch, Detroit Gear & Machine Co. gearset. The front axle is Federal design and manufacture and the rear axle

Elcar Landaulet Taxicab

The Elkhart Carriage & Motor Car Co., Elkhart, Ind., has announced a new landaulet taxicab. The chassis used is the same as the standard Elkhart touring car, but it is equipped with special truss rods in the frame and other features suited to taxicab construction

Side view of new Federal Model U-2, 4000 to 5000 lb. capacity truck

Timken-Detroit. The clutch is provided with four forward speeds and one reverse, the ratios in the box being 5.899 to 1, 3.206 to 1, 1.752 to 1 and direct on fourth. The reverse is 7.078 to 1, and the final ratio at the rear axle is 7.75 to 1 on the standard truck with 8.5 and 9.25 optional.



The chassis follows along the usual lines, the gearset being mounted as a separate unit with divided propeller shaft and four Spicer universal joints. The truck propels through radius rods with the torque taken through the springs. The tire equipment includes 36 by 4 front, 36 by 7 single or 36 by 4 dual rear. The steering gear is Gemmer type with 18 in. hand wheel. The gasoline system is provided with a 20 gal. tank mounted on the chassis frame under the seat, and the fuel feed is through a Stewart-Warner vacuum system. The frame is pressed steel channel section 6 in. deep and ¼ in. section, 34 in. wide. The height of the frame from the ground when loaded is 29 in. front and 30½ in. rear. The chassis is lubricated throughout by the Alemite system. The electrical equipment provides Remy electric generator, electric side, tail and instrument lamps, ammeter, horn and Exide special truck battery provided with cushion mounting on frame brackets. Remy electric starter is optional at an additional price.

Selden Nineteen-Passenger De Luxe Bus

BUILT particularly for interurban and long distance sight-seeing service, the Selden Unit 31 De Luxe model is equipped with a Brown body seating 19 passengers, including the driver.

These buses are in use as "through" or "limited" buses between Cleveland and Loraine, Ohio, making no stops en route. Another route is between Rochester and Batavia, N. Y. Another service for which this model is fitted is on long distance sight-seeing tours, such as are found in mountain or lake regions.

The Unit 31 chassis with 160 in. wheelbase is equipped with a special engine, which with special gear ratio in the worm-drive rear axle gives plenty of speed and yet all necessary power for hard pulls. The body is 16 ft. 8 in. long back of the driver's seat. The exterior paneling is 18 gage terne plate, and the roof is solid panel covered with heavy white duck heavily painted. The interior is lighted with six dome lights The tire carrier is under the chassis frame at the rear. Curtains, heaters and collapsible luggage carrier on the rear are provided as equipment.

The Selden Unit 31 bus which seats nineteen passengers

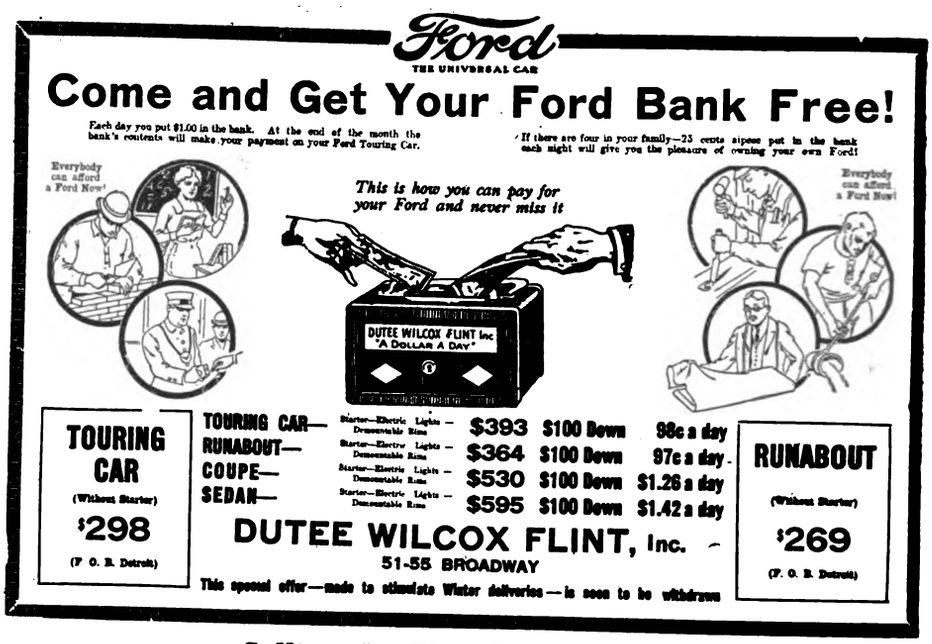
Making the Holidays Help Sell More Cars

How a Boston Dealer Used Thanksgiving to Attract Prospects and Build Good Will

THE holiday season is on and between now and next summer nearly every month presents the opportunity of doing something unusual in a merchandising way by linking it with some particular holiday.

Special window and salesroom displays are always in order for holiday efforts. These may be as simple or as elaborate as the dealer wishes to make them. The important thing is to get into these displays the keynote of the particular holiday.

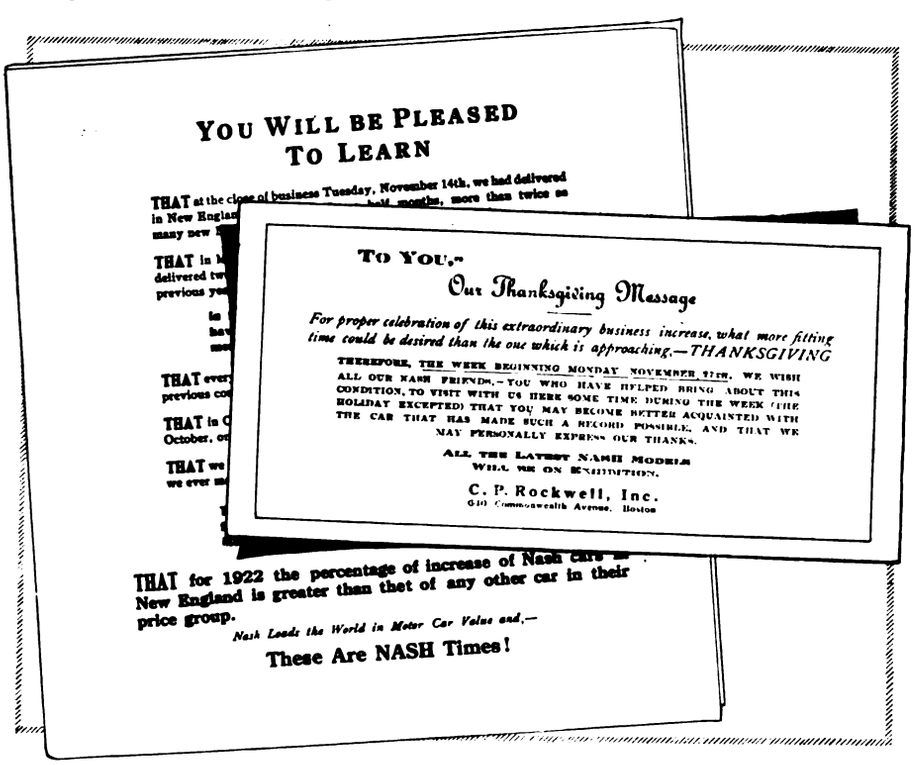
One way in which a dealer can cash in strongly on a holiday effort of any kind is to make it an occasion for inviting people to visit the salesroom during the holiday week.



This idea was used effectively by C. P. Rockwell, distributor of Nash cars in New England, this Thanksgiving. On Nov. 15 C. P. Rockwell, Inc., had delivered twice as many cars in the ten and a half months of 1922 than for the entire twelve months of 1921. This increase was in a measure due to the co-operation of Rockwell's owners in his system of following them up for new car prospects.

As an appreciation of this co-operation Rockwell sent out a little Thanksgiving message to his owners. It expressed his appreciation of their friendship and faith in his company and Nash cars. The message told the reader of the success of the company during 1922 in short paragraphs which made comparisons with last year and closed with the Nash merchandising slogan, "These Are Nash Times."

Inclosed with the letter was a card inscribed as follows: To you, Our Thanksgiving Message. For proper celebration of this extraordinary business increase, what more fitting time could be desired than the one which is approaching—THANKSGIVING.



Therefore the week beginning Monday, Nov. 27, we wish all our Nash friends—you who have helped bring about this condition—to visit with us here some time during the week (the holiday excepted) that you may become better acquainted with the car that has made such a record possible, and that we may personally express our thanks.

There was a personal touch to the invitation that was effective, and the results were highly satisfactory.

Selling the Time Payment Idea

This advertisement in a New Haven paper reveals an interesting development of the time payment plan. It utilizes the savings bank idea of providing purchasers with individual banks in which to put their savings

This is the way a dealer invited his patrons to visit his establishment. The oblong card is the formal invitation. The folder underneath it told about the phenomenal year's business he had enjoyed. The two pieces were mailed in a single envelope

Sears Tire Equipment Sold

DAVENPORT, IOWA, Dec. 12—James A. Kerrigan and Leon A. Hass, trustees for the Sears Tire Equipment Co., at a sheriff's sale bought in the entire property for $32,168.

After-Sale Service Sells Accessories

Dealer Sells Equipment with Cars by Mentioning Definite Needs of the New Car Buyer

FRED V. CLUTE, Chevrolet dealer at Cohoes, N. Y., has a very practical way of putting over the "Ask 'Em to Buy" idea.

When he sells a new car, he says:

"You want a license, don't you? You don't want to be pinched first thing. Let us fix you up right here.

"And suppose you should get a puncture first thing. That's very likely to happen. You'd better have a spare tire and tube anyway, in case of an emergency, don't you think so?

"Then, too, we filled your tank with gasoline and crank case with oil. Now, you'll find in breaking in a new car, that you ought to use the oil that's recommended for it. How about a 5-gal. can of oil? Fine, we'll fix you up.

"You ought to have a motometer, too, because you are liable to overheat your engine at first, and a motometer will keep you posted. Sure, we'll put one on right now.

"Then you'd better take this service coupon book along. It's good at the shop for 10 hours' free service. If any little thing goes wrong, run right in and we'll fix it and just tear out coupons for the time. So long; good luck."

Clute has sold 175 Chevrolets so far this year, and less than 10 have gone out without the above list of accessories. These amount approximately to $37 a car—in the aggregate quite a nice little item in the year's business.

Do You Circularize Doctors for Tire Sales?

Here is a letter that was effectively used by the Bargain Tire Co., Fort Worth, Tex.:

Dr. A. C. Jones,
City.

Dear Doctor:

There is an old saying which runs: "When a doctor makes a mistake, he buries it."

That was applicable to the medical profession of a hundred years ago, but not of to-day when the modern physician knows the human anatomy like the old time schoolboy knew his multiplication table.

If the modern doctor makes a mistake, it is not in the practice of medicine, but rather in overlooking some things in his consuming desire to do everything possible for his patient.

How are your automobile tires? Better let us examine them or fix you up with a couple of extras in case of punctures or blowouts when you are rushing to the bedside of some patient far from a repair or service station. These things happen sometimes.

You do not wish to make a mistake. Your patient doesn't want you to. We are prepared to prevent it. Drive around or call us, and we will give you service that satisf.es.

Yours to serve,
The Bargain Tire Co.

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer

Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Service on an Annual Payment Basis

THE Auto Maintenance & Service Station, a large independent repairshop in New York City, is getting results with an active campaign to sell car owners maintenance on an annual basis. The station has a plan under which it offers owners monthly inspection and lubrication, together with necessary adjustments and repairs, at a flat rate of $120 a year. The plan includes labor, grease and oil without extra charge, but requires the owner to pay for replacement parts.

This service station is using salesmen to sell the plan to car owners and is backing up the sales campaign with circulars and pamphlets telling about the station's facilities for service work.

An ad like this can be used to merchandise a combination offer of accessories. Note the prominent mention of the price and the grouping of the accessories—all for the purpose of improving vision. Dealers will think of other combinations

Crankshaft and Connecting Rod Alignment Tests

Roundness, Straightness and Parallelism to Be Considered in Rebuilding Engines

THE testing of crankshafts and connecting rods is one of great importance in the rebuilding or overhauling of engines. In years past, not very much attention was paid to these details with the result that a high percentage of refitted bearings went bad shortly after the engines went into service again, and nobody seemed to know what was the matter. It has only been within the past two or three years that precision instruments have generally been used in the automobile repairshop, but with their more general use, it has been possible to cut down considerably the number of jobs that go wrong.

It is a waste of time and effort to hand scrape or machine fit bearings to a shaft that is not true. Under no possible conditions can a bearing so fitted give good service, and the shop is almost always called upon to do the work over again at its own expense. If the parts were somewhere outside the engine where they could be easily reached, this might not be so serious, but this kind of a bearing job done over again practically means the rebuilding of the engine. Great importance should therefore be attached to the correct measurements and indications of the shaft before the bearings are fitted.

Although the crankshaft is the most important member as far as measurements are concerned, the gear distance, the parallelism of the holes in the connecting rod, the piston diameter and the cylinder bore are also very important, and it is upon the correct fitting of these various parts that the success of the work is dependent.

Gaging the Crankshaft

First of all the portions of the crankshaft that are carried in the bearings must be round to within certain limits. It is physically impossible to make anything absolutely true because there is no such thing as absolute roundness. If magnified several hundred times the surface of a finely ground shaft would have the appearance of mountains and valleys. However, there are certain mechanical limits within which the parts will give good service and the operation and use determine the limits. A crankshaft should not vary in roundness more than half a thousandth.

The method of determining the diameter is shown in Fig. 1. A pair of micrometer calipers reading directly to one thousandth is used and interpolations can easily be made to a half thousandth. Measurements are taken across at least three points as shown in the diagram, and if there is any doubt about the shaft, four or five measurements are taken. Micrometers usually operate only over a range of 1 in. The larger sizes are usually provided with devices for extending the barrel by increments of 1 in. so that smaller diameters can be measured. It is therefore necessary to select a micrometer with a range in which the diameter of the crankshaft falls. Assuming the diameter of the shaft to be 2⅛ in., as shown, a micrometer reading from 2 to 3 in. would be used. The micrometer shown in Fig. 1 reads exactly 2.125 or 2⅛. This is arrived at by counting the number of graduations exposed on the shank, in this case numbering 5 and as each one of these are equal to .025, the total would be .125. Each graduation on the barrel represents .001, but as in this case it is 0, there would be none to add.

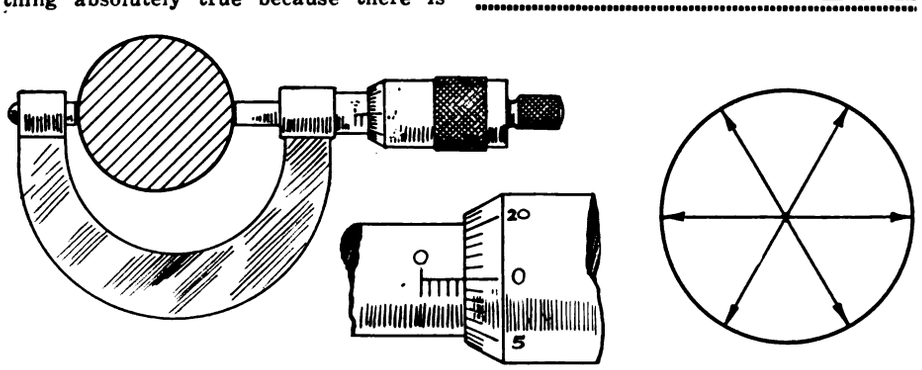

Fig. 1—Using a micrometer on a crankshaft. The reading shown here is 2.125 in. The diagram shows where to take the readings

Better Mechanics

Article No. 270

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

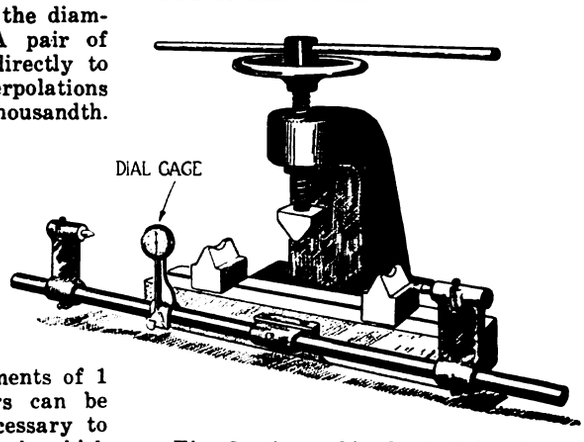

Fig. 2—A combined straightening press and testing jig for crankshafts and camshafts

The ratchet stop at the end of the barrel allows all measurements to be made with uniform pressure. This should always be used as it is quite possible to force the barrel from 5 to 10 thousandths which would give a false reading.

Each main bearing and each connecting rod bearing is measured in this way and with a little experience this can be done in much less time than it takes to tell it.

The allowable variation would be one-half a graduation on the barrel on a micrometer reading to one thousandth. If a micrometer reading to one ten-thousandth is used, then the limit of variation between any measurements would be five ten-thousandths. It is not necessary that each of the bearing parts of the shaft be the same diameter as long as each one measures round or the same diameter at several different points. In fact, many crankshafts have main bearing surfaces of different diameters.

Alignment Tester and Press

Having gaged the crankshaft for roundness, the next point is to ascertain whether it is in alignment. This is determined by one of two methods.

There are a number of tools on the

Digitized by Google

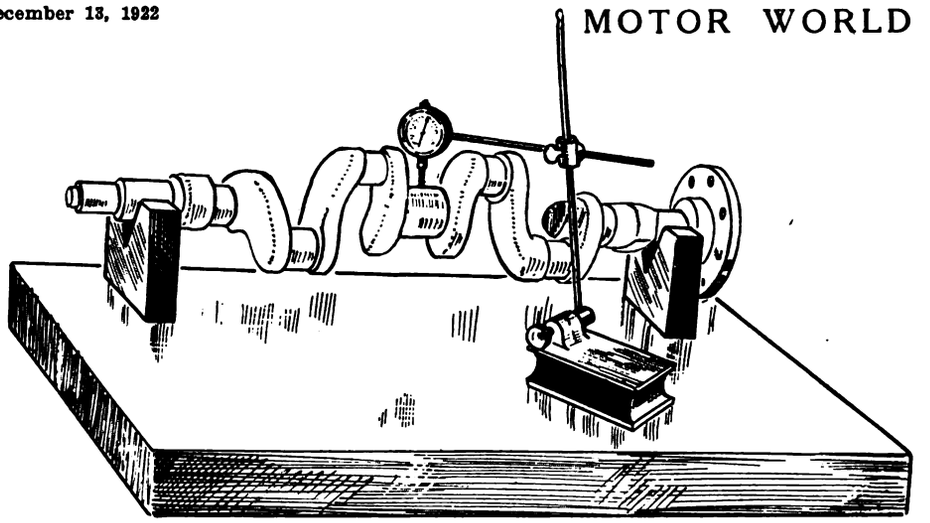

Fig. 3—Testing crankshaft alignment on a surface plate with V-blocks, a surface gage and dial gage

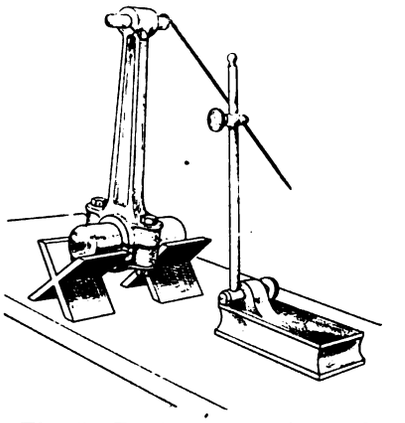

Fig. 5—Testing connecting rod alignment with a surface plate, V-blocks and a surface gage

market having a combination feature of centers to swing a shaft and a screw press to straighten it. One of these is shown in Fig. 2. The centers are usually mounted on a bar in front of the press, one being stationary and the other movable. A spring holds one of the centers firmly against the shaft. A swinging arm also mounted on the shaft carries a dial gage with graduations in thousandths of an inch.

In order to make an accurate test, the centers of the shaft must be absolutely clean and free of chips, filings or dirt. The slightest trace of foreign matter in the center holes will make it impossible to get a correct reading. For this reason some mechanics prefer to make the tests by swinging the shaft on a pair of V-blocks instead of the centers.

The dial gage is brought in contact with each main bearing in turn and the shaft swung around a complete revolution. A variation of half a thousandth is permissible, and in the case of a center bearing, the allowance could be increased to one thousandth, although this is not so desirable. It can be easily seen that if the shaft is bent that the dial will show variations which will show exactly the extent of the bend. In reading the dial it can be set to zero by turning the bezel till the zero point is opposite the pointer, but this is not necessary as the movement of the hand can be very easily seen no matter where it is on the dial.

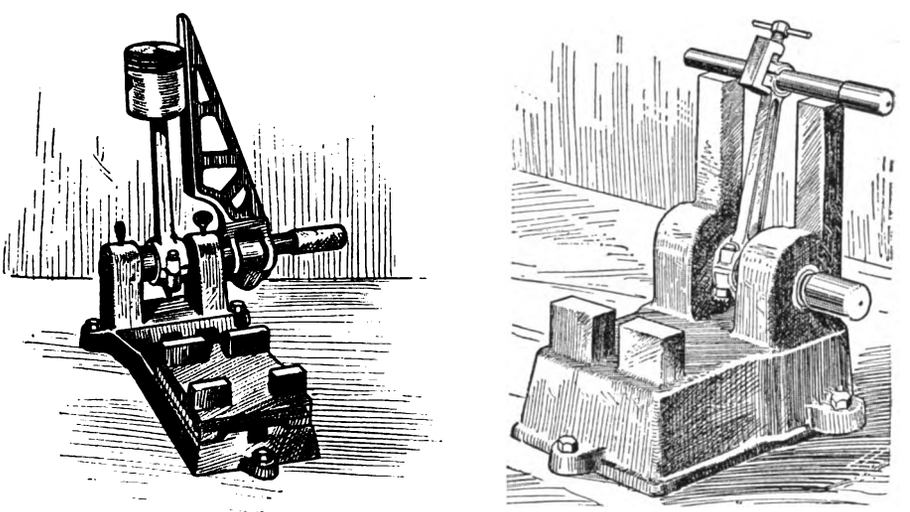

Fig. 4—Two types of connecting rod alignment gages

An alternate method where a straightening press is not available is to build up two V-blocks on a surface plate until the shaft can be swung clear. A surface gage is then fitted with a dial gage and the same procedure is followed as in the case of the straightening press attachment. The layout of the equipment is shown in Fig. 3. If the V-blocks are not heavy enough to sit firmly on the surface plate they should be clamped.

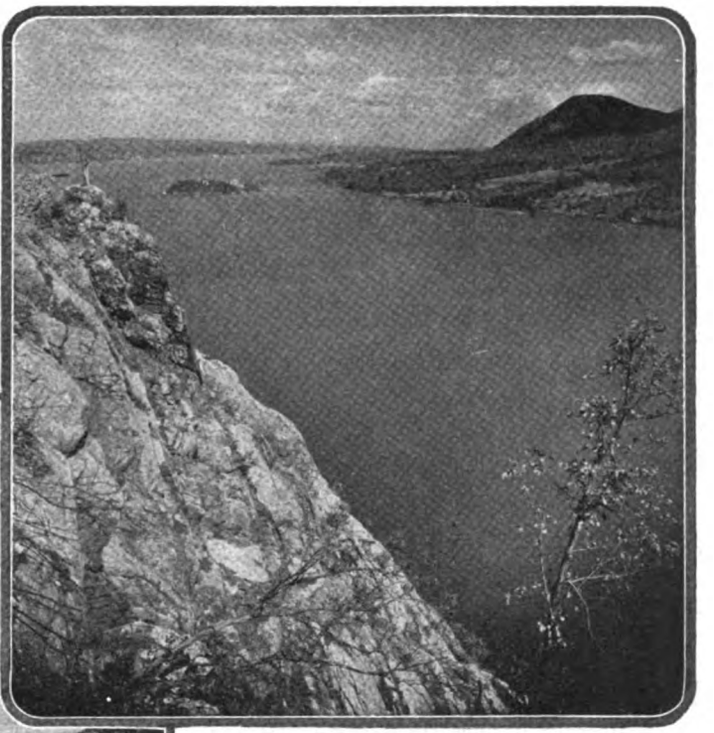
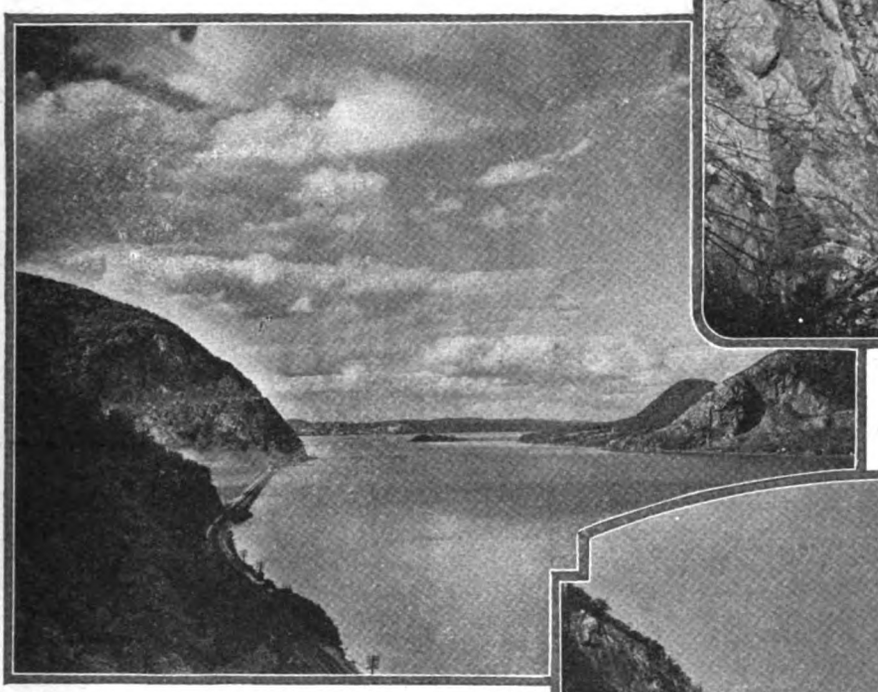
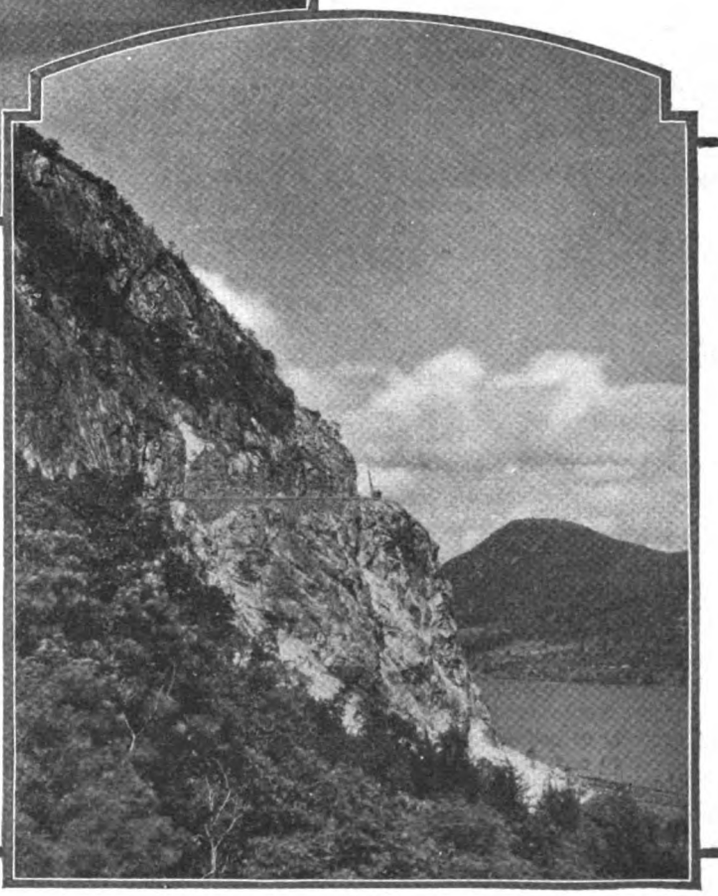
Highway Builder Is Revealing to the Motor Tourist

BEAUTY and utility are combined in some of Oregon's remarkable highways. One remarkable example of road building is the great scenic highway now under construction which circles Mount Hood, beginning and terminating in Portland. This road penetrates wild country, rising to an altitude of 7000 feet, touching the snow line of the mountain in some places and entering Portland at sea level. The highway, which will be open only during the summer months, being closed by snow the rest of the year, will cost several millions of dollars.





AN interesting example of combining beauty and utility in highway construction is the Columbia River highway, in Oregon, 200 miles of which are finished in hard surface pavement. It is the main commercial highway east and west across the State as well as being, perhaps, one of the greatest scenic highways in America. The photographs, left and above, are typical of the scenery where the highway follows the river, which has cut a path through the Cascade Mountains at this point. Handsome concrete arches and some hewn through the side of the mountain are interesting features of this portion of the road.



Digitized by Google

Many of America's Most Gorgeous Scenic Treasures

THE Storm King Mountain road, three views from which are shown on this page, has taken its place among America's most picturesque and useful highways. The road, four miles long, was constructed around Storm King Mountain at a cost of $700,000, an accommodation for motorists made necessary by the enormous increase in automobile traffic between New York and Albany, the desire for an accessible road into the Catskills and the plans for opening of the Interstate Palisades Park.

THE new road gives two routes south from Newburgh and eliminates the wide detour through Orange and Sullivan counties to reach New York from the north. It connects at Highland Falls with the route which extends through the southern tier of counties to the Pennsylvania State line at Lake Erie. At Albany it connects with improved highways leading to Montreal, Buffalo and Massachusetts. At Bear Mountain it connects with the roads through Palisades Park. The road is twenty-four feet wide with a sixteen-foot bituminous macadam pavement. It follows the beautiful Hudson River at an elevation from 200 to 400 feet above the river. The center and lower pictures give a glimpse of the highway rounding the mountain.

Must Provide Safe Working Conditions

Negligence as an Employer May Prove Costly to Garage or Repairshop Proprietor

THE proprietor of every modern garage and repair shop is, to some extent, an employer of labor. He hires men to run machinery, to do repair work, to drive cars and for a number of other purposes.

The question then becomes important: How much care must he use to prevent his employees from being injured in the course of their work? In states like Massachusetts, New Jersey and New York, which have a Workmen's Compensation Act, which gives the mechanic some stated sum per week during the period of his disability, the employer is covered by an insurance policy in a great majority of cases, but in other states, where there is no law of this kind, the dealer has not thought it necessary to secure insurance, preferring to take a chance.

In cases like these the dealer should spare no effort to procure safe machinery and to see that it is kept in a safe condition, and, further, he should not forget that his workmen are entitled to a safe place in which to work.

An example of what an injury to an employee may cost an employer is a late case which was decided in Michigan. In that case a man who was employed by a motor car manufacturer was struck in the eye by a chip from a cast-iron frame. At the time the accident occurred he had been walking down an aisle in what was called the assembly room and was carrying some sheet brass to one of the departments in that building.

He brought suit against his employer and claimed that (1) he had not been provided with a safe place in which to work; (2) there was negligence because his fellow workmen were chipping off a cast-iron frame, which was used to support the chassis of motor cars, with a cold chisel and hammer, and (3) that he had not been notified that dangerous work was being done, nor had any screens or covering been erected at the place where it was being done.

The manufacturer very naturally set up the contention that the injury was one which could not have been reasonably anticipated, as it was merely work of a temporary character.

The Court held that the manufacturer was negligent and that a judgment for $1,741, which the employee recovered for the loss of his eye, was not too much, because the former should have warned the latter of the flying chips or else should have prevented them from flying, and that the manufacturer was not relieved because the work was temporary work. Webb vs. Buick Motor Co., 148 N. W. (Mich., 793).

Not only does this principle of law apply to machinery, such as power drills, lathes, etc., but it also applies to motor cars which might be used for emergency or repair work on the road and towing disabled cars into the garage.

In one late case it appeared that a motor car manufacturer had provided a one-half mile dirt track for testing purposes. The testers employed by the manufacturer were accustomed to take the completed cars out on this track and test them as regards speed. One day while a car was being tested it was driven too rapidly around a curve and an accident occurred which caused the death of the tester. His representatives started suit against the manufacturer, claiming they had been negligent in the construction of the track and for that reason they were entitled to damages for the tester's death.

The Court decided against them, however, because it was shown on the trial that the straightaway portions of the track were safe for high speed driving. The Court said that the tester should not have relied upon making the turns at high speed but should have slowed up each time he approached a curve.

The theory of the employee's representatives, who brought this action, undoubtedly was that he had not been provided with a safe place to work, but the Court discarded this theory.

Practical Questions of

Business Law

are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

The Trust Agreement

Editor Motor World:—In your April 5 issue you have an article on the advantages of doing business under a Trust Agreement. Will you kindly give me an outline of organizing under the same and if it will be better than a limited partnership?

I am contemplating enlarging my business and take in a partner, but as I don't care to jeopardize my homestead by any miscues on his part, I want to get started right.—W. T. S., Gilette, Wyoming.

Answer:—There is nothing we can add to our former article as to the advantages of doing business under an agreement of trust. It is the up-to-the-minute way of doing business, having neither the disadvantages of doing business as a corporation or as a copartnership.

Your local counsel can prepare the necessary papers for you. If perchance he has never heard of doing business in this fashion, however, you can refer him to "Sears on Trust Estates as Business Companies." Only the states of Massachusetts and Oklahoma have statutes regulating the doing of business in this fashion, so you will not be unduly restricted in your State, as you will organize and do business under the old common or unwritten law.

Creditor Liable for Repairs in This Case

That where a debtor and a creditor agreed that the latter should accept the former's automobile in payment of the debt and advised a garageman who was repairing the automobile to that effect and the garageman treated the person to whom the car was transferred as the owner he was liable for the repairs according to the rule laid down in the Pennsylvania case of Selznick vs. Holmes reported in 118 Atlantic Reporter at page 552.

Repairing Car on Left of Road Lawful

That a traveler may use the left hand side of a public highway to examine or repair his motor car in Wisconsin without being liable to a charge of unreasonably interfering with other cars on the highway was the decision in the case of Schacht vs. Orwick reported in 190 Northwestern Reporter at page 88.

Driver Responsible for Safety of Guest

That a guest entering an automobile takes it and its driver as they are but nevertheless the owner of the car is liable if the guest is injured through the driver's failure to use ordinary care and diligence so that no new danger is created, was the decision in the Connecticut case of Dickerson vs. Camm reported in 118 Atlantic Reporter at page 518.

Repairshop Shortcuts

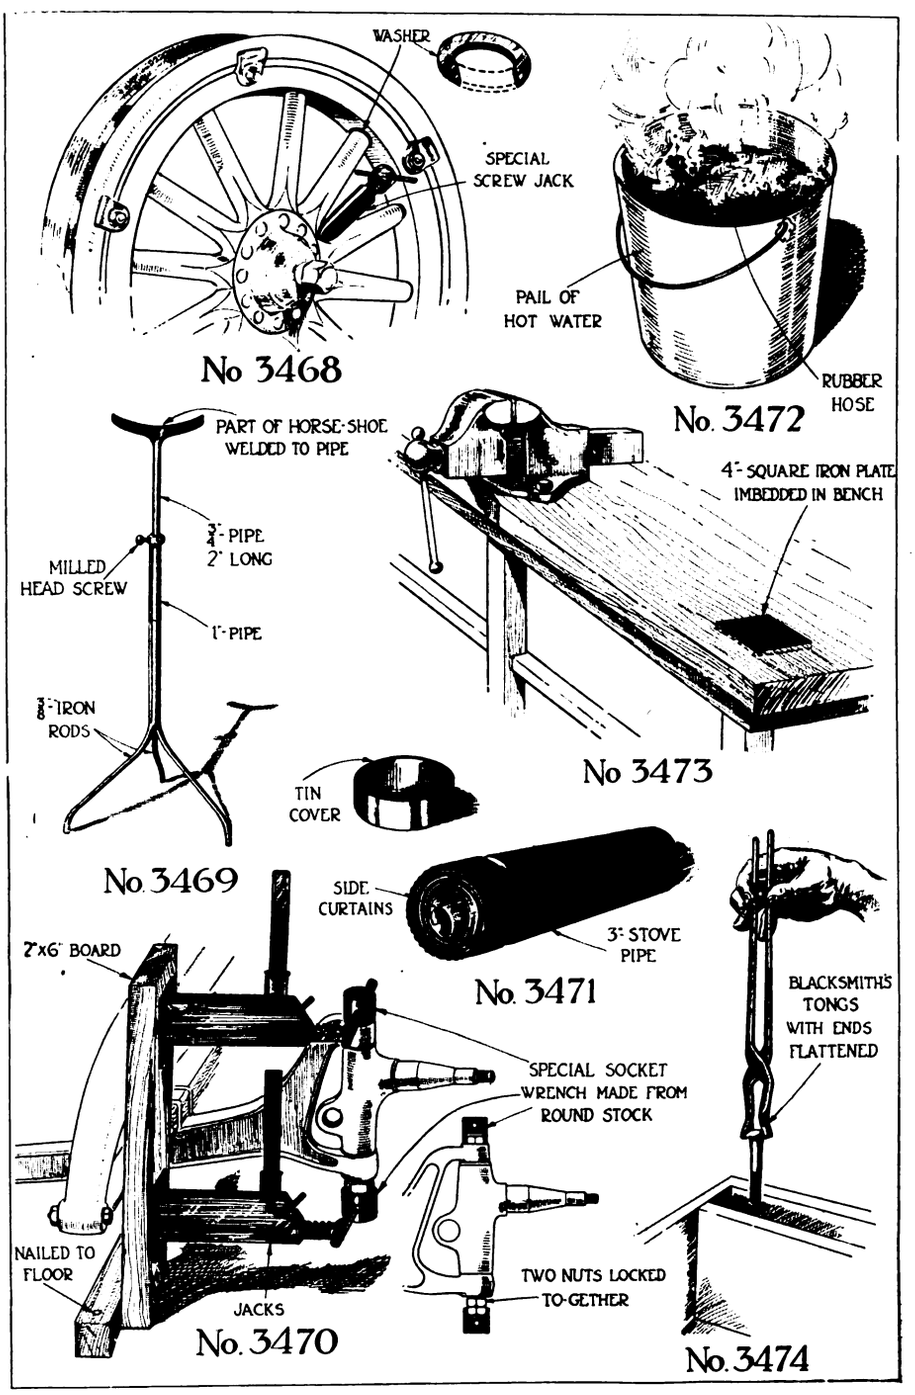
The Well Equipped Shop Gets the Business

THERE is a great deal of truth in this slogan which has been adopted by several shop equipment manufacturers. The shop that still uses hand methods of grinding valves and takes nuts off with a solid wrench instead of a speed wrench cannot expect to compete in price with the shop that has all up-to-date facilities. And not only should the more expensive equipment be good and complete, but the minor shop helps and shop made equipment should be just right for the purpose or it is of no use to the mechanic and creates a bad effect on the mind of the customer.

Send your shortcuts to Motor World. You will receive one dollar for each one accepted. Those which are practical and not previously printed will be accepted and printed in this department.

No. 3468—To Remedy Squeaking Wheels—Wooden wheels that have dried out and squeak can be silenced by using a special screw jack which can be constructed in the shop. A thin cut washer is placed between the end of the spoke and the felloe to take up the lost motion.—H. R. Grigsby, Oklahoma Gas & Electric Co., Oklahoma City, Okla.

No. 3469—Adjustable Work Stand—An adjustable work stand enables one man to handle large or long work in a forge fire. It is made of 1 in. pipe, to which are welded three ⅝ in. iron rods, 18 in. long, to serve as legs.—H. J. Engel, New Braunfels, Tex.



No. 3470—Removing Frozen Spindle Bolt—A frozen spindle bolt can be started by using a special socket wrench on top of the bolt and two nuts locked together on the bottom. Both of these wrenches are pushed by means of jacks footed against the board held by the frame at the upper end and by a board nailed to the floor at the lower end.—R. G. Dasse, Burlington, Vt.

No. 3471—Stowing Curtains—Side curtains are stowed away in a piece of 3 in. stove pipe, to which can be fitted a tin cover. This prevents breaking of the celluloid windows.—H. R. Grigsby, Oklahoma Gas & Electric Co., Oklahoma City, Okla.

No. 3472—Installing Radiator Hose—In cases where it is difficult to force the hose over the male joint, the hose can be soaked for a few minutes in a pail of hot water which expands the hose slightly and also makes the rubber soft so that it can be clipped and placed.—Bayard Sharpe, Los Angeles, Cal.

No. 3473—Bench Anvil—A handy bench anvil that is out of the way and which protects the work bench is made of a piece of iron about 4 in. square. A square hole is made in the bench over a post and the iron set in flush to the top of the bench.—Edward Bredar, Rock Island, Ill.

No. 3474—Bolt Inserter—A tool for placing bolts in inaccessible places is made from a pair of blacksmith's tongs with the ends flattened and bent over at right angles. This gives a firm grip on the bolt head.—H. J. Engel, New Braunfels, Tex.

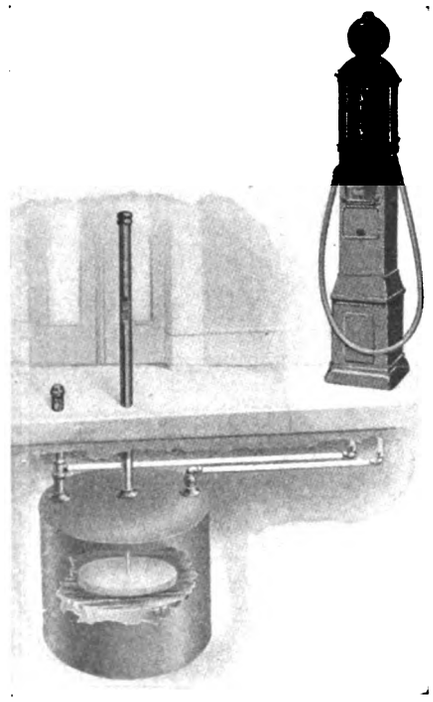
Equipment for the Shop

New Machinery and Tools for Saving Labor and Time

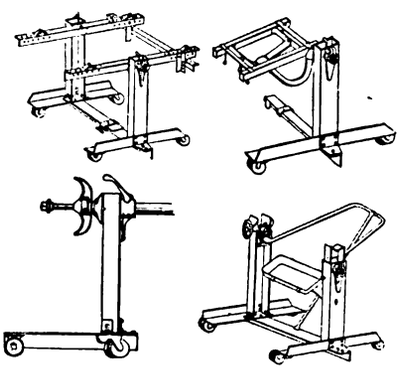
VEC Bearing Adjusters



VEC Products Co., Cedar Rapids, Iowa

The adjusters are placed underneath the nuts on the connecting rod cap bolts, where they automatically adjust for wear. They are made in sizes to fit ⅜-in., 7/16-in. and ½-in. bolts.

Beacon Visible Gasoline Dispenser

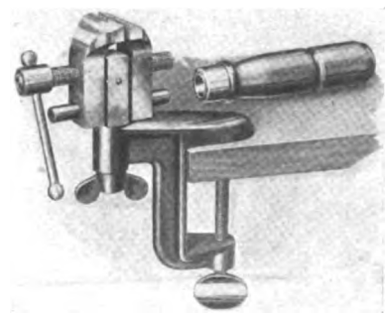


Beacon Visible Pump Co., Inc.
720-724 West Breckenridge Street,
Louisville, Ky.

This is a visible gasoline dispensing system consisting of a curb filling station, underground tank and necessary accessories. The curb outfit has the glass bowl mounted on top and surrounded by a steel crate. Illumination and light at night is secured from an electric light in the crate. The anti-drip valve is self-closing and the drain valve is opened by closing hinged cover to the opening in dispenser case, thus draining the 5-gal. container. The angle check valve is located above the underground tank, is accessible and has the approved leather seat. The ⅓ h.p. motor is vapor proof and is self-oiling and the vacuum strainer and primer are quite accessible. The pumping unit is very rapid, dispensing 5 gals, in approximately 12 sec. Will handle 10,000 gals. of gasoline for $1.50 at 10 cents per kw. The height of the machine is 8½ ft.; weight 650 lbs. By removing a few bolts the entire outer case can be removed in two parts and all working parts are accessible.

Four-in-One Universal Stand for Engines, Axles and Radiators

Motor Service Equipment Co.,
Hunts Spur, Mich.



Prices: Universal Stand, $37.20; Axle Attachment, $10.80; Ford Engine Stand, $17; Radiator Attachment, $8.40; Interchangeable Stand, including Radiator Attachment, $50.

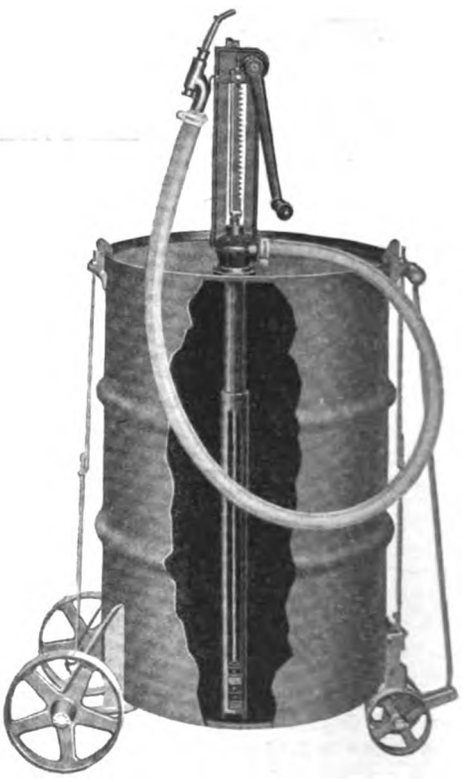
This is a universal stand for engines, axles, Ford engines and radiators, requiring only 2 to 5 minutes to make the change from one stand to another. The spindles of the engine's supporting rails are of the tubular type, 1 15/16 in. in dia. The upright members are heavy steel plate, bent in the shape of 6-in. channel having 3-in. legs. The adjustment of this stand is made in the base cross members, which telescope and are locked with one hand wheel. The radiator attachment tilts in all necessary positions, and the locking clamp takes care of one and a hand lever takes care of the other tilting position. The net weight of the entire assembly is 350 lb.

Starrett Combination Vise

L. S. Starrett Co., Athol, Mass.
Price $4, with clamp $5

This convenient new hand vise will be known as No. 86. A ball-end handle is used for tightening the jaws. A clamp is furnished which makes it possible to use this tool as a bench vise. When used with the clamp, the vise can be adjusted to any point in a complete circle. The capacity of the vise is about 1½ in.

Pumpless Blow Torch



Pumpless Blow Torch Co., Inc.,
Keystone Building, Pittsburgh, Pa.

The fuel used in these torches is Bu-Tane, which is supplied in steel cylinders. The torch may be started and operated in any position. It is simply necessary to open the valve and light the burner to start the torch.

Handy Ben Self-Measuring Grease Pump

Bennett Injector Co., Muskegon, Mich.

This is a self-measuring, 1-lb. grease pump for steel or wooden barrels with 2 in. bung. It is adjustable and attached to half or full size barrels. The suction chamber and piston plunger are down at the bottom of the barrel where the grease is trapped and lifted out. The pump will handle grease that will barely flow or gravitate. The pump shoots 1 lb. of grease at each stroke of the piston and a large set screw on the head of the pump enables the operator to adjust for different consistencies of grease. A 20 per cent range of adjustment takes care of every requirement. The hose is fitted with a pistol grip, non-drip nozzle which stops the flow of grease. A portable truck enables the grease outfit to be moved about easily.

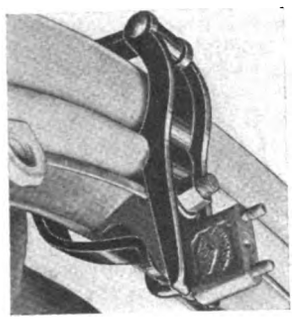
Equipment to Sell

Profit for the Dealer in New Devices for the Car and Truck

Connecticut Replacement Switch

Connecticut Telephone & Electric Co., Meriden, Conn.

Price $4.50



The new Connecticut replacement switch will be known as 190-Y. It has a beveled and black enamel aluminum face plate, of the proper size to cover opening left by the round type switch it replaces. Studs long enough for mounting on either wood or metal dash are included. Both lighting and ignition switches are of the toggle type.

Hercules Spare Tire Protector

Hercules Mfg. Co., Indianapolis, Ind.

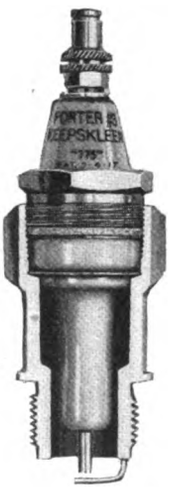
Price $1, without padlock

The device consists of a hinged clamp which fits around the spare tire and rim. The front part of the device is a malleable casting, which takes the place of the regular wedge used to hold the rim and tire on the carrier. The hinged part is a band of high carbon steel. The device is installed by slipping the front part on over the threaded stud, from which the original nut and rim wedge have been removed. The nut has been replaced on the threaded stud and tightened, the hinged band swung up into place and the padlock hooked through both ends of the clamp and the tire carrier bracket.

Melville Foot Rest

Melville Machine Co., 500 Bellevue Avenue, Detroit.

Price $3.75.



This device will fit either button or lever type accelerator pedals. The friction hinge offers the necessary resistance to the weight of the foot without interfering with the operation of the pedal. It is made of polished aluminum.

Porter Spark Plug

Porter Spark Plug Co., 4356 Cottage Grove Avenue, Chicago.

Price $1.

Made in sizes to fit all car, truck and tractor engines. The chamber surrounding the lower portion of the porcelain is said to make this spark plug self-cleaning.

Stover Arrow-Site Rear Warning Signal

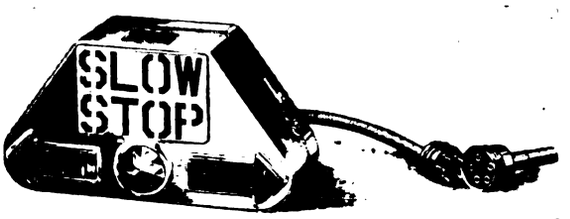
Paul A. Stover, Racine, Wis.

The signal is attached to the left rear fender and shows a green light when the car is going ahead. The green changes to red when the brakes are applied or when the clutch is released. It also indicates right and left turns in red by means of the arrows. When the car is standing the lamp is used as a parking light.

Check-Stop Signal

Meilicke Mfg. Co., 940 Wrightwood Avenue, Chicago

Price $7.50



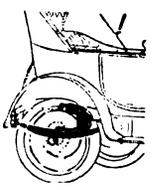
This signal combines stop signal and taillight. It is operated by the brake pedal. Price includes a check-lite. The housing is a one-piece aluminum casting.

Diamond Automatic Automobile Safety Signal

Automotive Distributing Corp., 703 Finance Bldg., Philadelphia

Price, Standard Model—$12.50

Special Model—$15.00



This device signals Rite in green, Left in red, Slow in orange and Stop in red, or in such other colors as may be required. The taillight and a license plate bracket are also parts of the signal. The left and right signals are operated by a switch on the steering arm, and the slow and stop signals by a switch on the service brake rod. The standard model is finished in black enamel and the special model in nickel.

Loadacar Shock Absorber

Fike Drop Forge Co., 953 Harrison Street, Indianapolis, Ind.

Price $5 per set of four.

The device takes the place of the load giving the same spring action and eliminating rebound. It is claimed to give an easy rocking-chair motion while driving over rough roads. It acts to give a full load on the springs when the car is empty.

Digitized by Google

Dealer Proposes Seasonal Discounts on Cars

Believes Plan Would Benefit Dealer and Manufacturer —What Do You Think?

EDITOR Motor World:—Why not a seasonal discount to eliminate the deadlock between a good many manufacturers and a good many dealers on the question of stocking cars in winter? Some dealers don't buy cars in winter for spring delivery because they haven't the funds. Others who have the funds won't buy them in adequate numbers, because the carrying charges eat up too much of their profits. As a result, manufacturers have to operate their plants on the costly basis of rush periods and dull periods. The result all around, for manufacturers and dealers, is a cutting down of profits that might not be necessary on a sliding, seasonal discount plan. Let's look it over.

We'll say a car's discount to a retail dealer is 20 per cent. If he borrows money to carry a stock of cars three months to insure spring deliveries, we'll say, he pays a quarter of 6 per cent, or 1½ per cent, in interest on the investment, and in addition has rental and insurance charges. So he holds his winter stocks down as low as the demands of the manufacturer and the dictates of his foresight will let him. Suppose the manufacturer's list price was so adjusted that he could offer a 30 per cent discount during November, December and January, perhaps even for a longer period on open cars. The dealer could carry stocks without cutting into his minimum discount of 20 per cent; he would even have a margin over that, in fact. His banker, knowing of the plan, would see the wisdom of winter stocking and be more willing than he now is to loan funds. The manufacturer could spread his production more evenly over the year, cutting down his overhead and giving his employees steadier employment.

What do the manufacturers think of the idea? What do the readers of Motor World think of it? I would like to hear from some of them.—Veteran Eastern Dealer.

The Tourists' Ideal Filling Station

Editor Motor World: I've been touring a lot this summer, and I've gotten some very definite ideas as to what is the ideal filling station from the viewpoint of the average tourist.

In the first place, it should be on a marked highway. The average motorist passes through towns only on the marked highways. He dislikes getting off the highways to go to filling stations, no matter how fine these stations may be, because once the tourist has left a marked highway in a city it is generally a pretty hard thing to get back on the highway.

The ideal filling station, too, should be equipped with enough gasoline pumps to handle a considerable amount of business without delays. I know for my own part that there is nothing I hate worse when touring than to get held up at a filling station which is inadequately equipped for the handling of a good amount of business. Time lost in this way is time that is wasted and I think all motorists will bear me out in hating to waste time.

The ideal filling station, too, should have plenty of oil all ready in quart bottles for putting into the car. It should also have a machine ready for shooting in a pound of grease if it is needed. Also, of course, there should be free air and water and I prefer the filling stations where you get the water for your radiator through a hose instead of having to pour it in from a can or a bucket.

But this is only about half of the service which my ideal filling station performs for the touring motorist. Now I'd like to see on a filling station's outside walls some road maps of the territory within a fifty-mile radius. It would be a very easy proposition to get such maps on to the walls of the filling stations and to have these maps so arranged that they would be impervious to weather conditions.

On these maps the distances to all the important points named on the maps could be plainly marked so that everyone visiting the stations could get the distances at a glance.

Then beneath the maps on a blackboard there could, from day to day, be notations regarding the road conditions on the main highways leading out of the city. Only the highway conditions would need to be noted, because the touring motorist cares nothing at all for road conditions on side roads.

There could also be on file at the filling station information regarding the city's hotels and the prices charged. Also there could be information as to eating places and as to garages where cars could be stored for the night and where repair work could be secured.

And, this would be a very important point, there should be information at the filling stations as to the nearby free and pay camps. This camp information could include data about accommodations, water supply, toilets, whether or not there are tents at the camp which can be rented, whether or not there is a store at the camp and what supplies are carried at the store, whether or not there is a place to cook food and whether or not there is a bathing beach at the camp. If the camp is a pay proposition there should also be information as to the prices charged. It would help a lot if the filling station indicated the locations of camps on the maps on its walls and if it had definite and specific information how to reach the camps if they are located off the highways.

Of course, the ideal filling station would have a wash room and a rest room for women. And, of course, it would have cool drinking water for thirsty tourists.

A very important factor in the ideal filling station would be the attendants. Practically all filling station attendants nowadays are courteous and helpful to tourists, but not many of them have actually been over the roads over which they are directing tourists. So at the ideal filling station only those attendants would be employed who had actually been over the highways within a radius of fifty or seventy-five miles of the station. Imagine how much more authoritatively such attendants could talk to motorists about road conditions and distances. And imagine how deeply such attendants would impress themselves upon tourists and how the tourists would talk to other tourists about these attendants. All of which would, of course, make for more business for the filling station.

Filling stations nowadays so often call themselves service stations. That's exactly what the tourist's ideal filling station is—a service station at which it is possible for the tourist to get all the service he can possibly need. And in this letter I've tried to indicate some of the outstanding services which would most greatly appeal to the tourist who patronizes filling stations.—*Indiana Merchant.*

Our Industry

THEY called them empire builders—those railroad builders of pioneer America. They laid a foundation of transportation which has built an empire of agriculture, industry and commerce. To-day a new agency of transportation is fostering a new development of the country along lines beyond the ability of the railroads to develop it. The new power in transportation is our vast fleet of motor cars and trucks—nearly twelve million of them. They have made hamlets into villages, towns into cities; they have brought buyers to market, markets to the buyer; they have abolished the city man's imprisonment, the country man's isolation; they have annihilated time and distance in the movement of persons and commodities. A great industry is serving this new transportation, supplying the man power and the materials it requires. Building or selling a car or truck or an article of equipment, or performing a maintenance task is serving motor transportation, and serving motor transportation is serving the nation's progress.

The Winter Tractor Canvass

TRACTOR sales during the winter months are few and far between. A few orders may be secured for spring delivery but, on the whole, little actual tractor selling can be done during the winter months. The farmer can't use the tractor until spring and there is little reason why he should invest in one until then. Despite this condition, however, there is plenty for the dealer to do during the winter months.

Spring will bring a larger and more profitable business if the winter months have been devoted to missionary work. Winter canvasses will locate the farmers who are most likely to buy tractors in the spring. They will provide information as to the financial resources of the farmers in the territory. They will do much useful preliminary work that, in the rush of spring work, would be left undone.

Tractor dealers should plan now to canvass their territories intensively this winter. The canvass should get under way not long after the first of the year. Dealers who made canvasses last winter found it so profitable that they are doing it again this winter.

Working in Bad Weather

IT requires a lot of determination, a pair of leak-proof "dogs" and good, warm clothing to venture out of the salesroom on the many cold, wet, slushy, disagreeable days of winter. It's a lot easier and pleasanter to invent an excuse for remaining inside—expecting a prospect—a phone call to rush up and sell somebody a sedan—well, the old line, everybody knows it.

The extent of the demoralizing effect of bad weather on some sales forces, if it could be measured, would amount to many thousands of dollars of lost sales each year. Some dealers and sales managers have recognized this fact and insist that salesmen leave the salesroom on disagreeable days with the same promptness as on fair ones—but this does not solve the problem.

What can be done, and what undoubtedly should be done with sales forces that have developed tendencies to "hug the fireside" in winter, is to SELL them on the actual advantages of working in bad weather—and there are many.

The opportunities for an effective demonstration and sales talk are never better than when the salesman can fit that demonstration and visit into the plans of the prospect or his family by arranging to take one or another of them to the club for lunch or home for dinner, or down town on a shopping tour. Occasionally some salesmen "play a hunch" and call up a prospect on a wet, cold day and suggest that the prospect ride home from the office in a nice, warm dry car. There's no way of finding out how many of these "hunches" are successful, but it is a pretty good wager that the percentage is worth while.

The chances of a prompt audience, an interrupted interview, and thus the opportunity of getting concentrated attention, are usually much better on disagreeable days. The reason is obvious. Many other people besides automobile salesmen invent excuses for staying indoors on disagreeable days and the salesman that does venture out has the prospect pretty much to himself.

The chances of finding people in their homes evenings are vastly better on stormy nights, and often the visit of the salesman, which otherwise might be an interference with plans to visit the "movies" or drop in on neighbors, becomes a welcome and interesting diversion.

"Advantages of Working in Bad Weather" might be made the topic of a very interesting discussion at a sales

Digitized by Google

meeting this month. It would undoubtedly serve to direct attention to a practice that is contributing to the winter "lull" in some sales organizations, and in some cases it will provide inspiration toward better use of much time that otherwise might be wasted this winter.

Motor Cars Keep Out!

A TRAFFIC COURT magistrate has suggested that eventually it may be necessary, because of street congestion, to bar "pleasure vehicles," as he calls them, from Manhattan Island, south of Columbus Circle. This would close the wholesale and retail, theater and financial districts of New York, the very heart of the city, to all but commercial vehicles, which might take in "business" cars as well as trucks.

Only a few days before the traffic judge made his comment the metropolitan police commissioner suggested as a possibility for widening the most congested streets to accommodate additional vehicle traffic that first-floor stores be shoved back, that is, their fronts cut off several feet, and space gained be used for arcaded sidewalks.

The two official pronouncements serve to turn a sharp light on the serious obstacle in the country's greatest city to expansion of the use of motor vehicles and so to growth of motor vehicle sales. It suggests that other large cities and smaller communities in a smaller way undoubtedly have traffic problems that are proving a stumbling block in the way of logical growth of motor transportation.

One cannot help but wonder what might be accomplished in New York, for instance, if a strong, progressive association of automotive merchants could take a hand in such a problem as traffic congestion, even employing an expert, or experts, to advise it, as such an association could well afford to do, and go to the governing officials with recommendations for its solution.

In most communities about all the automotive business men have contributed so far to improvement of traffic and other public problems is to say "Yes, yes," after somebody else has worked out a solution. There are some notable exceptions of course. There ought to be more of them.

Home Made Sales Manual

IN new York City there is a passenger-car salesman who used to be a service station executive. For two or three months he has led the sales staff. That's interesting. It suggests that perhaps the trade ought to look its service stations over a little more carefully for sales material. But there is something even more interesting about this man. He is making up a private sales manual.

This salesman says neither the manufacturer nor dealer in the car he sells has published anything thoroughly comprehensive to aid salesmen in closing retail orders. He says a salesman might carry most of the information he needs in a briefcase filled to fatness with catalogs, sales bulletins and numerous other odds and ends of "literature," but it's like looking for a rowboat in the middle of the Atlantic Ocean to find the right piece of printed matter when certain subjects come up in interviews with prospects.

So this salesman has bought a pocket-size book binder and is making up pages of his own, some original, some clipped from text and illustrated matter in the manufacturer's catalogs and bulletins. When he gets the job done he will have a sales manual, all classified and indexed, that for his purposes at least may be called complete.

Quite an idea, isn't it? Worth something, maybe, to an enterprising dealer or a manufacturer. We can visualize a book like that. Brief, to-the-point facts about the body arrangement, for instance, under "B," and a picture so that the salesman can show the prospect what he is talking about. Loose-leaf book, perhaps, so that it can be kept up to date. Salesman quits lugging around a briefcase. Has all the "dope" in the pocket-size book. An idea? Maybe, for somebody.

Things to Think About

AMONG dealers who make substantial profits in automotive equipment merchandising some pay their employees commissions and others don't. But we've never heard of a dealer allowing his employees accessory commissions who was considering giving up the accessory business. Some allow 2 per cent, some three and a few that we've heard of five. Not so much, out of an average gross discount of thirty-three and a third.

"Passenger cars are sold at list: why not trucks?", somebody in the trade asks. Suppose this fellow never heard of used cars?

Are you one of the "wise guys" selling automotive equipment for Christmas gifts? Sell it a little harder the next two weeks.

"You will never find a dirty rung at the top of the ladder," says John W. Codd in "The Gray Goose," Wills-St. Claire house organ. That puts it right. Some of the half-successful men in the automobile business have dirty salesrooms, dirty offices and dirty shops. The wholly successful fellows swept the dirt out long ago—if they ever had any.

Some distributors and jobbers have recently bought motorcycles with side cars for delivery and collection of light freight, such as pick-up parts orders and so on. The motorcycles can get through traffic faster than trucks, they say, and they can park in places too small for trucks or cars. Sounds reasonable. And if motorcycles are so useful for some men in the automotive trade probably they are just as handy elsewhere. Which suggests that automotive dealers might as well be selling some of them. Motorcycle profits are profits, aren't they?

Health authorities state, on the basis of statistics, that the average expectancy of life in the United States has been increased in the last 40 years from 40 to 55 years. The average child can expect to live to be 55. Much of the increase in expectancy has been brought about in the past few years by more intelligent medical and sanitary work and better living conditions. We feel pretty sure some of it can be attributed to the health-giving recreation provided by the motor car. Something else for the industry to be proud of.

The business that neglects the welfare of its employees cannot complain if its employees are careless about the welfare of the business.

N. A. D. A. Forces Down Insurance Rates

COMPANIES REDUCE THEM 20 PER CENT

Are Still Higher, However, Than Those Paid by Association Members

ST. LOUIS, Dec. 11—After six months of the competition to which casualty insurance companies of the United States have been subjected by the Insurance Service Department of the National Automobile Dealers' Association, the insurance companies have revised the "Manual" rates applying to automobile dealers and garages to a point virtually 20 per cent lower than the existing rates at the time the N. A. D. A. began its struggle for lower rates for the industry.

The rates are still 25 to 30 per cent higher than those available for members of the national association, through their organization.

To show just what has been done in actual figures by the revision of the manual, the rates applying in the cities of New York, St. Louis and Chicago are compared by C. A. Vane, general manager of the N. A. D. A., in a statement commenting upon the association's victory for the principle for which it contended.

Standing of Rates

In St. Louis and Chicago on a public liability policy of $5,000 to $10,000 limits and property damage of $1,000, the rates for automobile dealers were:

	P. L.
For first $10,000 payroll.....	$2.50 per $100
Next $15,000 payroll.....	1.90 per 100
	P. D.
For first $10,000 payroll.....	.95 per $100
Next $10,000 payroll.....	.70 per 100

By this rate a dealer whose payroll was $25,000 a year would be paying $735 for public liability insurance of $5,000 to $10,000 limits with $1,000 property damage. This makes an average rate of $2.94 per $100 of payroll. Since the revision the casualty companies have abolished the division of first $10,000 and next $15,000, and have authorized a flat charge of $2.55 a hundred.

The New York rates have been reduced from an average of $4.40 per $100 of payroll to $4 per $100 of payroll on the basis of a payroll of $25,000 a year. These distinctions and revisions have been made effective throughout the entire United States in about the same degree of reduction.

Vane says:

The automobile industry has been the most ignorantly written insurance business in existence in commercial America to-day and there is a great deal of work still to be done before the business is properly taken care of.

For example one of the grossest injustices to the dealers is in the charges made by the carriers against a dealer's clerical help. A clerk for anyone else is written at about 10 per cent of the rate that is charged to a shop mechanic, but in the automobile dealer's business rates for clerks are just as high as for mechanics.

HENSHAW DISTRIBUTES FREE WOOD TO POOR

BOSTON, Dec. 8—On account of the acute coal shortage situation, arrangements are being made by the Henshaw Motor Co., Dodge Brothers distributors in Boston, with the co-operation of the Boston & Maine Railroad, to have seven carloads of railroad ties, aggregating 1200, hauled in close to Boston Tuesday morning.

Plans are being made to furnish sufficient motor trucks to haul them, distributing the ties gratis among charitable organizations of different denominations.

SURVEY SHOWS LOSS IN USED CAR VALUES

ST. LOUIS, Dec. 11—The National Automobile Dealers Association is now making a survey of the used car situation in Pennsylvania. Of 3100 dealers addressed, complete replies have been received from 252, who reported 2445 used cars on hand Dec. 1, which were acquired at a cost of $1,014,322.

The present actual market value of these cars, the dealers estimate, to be $844,648, or a flat loss of $169,674. It is figured that by the time there is added to this figure the cost of conditioning the cars for resale, the selling cost and the legitimate items of overhead expense, another $160,000 loss will be suffered.

Forty-two dealers reported the actual value of the cars the same as the acquisition cost, 45 reported the acquisition lower than the present actual market value, but 165 dealers reported the acquisition cost higher than the present actual market value.

Nash and Velie Output

CHICAGO, Dec. 9—Nash Motors at Kenosha, Wis., is now running on a schedule of about 170 fours and sixes per day. Velie Motors at Moline is operating on a daily schedule of about 30 cars, production being somewhat restricted because of the scarcity of closed bodies.

GORDON LEE LEAVES GOVERNMENT SERVICE

Becomes Identified with Yellow Coach Manufacturing Co. in Chicago

CHICAGO, Dec. 11—Gordon Lee, has resigned as chief of the Automotive Division of the Bureau of Foreign and Domestic Commerce, to become director of foreign sales for the Yellow Coach Manufacturing Co. of this city. His resignation takes effect Dec. 15.

Lee has been head of the Automotive Division since its inception under the Hoover regimé two years ago. Installed simultaneously with some ten or twelve other commodity divisions, the division has grown constantly in efficiency and scope under Lee's administration. It is now one of the most active and important of the commodity divisions.

Returning to Industry

Lee is making a return to active work in the automotive industry through his new connection. Before becoming chief of the division, he traveled extensively in foreign countries as a representative of Gaston, Williams & Wigmore. His active merchandising work in the domestic field includes several years' work with Northway Motors in the State of New York, where he gained considerable reputation as a missionary for the Fordson tractor.

Lee is the third important executive from the industry to go to the John Hertz interests during recent months, J. A. Ritchie and George A. Green having been brought to Chicago from the Fifth Avenue Coach Co. of New York some weeks ago, as executives in the corporation which will build and operate taxicabs and motor buses on an extensive scale.

A successor to Lee has not yet been selected.

FIELDS WILL DIRECT SALES FOR CHALMERS

DETROIT, Dec. 12—J. E. Fields has been named director of sales for Chalmers cars. He has resigned as sales manager of Liberty Motor Car Co., which company he joined after a period of service as sales executive at Hupp.

Fields' earliest connection with the industry was as a Chalmers distributor at Fargo, N. D., taking his contract at the time Hugh Chalmers took over the former Thomas-Detroit. He is now assuming the sales management of the company which he first joined as distributor.

Ohio Meeting Favors Repeal of War Taxes

OTHER LEGISLATIVE MEASURES DISCUSSED

Charles Rattermann Chosen President—Shover Is Re-elected Manager

TOLEDO, Dec. 8—Three hundred and fifty delegates from all parts of Ohio attending the sixth annual convention of the Ohio Automotive Trades Association went on record as favoring the repeal of excise war taxes on automotive products. They also indorsed legislation penalizing the defrauding of battery dealers through the retention of rented batteries and indorsed the general legislative program of the association calling for the equalization of taxes, and making traffic laws uniform and the strengthening of the anti-theft law.

The entire plan of the convention sought to show the complete harmony prevailing throughout the industry. The objects covered in the discussions concerned truck service and sales, garage operation, batteries and electric stations, tire merchandising, passenger car sales and service, shop records and accounting and the handling of used cars.

Bright Future, Says Peake

"The automotive industry to-day has just as bright a future as it ever had," declared E. E. Peake of Kansas City, "and the fundamental reason why the much talked about saturation point will not be reached for some time to come, if ever, is that the automobile is ever increasing its field of usefulness."

Harvey Wilson of New York told of the manufacture of tires and the problems of merchandising, and urged all automotive men to "give the other man the benefit of the doubt."

Speaking on "The Dealer and 1923" George M. Graham, vice-president of the Chandler Motor Car Co., declared that after covering 41 States and visiting hundreds of automotive dealers, he found them in a more prosperous condition than many other merchants and individuals in other lines of trade.

Speaking of conditions, he said:

Business in 1922 went forward in a big way despite price-cutting and many other ordinary discouragements. The time will not come for ten years at least when the market will have enough cars produced to satisfy it. During the last year $3,500,000,000 of automotive products were produced and workmen were paid more than $350,000,000.

That means that we are in a stable business.

The automobile to-day is a form of real estate insurance. It has made suburban and farm property worth more than it was in the pre-automobile days. As the suburban property increases in value so does the market for automobiles.

N. A. C. C. AT DINNER TO HEAR WILL ROGERS

NEW YORK, Dec. 9—Will Rogers is going into the automobile business for one night. He will be one of the two speakers at the annual dinner of the National Automobile Chamber of Commerce, to be held in the Hotel Commodore Jan. 9.

This expert lariat thrower and humorist will talk on the subject, "What I Think About Automobiles."

Graham outlined several plans of disposing of used cars.

Trustees elected for the ensuing year were James Henderson, Youngstown; T. R. Dahl, Cleveland; J. R. Burgamy, Cincinnati; C. A. Dunham, Cleveland; F. K. Boggs, Dayton, and F. E. McClure, Akron.

Charles Rattermann of the Rattermann Motor Sales & Service Co., Cincinnati, was elected president for the coming year; Charles E. Doan, Toledo, first vice-president, and O. L. DeWeese, Lima, second vice-president.

The new president called attention to the big work before the association, especially in dispelling the "legislative clouds hanging over the industry."

E. J. Shover was re-elected secretary-manager.

Delegates were entertained at the Champion Spark Plug Co. Friday noon and at the Willys-Overland plant in the afternoon. John M. Willys addressed the gathering.

PELLETIER PROMOTES RICKENBACKER SALES

DETROIT, Dec. 11—E. LeRoy Pelletier has become advertising manager in charge of sales promotion of the Rickenbacker Motor Co. Pelletier will relieve E. V. Rickenbacker of much detail in connection with sales promotion, which he has directed from the beginning of the organization, and will enable Rickenbacker to devote more of his time to the engineering, manufacturing and general administration of the business.

In turn, Rickenbacker will be more closely association with President and General Manager B. F. Everitt, assisting in the production of cars in the rapidly expanding organization. Rickenbacker and Pelletier now are visiting dealers in the Northwest.

Ford's Glass Plant at Rouge

DETROIT, Dec. 12—The glass manufacturing plant of the Ford Motor Co. will be located at River Rouge.

"WE LIVE IN MOTOR AGE," SAYS HARDING

But He Declares That Trucks Should Pay Bigger Share of Highway Burden

WASHINGTON, Dec. 11—Recognition of the important part the motor vehicle plays in the life of the nation was given by President Harding in his address to Congress last week, when he said:

"Manifestly, we have need to begin on plans to coordinate all transportation facilities. We should more effectively connect up our rail lines with our carriers by sea. We ought to reap some benefit from the hundreds of millions expended on inland waterways, proving our capacity to utilize as well as expend. We ought to turn the motor trucks into a railway feeder and distributor instead of a destroying competitor.

"It would be folly to ignore that we iive in a motor age. The motor car reflects our standard of living and gages the speed of our present-day life.

Gives Motor Car Recognition

"With full recognition of motor car transportation, we must turn it to the most practical use. It cannot supersede the railway lines, no matter how generously we afford it highways out of the public treasury. If freight traffic by motor were charged with its proper and proportionate share of highway construction, we should find much of it wasteful and more costly than like service by rail. Yet we have paralleled the railways, a most natural line of construction, and thereby taken away from the agency of expected service much of its profitable traffic, for which the taxpayers have been providing the highways, whose cost of maintenance is not yet realized.

"The Federal Government has a right to inquire into the wisdom of this policy, bacause the National Treasury is contributing largely to this highway construction. Costly highways ought to be made to serve as feeders rather than competitors of the railroads, and the motor truck should become a coordinate factor in our great distributing system."

No Stutz-Studebaker Merger

NEW YORK, Dec. 11—A rumor, published by a New York daily newspaper, that a merger of Studebaker and Stutz was in contemplation, is denied positively by both President A. R. Erskine of the Studebaker Corp. and President W. N. Thompson of the Stutz Motor Car Corp. of America.

Digitized by Google

HANDLEY REORGANIZED UNDER CHANGED NAME

"Knight" Is Dropped and "Motors" Substituted—No Change in Presidency

KALAMAZOO, MICH., Dec. 11 — Handley Motors, Inc., has been organized and has taken over all the assets, including cash on hand, inventories, receivables and plant of the Handley-Knight Co.

The incorporators of the new company are: James I. Handley, W. E. Upjohn, Charles A. Blaney, C. S. Campbell, W. H. Conklin, R. J. Fitness and C. V. Kean, Jr.

Directors named for the time being are Handley, Blaney, Conklin, Fitness and Kean. Handley is president and treasurer, and Blaney, vice-president and secretary temporarily. This is announced as a tentative organization only and in order to get the new corporation into operative form. A permanent board of directors and officers will be regularly elected later on.

Future plans of Handley Motors, Inc., provide for the manufacture of the same Handley-Knight de luxe chassis, with a 6-cylinder engine, instead of the 4-cylinder heretofore used, and a smaller 6-cylinder car now being developed. The development of the new smaller car is pretty well along, and it will be ready to show, in connection with the larger car, at the national automobile shows, in New York and Chicago.

It is the opinion of Handley that the new company, not being committed to any of the old high priced material contracts, will be in position to take advantage of present market levels right from the start and, therefore, expects to be able to market the large car at about $1,000 less than the former price The smaller new six is expected to sell in the $1,250 price field.

LAW'S HAND HEAVIER ON RECKLESS DRIVERS

NEW YORK, Dec. 11—Evidence is at hand to show that law enforcement officials throughout the country are making determined efforts to reduce the number of automobile accidents by compelling motorists to drive carefully.

A judge in Detroit made the lesson sink home by forcing drivers who had caused accidents to visit one of the hospitals and look at children who had been maimed by automobiles.

Mayor Shank of Indianapolis has ordered that hereafter all motorists arrested for violating the speed ordinances shall be taken to jail in patrol wagons and each compelled to give a $5,000 bond.

Los Angeles is compelling respect for the law by sending motorists to jail for 10 days. One of the most prominent of those to suffer such imprisonment is Ralph De Palma, who is serving a 10-day sentence for speeding. The judge permitted De Palma to drive in the Los Angeles race before going to jail.

Republic Truck Condition

ALMA, MICH., Dec. 13—According to the Security Trust Co. of this city, receiver for the Republic Motor Truck Co., that concern showed assets of $6,289,930 and liabilities of $5,181,862 on Sept. 28.

Lorraine in Bankruptcy

DETROIT, Dec. 12—Lorraine Motors Co. has filed a voluntary petition in bankruptcy showing assets of $91,038 against debts of $82,322. The debts are practically all unsecured claims with about $5,000 due on taxes.

PAIGE HAS SCHEDULE FOR 65,000 IN 1923

Of These 50,000 Will Be Jewetts —Program Is 100 Per Cent Over This Year

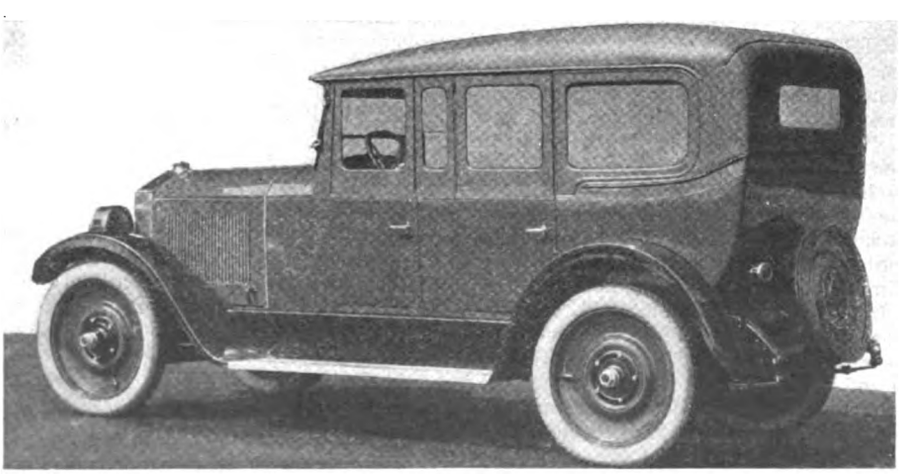
DETROIT, Dec. 12 — Paige-Detroit Motor Car Co. and Jewett Motors has scheduled 50,000 Jewetts and 15,000 Paiges as its production in 1923, about 40 per cent of which are expected to be closed cars. This new total will be about 100 per cent more than 1922 production.

Production this year, it is declared, will double the best previous year the company has had.

To provide for increased manufacturing the former plant of the Hinkley Motor Co. has been taken over and will be devoted exclusively to Paige assembly. Formerly both Paige and Jewett models were assembled in plant No. 1. This building in the future will be devoted to Jewett only. Under the new plan the company will specialize two entirely separate groups of employees on the two models.

With the addition of the Hinkley building, the company will have seven plants in the southern section of Detroit. The two main plants, in addition to those above, are for the manufacture of the Jewett engines and include the paint and trim buildings.

AUBURN ANNOUNCES DETAILS OF NEW CAR



AUBURN, IND., Dec. 8—More complete details of the new Auburn six have been announced by the Auburn Automobile Co. The Continental 6-Y engine will be used, and the clutch will be Borg & Beck. The gearset will be a Warner three-speed type. Remy starting, lighting and ignition will be regular equipment. The side members of the frame will be 6 in. channels of heavy gage metal. There will be four cross members heavily gusseted with tubular members at each end of the frame.

The new car will be produced in two body styles, a five-passenger phaeton and a five-passenger two-door sedan type which will be known as a brougham. The phaeton will have a permanent top as optional equipment. The brougham will have metal body and panels, a soft top, twin front seats and 32 in. doors.

Duplex to Increase Capital

DETROIT, Dec. 11—Stockholders of the Duplex Truck Co. will vote at the annual meeting, Dec. 12, on a proposal to enlarge the board of directors and also to increase the capitalization from 100,000 to 125,000 shares with a par value of $10, if the changes are agreed to. The company intimates that it will extend its sales and manufacturing fields and that changes in managements will be made.

Moon Model 6-40 Tourlux $1445

This is a new Moon phaeton with California top. Both the top and side structure are covered with artificial leather and the beadings where used conform to the curve of the body. The rear window is made quite large and the upper sashes open with the doors. The space between the front and rear doors is glass filled to eliminate the blind spots

REO ASSETS GAINED; LIABILITIES FELL OFF

Net Profits for Year Ended Aug. 31 Were $3,140,529, President Olds Says

DETROIT, Dec. 13—Total assets of the Reo Motor Car Co. are $16,238,864 and current liabilities are $2,783,025, according to the financial statement as of Aug. 31. The assets have grown $4,000,000 over 1921 and liabilities have decreased. Net profits for the fiscal year were $3,140,529, President R. E. Olds says. In his statement to stockholders, Olds states:

Amounts due the company on notes and open accounts show a substantial reduction over the previous year. This is gratifying in view of our increasing volume of business and tends to show the gradual recovery which is taking place in the business world.

Inventories of raw materials and finished products at the plant and in stock at branches are priced on a conservative basis. These show a slight increase over the last annual report. Extensions to buildings and plant equipment have been made as required without the issue of bonds or preferred stock.

New types of open and closed cars have been added and these have had an unprecedented reception which augurs well for the future plans of the company. The Reo selling organization is continuously increasing its list of distributors and dealers and expanding its territorial lines. In entering upon our nineteenth year there is every indication of a successful and increased business.

Current Assets and Liabilities

The current assets of the company show $5,886,880 cash, bills receivable $2,335,560, and inventories of $7,174,603 as principal items. In the current liabilities, the principal items are accounts payable of $1,734,708 and reserve for taxes of $915,590. During the year in addition to cash dividends, $6,937,250 was transferred from surplus account to permanent investment in the form of a 100 per cent stock dividend. The present surplus of $5,719,913 as compared to $9,785,666 last year. The present book value of the common stock is $14.12.

In connection with the annual report it is noted that the directorate of Reo, comprised exclusively of its officers, has not changed in its 18 years of organization. These are R. E. Olds, president; R. H. Scott, vice-president and general manager; H. T. Thomas, vice-president and chief engineer; D. E. Bates, secretary and treasurer; R. C. Rueschaw, sales manager; George E. Smith, purchasing manager, and Harry C. Teel, factory superintendent.

Wills' Inventory Being Taken

DETROIT, Dec. 9—Work of appraising the plant and properties of the C. H. Wills & Co. will be started next week and will be completed, if possible, by Dec. 20. Manufacturing operations at the plant have been discontinued for the present, except the work of completing cars in process of manufacture. It is the intention of the receiver to begin major operations again at the first of the year.

Cars now on hand and in process of construction will be ample to meet sales requirements for the present, the receiver says. It is hoped to bring the receivership to a speedy termination, and a sale will be held soon after the first of the year. In the meantime the business will be operated on a sales basis, and all orders from dealers will be filled without delay.

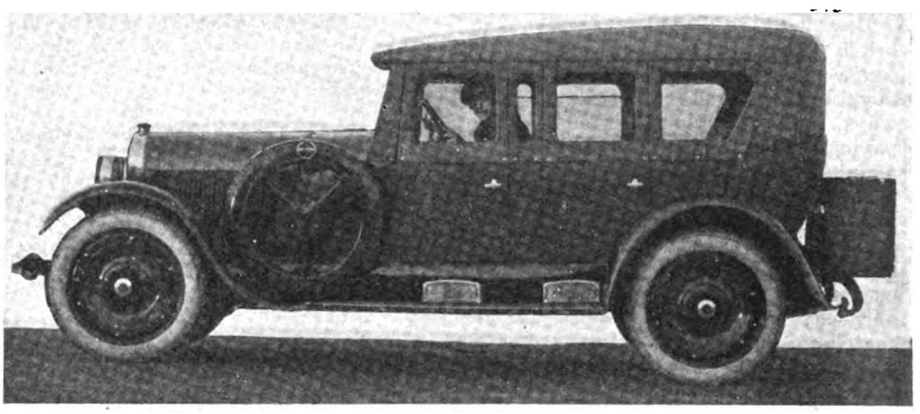
DISTRIBUTORS SHOWN NEW RUGGLES TRUCK

DETROIT, Dec. 11—Ruggles Motor Truck Co. showed at its distributor convention a new ¾-ton model on which it soon will be in production. The price has not been definitely set, but it is announced that it will be low, and that the model is designed to meet the requirements of light delivery business. A total of 1420 of the model was ordered.

With the new truck, the company will have three models in production, the others being the 1- and 1¼-ton and the 2- and 2½-ton. On the first two models, the company manufactured 906 in its Saginaw plant during the year past, and 306 at its Canadian plant.

JORDAN IS ASSURED CAPACITY TO AUGUST

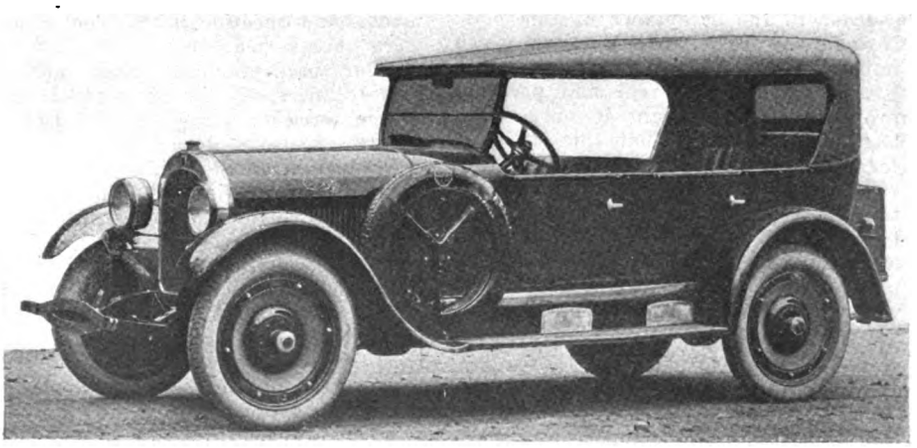
Total of 4350 Cars Ordered at Distributor Convention in Cleveland



CLEVELAND, Dec. 7—Four hundred distributors of the Jordan Motor Car Co., in convention at the Winton Hotel, placed orders for 4350 Jordan cars at a total valuation of $10,800,000 for delivery during December, January, February and March.

Every section of the United States was represented, and from every distributor came reports of greater business with strong emphasis on the increased demand for closed cars.

Jordan will build approximately 9000 cars in 1922. The demand for closed cars has brought the requirements of dealers far beyond the plant capacity.



This means that Jordan production will run for the next four months at the rate of not less than 1000 cars a month, it was said, and means further that with this production maintained to April 1, with the normal spring demand coming after the first of April, the factory will be operated at capacity through to July.

Westcott Car Newly Fitted with Winter Inclosure, $1890

This is the type of permanent tops now being fitted to the Westcott. The two windows on either side can be raised or lowered like the windows in a closed car

Westcott B-44 Special Phaeton, $1690

This is a sport type car fitted with disk wheels, bumper, two spare tires carried on the runningboards, permanent top and a two case touring trunk as standard equipment

NEW JERSEY LAUNCHES ROAD FINANCING PLAN

All Taxpayers Will Build Highways and Motorists Will Maintain Them

NEWARK, N. J., Dec. 11—That the "New Jersey Plan" is likely to become basic in highway financing in a majority of States was brought out at the dinner given at the Robert Treat Hotel by the Good Roads Association of New Jersey in celebration of the endorsement at the last general election of the $40,000,000 good roads bond issue, designed to finance the completion of the State highway system within the next five years.

This claim for national recognition of the importance of the plan was accentuated by the presence of Alfred Reeves, general manager of the National Automobile Chamber of Commerce, as the principal speaker of the evening. Reeves made it plain to his audience that the rest of the country is greatly interested in what promises to be a model law for use in other States.

Reeves Approves Plan

"The plan is beyond question the soundest and most suitable method of raising the money necessary to build and maintain modern improved highways that I know off," declared Reeves.

Describing the "New Jersey Plan" briefly, it may be said that it calls on all taxpayers to make the capital investment to build and reconstruct the highways, and after that the motorists, by paying special registration fees, will maintain them.

New Jersey is the first State to attempt anything of the sort, it being the common practice in other States which have issued bonds to pay for road improvements to make the motorists not only pay for the maintenance but also contribute largely to building and rebuilding them. Therefore, under the new law, the $40,000,000 necessary to complete New Jersey's 730-mile State road system will come from general taxation. After this has been done, the motorists' fees will maintain the highways.

Worked Under Old System

Prior to the acceptance of this plan, New Jersey worked under a system which imposed a one mill tax on each dollar of State valuations of real and personal property. This brought in only about $3,000,000 a year. That this was not feasible is shown by the fact that in 1922 alone it cost $2,250,000 to maintain the roads, let alone build any. It is figured that under the new plan this maintenance can be handled at an expense of only $500,000, and, further, the whole system will be completed within five years.

Continuing his remarks on the New Jersey Plan, Reeves said:

This policy of yours makes possible the logical and legitimate development to which motor vehicle transportation is entitled. You have very wisely divided your highway financing activities into their two broad general phases—highway construction and highway maintenance.

Then, on the theory that highway improvement is of supreme importance to society as a whole, you levy general taxation upon all classes of property to provide the money necessary to make the capital investment in the construction and reconstruction of modern improved roads and bridges; after the highways have been built, on the theory that the motor vehicle not only receives a particular and peculiar benefit from them, but also is responsible for the wear and tear and ultimate destruction of their surfaces, you place the cost of maintenance upon motor vehicle owners.

On the other hand, the policy which aims to impose upon motor-vehicle use not only the cost of maintaining improved highways but also that of constructing and reconstructing them has a tendency to stifle and discourage the use of the most efficient means of transportation that man ever has known.

TOWN FOR NEW PLANT GIVEN DETROIT NAME

WINCHESTER, VA., Dec. 11—Mystery continues to envelop the principals in the reported deal to construct a $10,000,000 automobile plant at Ridgeway, nine miles from here.

A contract has been let for laying out the town site, consisting of 2500 acres, which will be the home of the workmen in the big plant. About the only development that has been given to the public is that the name of the town is to be changed from Ridgeway to Detroit, W. Va.

Denial is made that the whole affair is a scheme to sell land and Luttrell declares that those interested in the deal have nothing to offer for sale in the way of stock, bonds or lots.

DURANT OF MICHIGAN CHANGES ITS POLICY

DETROIT, Dec. 12—Field representatives of the Durant and Star car, products of the Lansing plant of Durant Motor Co. of Michigan, were notified of changes of distribution policy of the two models at a meeting here. The changes were occasioned principally by the greater production of Star and the largely increased dealer representation in the territory served by the Lansing plant.

Production on Stars has now been increased to approximately 175 daily and will reach 300 soon after the first of the year. A schedule of 90,000 for 1923 has been set, and this will be supplemented by 96,000 to be built at the Flint plant now under construction. Shipments to the Pacific Coast have been discontinued with the completion of the Oakland plant.

Deliveries of closed bodies, which have handicapped production up to this time, now have reached proportions required by sales and within two weeks the company expects to be on an even basis.

STUDEBAKER STOCK DIVIDEND ORDERED

Directors Act—Business for Three Quarters of Year Reached $108,488,756

NEW YORK, Dec. 12—A special meeting of directors of the Studebaker Corp. ordered a stock dividend of 25 per cent to common stockholders, payable on Dec. 29 to holders of record as of Dec. 16. No action by stockholders is necessary, as the corporation has authorized common capital of $75,000,000, of which only $60,000,000 is outstanding.

The directors said: "The earnings of the corporation and its prospects are such that the management believes the present rate of 10 per cent dividends on the common stock will be continued on the new capitalization."

The directors also voted to transfer $15,000,000 of the company's accumulated earnings which have been permanently invested in plants, equipment, inventories, etc., from surplus to capital account to provide for the continually expanding business of the corporation. Certificates for the 150,000 shares of new common stock created by the distribution will be ready Dec. 29.

This is the second stock dividend paid by Studebaker. The first one of 33⅓ per cent was paid May 5, 1920, when the capital was increased from $45,000,000 to $60,000,000 by the transfer of $15,000,000 from surplus to capital.

Reporting on the business for the first nine months of 1922, President A. R. Erskine states that net sales reached $108,488,756 against $80,593,998 a year ago, and that net profits totaled $15,640,374 compared with $9,644,326 in the same period last year. After provision for common and preferred dividends, there was carried to surplus $10,631,999 against $5,979,826 in 1921. Profit and loss surplus on Sept. 30 last aggregated approximately $24,861,743, as compared with $14,229,744 on Dec. 31, 1921.

KENTUCKY LOAD LAW REGULATES TIRE USE

LOUISVILLE, KY., Dec. 11—The load limit law, enacted by the 1922 General Assembly, goes into effect Dec. 15 and continues until April 1, limiting vehicles with steel tires less than three inches wide to 5000 pounds, and 6500 pounds if the tires are three to four inches wide, 6800 pounds if the tires are four to five inches wide and 7000 pounds if the tires are over five inches wide. For rubber tires less than three inches wide, the limit is 5500 pounds, up to four inches, 6500 pounds; up to five inches, 7500 pounds, and five inches or more, 10,000 pounds.

On brick, concrete, rock asphalt or surface-treated macadam, bituminous concrete, penetration asphalt and penetration tar roads, the load may be increased 50 per cent.

NASH PREDICTS RISE IN PRICES OF CARS

Says Cost of Materials May Force It—Sees Business Good in 1923

MILWAUKEE, Dec. 8—The opinion that motor car prices probably will witness an increase before next spring was voiced by Charles W. Nash, president of the Nash Motors Co. and the LaFayette Motors Corp., in an address before the annual sales conference of Nash and LaFayette distributors and dealers in the Wisconsin and Upper Michigan territory in Milwaukee yesterday.

Nash said that frequently in recent weeks he has been asked by dealers and others what he thought of the outlook with reference to prices. In reply, he said, he has been able to say only that, so far as his companies are concerned, they are unable to guarantee dealers against a price increase between now and spring.

Raw materials and other elements entering into the manufacture of motor vehicles appear, from present indications, to warrant an increase in prices, Nash said. Whether or not this course will be found necessary he said he was not prepared to say positively.

Conditions Have Improved

The automotive industries are due for the greatest leap forward in all the history of the business during the first six months of 1923, Nash declared. Conditions in the agricultural communities have improved so much, he said, that already a bigger and broader market has opened which doubtless will be responsive to broad development after the winter season is over. This is business of a better character than city business, for the city buyer as a rule is merely making a replacement, while the farmer generally is a new customer.

While counting largely for the increased sales next year over the remarkable volume of 1922, Nash said that urban business is bound to be good, for a great many people are still holding off buying cars because of insecurity of positions or for any number of other reasons, and talk of the point of saturation being reached is not substantially based.

HAYNES NEW LISTS SHOW LOWER PRICES

KOKOMO, IND., Dec. 11—A new price list, effective as of Dec. 6, has been announced by the Haynes Automobile Co. which shows reductions of $100 on the 1923 Model phaeton and sport phaeton and of from $180 to $255 on the 77 models. The revised 1923 list is as follows:

Model 77—Standard models, 7-passenger phaeton, $2,395; Blue Ribbon speedster, 2-passenger, $2,395; 5-passenger brougham, $3,095; 7-passenger sedan, $3,395; 7-passenger suburban, $3,395.

Model 77—Sport types, 7-passenger phaeton, $2,550; 4-passenger tourister, $2,550; 5-passenger brougham, $3,250.

Model 55—Standard models, 5-passenger phaeton, $1,595; 5-passenger sedan, $2,595.

Model 55—Sport types, 5-passenger phaeton, $1,850; 2-passenger roadster, $1,895; 5-passenger sedan, $2,695; 5-passenger brougham, $2,395.

Goodrich Tubes Increased

AKRON, Dec. 7—The B. F. Goodrich Rubber Co. announces a 15 per cent increase in the price of its Silvertown tubes; 10 per cent, small size gray tubes, and 5 per cent in the price of its large size gray tubes. Tire prices remain unchanged.

Fisk Lists Higher

NEW YORK, Dec. 11—Indicative of the expected general increase in tire prices, the Fisk Rubber Co. to-day announced an advance of from 10 to 12 per cent on its entire line of casings, effective to-morrow.

SERVICE HELP URGED AT S. A. E. MEETING

SPRINGFIELD, MASS., Dec. 12—At a meeting of the New England section of the Society of Automotive Engineers, M. B. Speer, service manager for the Westinghouse Electric & Manufacturing Co., appealed to the engineers to exert an influence for the more efficient conduct of service stations. This can be done in part, he said, by improved equipment employed in outfitting such station and the rewinding of armatures, was cited as one of the things in which improvement was needed in many cases.

The call is for accurate accounting methods and honest service, he added, and he advocated the adoption of a flat rate for a given job as tending to obtain justice for the customer. He advised that the engineers work through the dealers and maintenance concerns, as well as the manufacturers, for the furtherance of better business in service.

Jarrard Goes to Lansing

NEW YORK, Dec. 11—T. Earl Jarrard, assistant sales manager to M. B. Leahy, general sales manager of the Durant Motor Co., is leaving his Long Island City post to become sales manager of the Durant Motor Co. of Michigan, with headquarters at Lansing. J. W. Hawk, whom he succeeds at Lansing, will assume Jarrard's former position at Long Island City headquarters.

Hydro Stockholders Discuss Plans

POTTSTOWN, PA., Dec. 11—Representing 40,000 of the 52,000 shares, more than 200 stockholders of the Hydro United Tire Co., which is in the hands of receivers, met here to discuss plans to save the company. Two plans were submitted to obtain funds to meet all the expenses of the company, but no definite action was taken.

LISTS OF KALAMAZOO $155 TO $300 HIGHER

Advance in Cost of Material Assigned as Reason for Increased Prices

KALAMAZOO, MICH., Dec. 8—An increase in prices on four truck models is announced by H. A. Crawford, president of the Kalamazoo Motors Corp., builder of the "Kalamazoo" truck. These advances, which are effective Jan. 1, 1923, range from $155 to $300.

The revised list of prices is as follows:

	Old Price	New Price
1½—2-ton	$1,800	$2,100
3-ton	3,145	3,350
4-ton	3,845	4,000
5-ton	4,345	4,500

In addition, this concern makes a 1-ton speed truck and tractor-trailer units in four, eight and 15-ton sizes and an 18-passenger coach.

"Materials have advanced," said Crawford. "To maintain the Kalamazoo quality, we are forced to raise our prices about 5 per cent on the various heavy models. That is not in relative proportion to the increase in the parts we use."

An interesting order now going through the plant is 12 truck-trailer units for the Noble Hoop Co. of Fort Wayne, Ind. Each unit consists of a 3-ton truck and a 5-ton trailer, both being under perfect control by an automatic air brake system, Westinghouse type. The truck has a heavy duty hoist and windlass, while the standard Wisconsin 4¼ by 6 engine is regular equipment. This develops 50 hp. at 1600 r.p.m. The truck has a wheelbase of 186 inches.

The order for the Noble company is finished in a rich, brilliant red, with gilt lettering.

HUDSON AND ESSEX AGAIN CUT PRICES

DETROIT, Dec. 11—For the third time this year Hudson and Essex prices have been reduced, the latest cut coming to-day when the company announced a new list, cropping $200 off the Hudson sedan and $100 off the coach and two phaetons. Only one Essex reduction was made, $100 being taken off the coach.

Hudson started the year with the seven-passenger Hudson listing at $1,745, July 1 this was cut to $1,695, and on Sept. 22 to $1,575. Now it is $1,475. The Essex coach listed at $1,345, $1,295 and $1,245 on these dates, and now is $1,145.

The revised list as of Dec. 11 is as follows:

	Old Price	New Price
HUDSON		
4-pass. Phaeton	$1,525	$1,425
7-pass Phaeton	1,575	1,475
Coach	1,625	1.525
Sedan	2,295	2,095
ESSEX		
Coach	$1,245	$1,145

SOUTH AFRICA ACTS ON GASOLINE PRICES

Felt There That High Fuel Cost Is Retarding Use of Motor Transport

JOHANNESBURG, SOUTH AFRICA, Oct. 20 (*by mail*)—The chief daily newspapers here, the *Rand Daily Mail* and the *Sunday Times*, are conducting a campaign against the high prices of gasoline and oil, and are receiving considerable support from automobile dealers.

The oil companies up to the present have maintained a dignified silence, with the exception of one or two informal interviews at which it was stated that the price of gasoline could not very well be reduced, as the business did not warrant it.

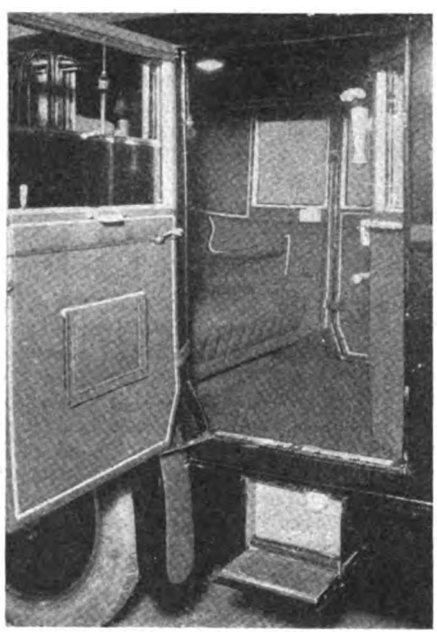
The oil dealers throughout South Africa are very much concerned about the present price of fuel and consider that it is keeping back the use of motor transport. Tires have been brought down to practically pre-war prices, and the operation of a car or motor truck would be almost as economical as in England were gasoline and oil prices to be lowered.

Dollar Gasoline Quoted

At present the motorist pays about $1 a gallon in South Africa, a figure that will make the American manufacturer realize why the proportion of cars to the white population is only about one in fifty. Endeavors are being made here to get the government to appoint a commission to inquire into the possibilities of the production of alcohol fuel on a large scale.

At present there are two or three private concerns manufacturing alcohol fuels, and these fuels are being marketed at a price not very much below that of gasoline. One factory announces its intention of putting a fuel on the market at about 75 cents a gallon retail. If this can be done, and ample supplies maintained, then it will undoubtedly be largely used. But it is felt that some form of state-aided production is necessary in order to develop a large alcohol fuel industry in South Africa.

D. H. Saker & Co., agent for Durant, Reo, Renault and Talbot in South Africa, announces that the first models of Durant are likely to arrive in Cape Town about January or February.



Bus Chassis on Way

Further White bus chassis are now on their way to Johannesburg for the inter-town services that are to be operated by a company recently formed. The first route will be between Johannesburg, the Union's largest and chief town, and Pretoria, the capital, 36 miles away. The train track to Pretoria is 45 miles, and an hour and a quarter is taken for the trip, including two stops. The buses will be operated on an hour and a half schedule, and show an advantage because they take the passengers into the center of each city. It is anticipated that bus services along the Reef—connecting up all the gold mining towns and suburbs around Johannesburg—will follow the initiation of the Johannesburg-Pretoria one.

A large number of Reo speed-wagons with passenger bus bodies are now running in the larger towns in South Africa, although heavier type vehicles have recently been purchased. All the body-building is being done locally, and a regular industry is developing.

CALIFORNIA BUSINESS ON STEADY UP-GRADE

OAKLAND, CAL., Dec. 9—The automobile business in California is in better condition than it has been for several months and trade throughout the State is improving steadily, according to Robert W. Martland, secretary-manager of the California Automobile Trade Association, who has returned from a tour of the State in the interests of the association.

Martland says:

California is enjoying better business health, automotively speaking, right now than for several months, and everything everywhere in the automobile business in this state is on the upgrade and going strong. The Los Angeles automobile show has had a great stimulating effect on trade there, and closed car display weeks in Oakland and San Francisco helped business and made the demand more active throughout this end of the state. The demand for closed cars is one of the outstanding features of the year; more have been sold this year than ever before, and more will be sold next year than this.

BUYERS ORDER CARS AS CHRISTMAS GIFTS

Dealers in Chicago Sell Open Cars By Making Use of Winter Enclosures

CHICAGO, Dec. 9—Although retail sales of automobiles have declined steadily in Chicago and Cook County for the last three months, the rate of decline has been so gradual that business is still maintained at a level which dealers generally consider satisfactory for this season of the year. Public interest in automobiles is high and dealers whose sales have shrunk considerably have no lack of prospective buyers, many of whom are waiting until after the first of the year.

A good many buyers have placed orders for Christmas delivery. This is especially true in the higher price field with closed cars predominating in this business. There are dealers who are unable to get enough closed cars to fill their orders. The new sport models continue in high favor despite the winter.

Distributor Patents Design

Some enterprising dealers are creating a profitable market for new and used open cars by equipping them with winter enclosures. One Chicago distributor of a popular line of cars has patented his own design of winter enclosure, the sides of which are constructed with rattle-proof metal frames and a maximum of glass, with well-fitted doors and windows that open easily for ventilation. This equipment may be installed with the ordinary soft collapsible top or with a special permanent soft top. It has met with great favor, and the company maintains its own shop in which it manufactures between 40 and 50 of these outfits each week.

There are indications that January business will open well. Some dealers report a considerable number of orders placed for January delivery.

The present trend of buying is fairly well indicated by figures furnished by the Central Automobile Financing Association which keeps a record of all time-payment sales for which official documents are recorded. These sales are estimated to represent between 65 and 75 per cent of all retail sales in Chicago and Cook County.

2240 Sold in Week

For the four weeks ending Dec. 2 the number of such sales was 2240, or an average of 558 a week. For the four weeks ending Nov. 4 the number of 2691, or an average of 672 a week. For the four weeks ending Oct. 7 the number was 3060, or an average of 765 a week. This shows the tapering off in demand, although the decline in these figures probably was somewhat greater than the actual decline in sales because of the fact that since the $50 Ford reduction in October a greater proportion of Ford sales have been for cash.

DUNLOP TO OPERATE BUFFALO PLANT NOW

Factory Was Completed Two Years Ago but Has Never Been in Production

NEW YORK, Dec. 11—Reorganization of the Dunlop Tire & Rubber Corp. of America has been completed, following a month's meeting in New York of the directors of the English company. The plant at Buffalo, with a capacity of 13,000 tires a day, will be put into operation at once, giving employment to from 8000 to 10,000 men. This factory, which was completed two years ago, never has been in operation, activities having been suspended after its completion because of financial conditions.

The English directors are financing the new deal by selling an issue of $15,896,000 first mortgage 7 per cent bonds to a syndicate of New York bankers, and this sum will be spent for expansion of factories and sales agencies in the United States.

Following the completion of the refinancing plans, Sir Eric Geddes, brother of the British ambassador at Washington, was made chairman of the board, with Frederick W. Allen of Lee, Higginson & Co. representing the banking interests on the board. Other directors are: Pierre du Pont, J. J. Storrow, Sir J. George Beharrell, Robert K. Pomeroy, Louis Bergen and Charles A. Proctor. Directors of the English company are Frederic C. Walcott and J. Westren, general manager.

PACKARD CONFERENCE HELD IN SOUTHEAST

ATLANTA, Dec. 11—Eighteen Packard distributors from the southeastern States have held a district sales convention here, the first meeting of its kind the Packard company has yet held in the southeastern field.

R. E. Chamberlain, general sales manager of the Packard Motor Car Co., conducted the conference, which was devoted largely to a discussion of plans for the coming year in this territory. Other Packard factory men present were H. N. Davock, technical service manager, and Charles D. Ten Eyck, district manager of the factory. J. H. Sommers, general manager of Packard Enterprises of Georgia, Inc., acted as host to the visiting distributors.

Northwestern Packard Dealers Meet

MINNEAPOLIS, Dec. 11—Northwestern Packard dealers at a general meeting in the Hotel Saint Paul were visited by the following factory men: H. N. Davock, technical service department manager; J. W. Loranger, district representative, and R. E. Chamberlain, general sales manager. Among the dealers present were C. P. Joy, St. Paul; C. G. Embleton, Chicago; R. B. Mann, St. Louis; W. C. Nissen, Aberdeen, S. D.; L. Mansfield, Fort Dodge, Iowa; R. W. Holmes, Winnipeg; W. H. Hathorn, Mason City, Iowa; Knapp Brown, Sioux Falls, S. D.; R. B. Loubek, Bismarck, N. D.; C. S. Richardson, Omaha; C. D. Brandies, Hastings, Neb., and R. G. Wright, Des Moines.

PACKARD INCREASES NUMBER OF DEALERS

DETROIT, Dec. 11—Packard Motor Car Co. has increased its dealer organization 220 per cent in the United States and Canada during the year, giving the company representation in practically every important city. There also has been an increase of 48 per cent in distributors. Part of the increase, it is declared, is due to the discontinuance of branches by both the company and some distributors.

As a result of the reorganization, R. E. Chamberlain, general sales manager, says a number of major changes in distributorships have been made where it was deemed that adequate facilities were not offered. Such changes were made in Buffalo, Pittsburgh, Washington, Baltimore, Toledo and Omaha.

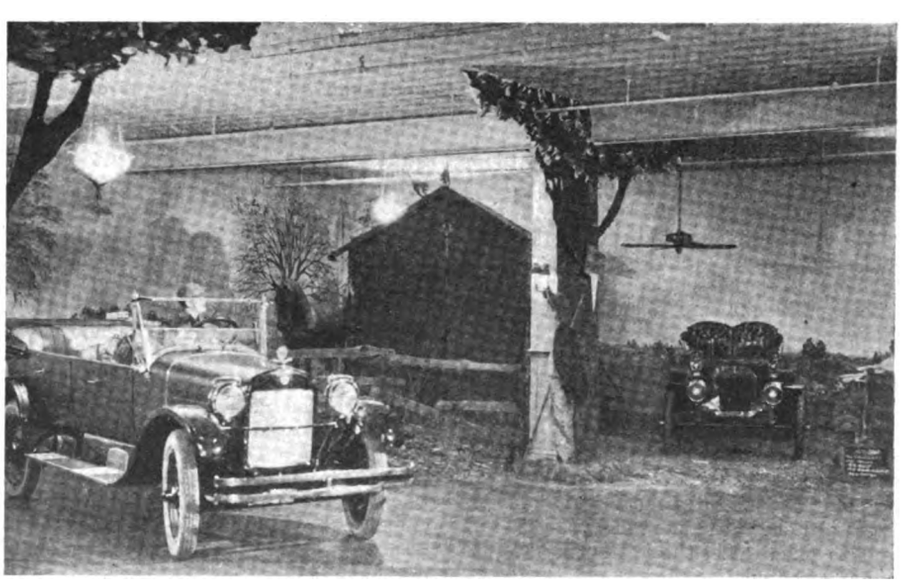
Whitehair Joins G. M. Truck

DETROIT, Dec. 12—Harry S. Whitehair has joined the national sales division of the General Motors Truck Co., making the third member of the sales force in this division. Whitehair will have general charge of all territory outside of New York and Chicago, where the company already has headquarters in the national division. His joining the G M C organization is the result of the executive's belief that large units of industry are back in the truck market again.

ROAD FINANCE PLAN MEETS WITH DISSENT

State Officials Would Have Industry Build Highways and Maintain Them

KANSAS CITY, Dec. 11—The National Association of State Highway Officials, in meeting here, passed a resolution dissenting from the proposal that motor vehicle revenues be limited to maintenance requirements. It advocates instead that motor vehicle taxes be used to pay a part of construction cost.



The resolution suggests that one-third of the total cost of Federal, State and county road programs be met from motor vehicle taxes and favors a gasoline tax of not less than 2 cents a gallon.

Public Against More Taxes

This action seems to be a result of the general sentiment throughout the country against the addition of general taxes of any kind, and the demand of the public for economy. It appears that the highway officials are desirous of carrying out their road programs as fully as possible and that in raising money for such purpose they are seeking the lines of least resistance.

The automotive industry was represented at the meeting by A. J. Brosseau, president, Mack Trucks, Inc.; R. D. Chapin, president, Hudson Motor Car Co., and Pyke Johnson, secretary of the N. A. C. C. Highways Committee. They attended the meeting of the motor truck regulation committee, held during the session, and for one afternoon discussed the general problems of highway finance and motor vehicle regulation.

A Salesroom Display That Features Dependability

The dependability of the car is deftly suggested to the spectator by this display used recently by the Reo branch, in Lansing. A painted "drop" supplied the background against which an early Reo model and a new car were shown in contrast. A few fence posts and moss, stones, etc., were used to cover the floor in the background near the "drop"

2000 ATTEND A. E. A. MEETING IN CHICAGO

Best Previous Gathering Was That in Brooklyn with 1700 Present

CHICAGO, Dec. 7—The record of the Automotive Equipment Association merchandising meetings took a step upward last night when 2000 men and women attended a meeting in Medinah Temple. The largest previous gathering was that in Brooklyn at which 1700 were present.

Ray W. Sherman, merchandising director of the A. E. A. was the speaker of the evening and members of the merchandising committee were in the audience. Sherman's story was well received and the two films "Ask 'Em to Buy" and "Shop Profits" were shown. The latter film was the Ambu Institute version, with 1700 feet of pictures devoted to electrical equipment and to service operations as taught in the Ambu school.

The audience was a cosmopolitan one, ranging from the members of the merchandising committee, jobbers, car and accessory dealers to salesmen and shop employees. The crowd was handled by 140 jobbers salesmen who served as ushers. Clyde Jennings, editor of Motor Age, presided.

These firms promoted the meeting: The Automotive Supply Co., Chicago Auto Equipment Co., Chicago Automobile Supply House, Beckley-Ralston Co., Electric Appliance Co., Motor Car Supply Co., E. D. Kimball & Co., and the American Bureau of Engineering, Inc.

CRANKSHAFT AND ROD TESTS ON ALIGNMENT

(*Continued from page* 25)

The two bearing holes in the connecting rod must be parallel. To test this, it is usual to have a connecting rod aligning jig which may be either of the type that uses two arbors, one to swing and the other to test, or it may be of the type which tests with the piston in place, thereby also checking the correctness of the hole in the piston. Both of these types are shown in Fig. 4. It is usual to have a forked bending bar handy to the jig so that the rod can be bent till it comes true. Where a jig is not available, the test can be made with arbors, V-blocks and a surface plate as shown in Fig. 5.

The piston can be tested with a micrometer of sufficient range to take the size. The variation allowable is considerably more than in the case of the shaft. An allowance of one to two thousandths is permissible up to 3 in. in diameter and slightly more in the larger sizes, although the nearer the piston is kept to exact size, the better the results to be expected.

The cylinder can be checked with a pair of inside micrometers or with a dial gage mounted on a two point support as shown in Fig. 6. This, however, only gives a roundness test or a taper test and does not indicate that the bore of the cylinder is exactly straight. An instrument built on the principle shown in Fig. 7 will give the straightness test.

The only other additional tests that can be made to insure accuracy of the working parts are the test to determine whether the bearings are at right angles to the cylinder walls and the gear distance test. The right angles test can be made with a surface gage or square and the gear distance test can best be made with the gears in position.

The careful checking of these various points and the mechanical work necessary in correcting any faults found will go far toward turning out satisfactory jobs that will give good service to the car owner and be the means of bringing additional work into the shop.

NEW YORK EXPECTING MILLION REGISTRATION

ALBANY, N. Y., Dec. 11—Estimates made by the State Tax Commission, which controls automobile registration in the State, predict that New York will be the first of the commonwealths to tag more than 1,000,000 motor vehicles. According to these estimates, it is expected there will be registration plates issued to 851,199 passenger cars in 1923, 193,000 motor trucks, 38,500 buses, 3295 trailers and 27,950 motorcycles, a total of 1,113,944 motor vehicles, including motorcycles. New York City alone will have 251,000 passenger cars, 72,000 trucks, 16,000 buses and 125 trailers.

In 1923 New York will collect its registration fees according to weight instead of price, horsepower and age. Cars weighing 3500 pounds or less will pay 50 cents for each 100 pounds; cars over 3500, 75 cents per 100 pounds. The minimum fee is $10 for six, eight or twelve cylinder cars and $8 for any other car.

STATE CANNOT GET TAX FROM GASOLINE

WASHINGTON, Dec. 12—Motorists in the State of Arkansas cannot be forced to pay a gasoline tax, pending the final adjudication of the constitutionality of the question as to whether or not a State can levy a tax of one cent a gallon on gasoline and kerosene.

The United States Supreme Court has granted an injunction on the application of the Pierce Oil Corp. to continue in force a temporary injunction secured in the Federal courts against the enforcement by the State of a State tax of one cent a gallon on gasoline consumed in motor vehicles.

The constitutionality of the question is now before the United States Supreme Court and pending the court's decision it was held that the temporary injunction in Arkansas must stand.

PREDICTS NEW YORK WILL LIMIT CAR USE

Judge in Metropolis Sees This Action Necessary to Meet Traffic Problem

NEW YORK, Dec. 11—The traffic situation continues to alarm the authorities, and Police Commissioner Enright's radical suggestion to control pedestrian traffic on sidewalks, put lights on his policemen, remove elevated railroads and widen Fifth Avenue and Broadway by removing the sidewalks, has been followed by something even more revolutionary by Judge Frederick B. House of the Traffic Court, who predicts the passing of a law limiting the number of passenger cars and taxicabs that may operate in the streets of the metropolis.

From the bench he declared that his court since the first of the year had heard 49,000 cases arising out of vehicular traffic and collected $500,000 in fines. He declared that if the yearly percentage of cars increased at the rate of the last two years, traffic soon will come to a standstill for want of space to move in.

Judge House says:

> Our cross streets cannot be widened and as a result our avenues are being overworked. I am certain some of the avenues (the north and south arteries) will have to be made one-way streets clear through to the Bronx. If automobiles in the future continue to increase as fast as they have in the past, I feel that some sort of a curtailment of passenger cars and taxis will be necessary. In the event the legislature will not pass such a measure, the police power may be exercised.

One of the steps New York is taking to ease the traffic situation is to appropriate the money necessary to change corner curbs from square turns to circular to permit vehicles to swing corners without slowing the rest of the traffic.

MORE CHANGES MADE BY TRADE IN BOSTON

BOSTON, Dec. 12—Boston's motor row continues to chalk up moves and changes. H. Ross Maddocks, who has the retail distribution for Stewart trucks, has taken on the Columbia for Eastern New England. It has been handled by M. R. Bomay until recently.

A. B. Mann, who formed the Mann Motors Co., has joined the sales department of the Paige-Detroit Co. of New England.

The Holland System, Inc., distributor of the Hanson car and the Clydesdale truck, has leased its building to the Langham Motors Co., and the latter company took possession on Dec. 1.

The Brown Motors Co., distributor of the Gray car for eastern Massachusetts, has leased a building on Commonwealth Avenue that was to have been the home of Dunlop tires, and which has been empty since its erection.

CHANGES IN THE TRADE

Clyde Walker, Kalamazoo, Mich., has taken the agency for the Moon car.

Floyd Clymer, Denver, has been awarded the Dort contract for Colorado.

Fleming Motor Co. has been awarded the Nash agency in Sioux City, Iowa.

Fairfield Motor Co. of Fairfield, Iowa, has been succeeded by the **Brown Motor Co.**

Murphy-French Auto Co. has taken over the Studebaker agency in Sioux City, Iowa.

Merril E. Stevens of Sioux City, Iowa, has become sales manager of **J. V. Thorndike Co.**

Schall-Crouch Auto Co., Baltimore, has been named distributor for Moon cars in Maryland.

Coolbaugh-Macklin Motor Co. has been appointed Haynes distributor for the Philadelphia territory.

Miley Bros., Reo dealer in Charlton, Iowa, has opened a branch office in Ottumwa with **B. B. Mergen** as manager.

T. N. T. Sales Corp. has moved its executive offices from 1947 Broadway, New York, to 571 Broad Street, Newark, N. J.

Preston Motors Co. of Birmington has opened a sales agency in Huntsville, Ala., for the sale of the Premocar.

S. P. Davis and his son, **S. P. Davis, Jr.,** will distribute the Durant and Star lines in Arkansas under the name of the **Davis Motor Co.**

William D. Garrison & Son, Kalamazoo, Mich., are successors to **R. L. Bixler,** as agent for the Nash in southwestern Michigan.

H. F. Lummis will become associated with his son, **Merle Lummis,** head of the **Lummis Sales Co.,** Quincy, Ill., distributor for the Gray.

L. H. Damman Motor Co., Davenport, Iowa, has secured the local agency for the Gray car. The company also handles the Mitchell.

The Universal Car Co. of Centerville, Iowa, has taken over the business of the **Plano Garage** at Plano. **H. R. Over** will be the manager.

Faulhaber Motor Co. has secured the contract to distribute the Cleveland in Arkansas and will handle the line along with the Wills Sainte Claire.

R. J. Hamil has been added to the organization of the **Wilson-Nash Co.,** Baltimore, and will fill an executive position. He was formerly a distributor in that city.

Saskatchewan Motor Co., Regina, Sask., has assumed the wholesale and retail distribution of the Durant and Star cars for the south half of Saskatchewan.

W. J. Roberts, who has been identified with the Pierce-Arrow organization for many years, has been appointed distributor for the Pierce-Arrow cars in the Cleveland territory.

Elcar Motor Sales Co., Philadelphia, has organized to handle the Elcar in Pennsylvania, Delaware and southern New Jersey. **R. Ramsay** is president and **Frank Fisher,** vice-president.

A. W. Helbush, associated with the **Chanslor Lyon Co.** of San Francisco for the last ten years, is now connected with the **Jas. S. Remick Co.** of Sacramento in the capacity of sales manager.

W. A. Muiry Co. of Providence, R. I., formerly Lincoln distributor for Rhode Island and the Attleboros, has been appointed distributor for this same territory for the Paige and Jewett line.

White Co. has occupied its new service station for trucks at Archer Avenue, Wallace Street and Twenty-fourth Place, Chicago, which has 55,000 sq. ft. of floor space, nearly all on one floor.

Tennant Bros., conducting an automobile financing business with headquarters on Chicago's automobile row, have opened a branch office at 4222 Woodward Avenue, Detroit, in charge of **J. W. R. Tennant.**

Star Auto Co. has been organized at Erwin, Tenn., by **C. T. Bickley** and **T. J. Quisenberry,** both of that city, and has established a distributing agency in that section of Tennessee handling the Studebaker, Durant and Star.

Harry P. Branstetter, Kissel distributor in Chicago, has opened a new retail sales room at 2538 South Michigan Avenue. The wholesale, used car and service departments will be continued at Wabash Avenue and Twenty-sixth Street.

Van Metal Wheel Co., San Francisco, has been organized to handle dealers' sales of the Van hollow spoke malleable and aluminum wheels in california. The new company is controlled by interests operating the Lambert tire agency in that city.

Hugh Sharp, for ten years associated with the **Harley-Davidson Motor Co.,** Milwaukee, with important duties in the promotion division of the sales department, is now associated with the **Northwestern Motor Car Co.,** Milwaukee, Ford and Lincoln dealer.

Sanger Automobile Co. and the **George H. Williams Co.,** handling the distribution of the Franklin car in Milwaukee, are now operating as the **Sanger-Williams Co.** The **Lewis Motor Co.** has been appointed the Franklin dealer for Fort Smith and adjacent territory.

R. D. Brown has been appointed general sales manager for the Painter-Dunn Co., Pittsburgh, distributor of Pierce-Arrow cars and trucks. Heretofore, **C. A. Painter, Jr.,** has acted as sales manager for automobiles and **T. F. Dunn** has had charge of the sale of trucks.

Dort Motor Car Co. announces the following new dealers: **I. E. Bamberger,** Lebanon, Pa.; **S. J. Webster,** Muskogee, Okla.; **T. H. Douglas,** Bakersfield, Cal.; **Braun-Stecker-Stevens, Inc.,** Los Angeles; **Merrill Garage & Vulcanizing Co.,** Merrill, Wis., and **Jess D. Akin,** Farmington, Minn.

Fred Woelihaf, head of the **Woelihaf Motor Co.,** Burlington, Iowa, Durant distributor in Des Moines, Henry and Louisa counties, Iowa, and Henderson county, Ill., has signed a contract to handle $275,000 cars next year. Local dealers are to be appointed in various towns at once.

Lange & Tscharner Motor Car Co., Dubuque, Iowa, has been named factory distributor for the Durant and Star in five counties. **C. W. Joseph** has been appointed sales manager and is arranging territory. **L. L. Bauers,** 10 years with the Dubuque Overland Co., becomes shop foreman and service man.

C. H. Langford, Ford dealer at Conyers, Ga., for many years, has purchased an interest in the **C. C. Baggs Auto Co.,** Atlanta Ford dealers, and the name of the company under the change becomes the **Baggs-Langford Motor Co.** The new company handles the Ford and Lincoln in the Atlanta territory.

Mason Tire & Rubber Co. has selected Des Moines, Iowa, as a division point of distribution. **Joe Dine,** formerly general manager of the Madison Tire & Rubber Co. of Buffalo, has been appointed division manager and **C. J. Marx,** formerly branch manager for Mason at Atlanta, has been transferred to the Des Moines branch.

J. E. Gibbons, formerly in charge of the wholesale department of the **Apperson Motors** of Pittsburgh, has been made assistant manager of the Apperson factory branch in Pittsburgh. **Nick Strider, Jr.,** who was transferred some time ago to the Cleveland territory, is taking charge of both the Pittsburgh and Cleveland branches, spending three days a week in each city.

Lon Credelle, an Atlanta accessory dealer for several years and one of the best known automobile men in the southeastern field, has expanded the scope of his business and entered the wholesale field as well as covering Georgia territory for a number of well known accessory lines. The change becomes effective on Jan. 1, 1923. Credelle has served as president of the Atlanta Automobile Association and of the local accessory association.

Winton Co., following a policy established early in the year, has disposed of its Chicago factory branch, and has appointed the **Allison-Rood Co.,** former Lincoln distributor, as its sales agency in the Chicago territory. The Allison-Rood salesrooms are at 2518 South Michigan Avenue, next door to the former Winton branch. **H. M. Allison,** head of the new Winton dealer firm, had the Packard agency for some time before taking on the Lincoln franchise.

Dickerson & Mitchell, Yonkers, N. Y., handling the Hupmobile, has taken on the sale of the Peerless. **M. F. Zuber,** formerly service manager of the **Pilot Motor Car Co. of New York** and the **Hupmobile Co. of Newark, N. J.,** has taken charge of the rebuilt car department of the **Peerless Motor Car Co.,** New York factory branch. **George M. Brock,** for years used car manager of the **New York Locomobile Co.,** has taken over the used car department of the New York Peerless branch.

Mar-Del Mobile Co., Baltimore, and the **Baltimore Cadillac Co.,** have been merged and will be known as the **Cadillac Co. of Baltimore.** The officers will be **George Miller,** president; **J. A. Muehleisen,** first vice-president; **F. S. Bilven,** second vice-president; **Paul Jones,** secretary, and **Earl Williams,** treasurer and general manager. The Mar-Del headquarters will be used for the combined business. For the time being the service department for Cadillac cars will be continued at 1007 North Eutaw Street.

C. S. McKee, for the last ten years connected with the marketing of Willys-Overland cars, has become identified with the **Clemens Automobile Co.,** Des Moines, as retail manager. McKee has been associated with the industry since 1908 and has served as sales manager for the Willys-Overland factory branches at Omaha and Indianapolis. In the latter city he worked with **Verne Orr,** who is now manager of the Clemens company. **H. C. Carr,** formerly sales manager, has become associated with the **B. F. Goodrich Co.**

N. B. Sprong has become general manager of the **Northwest Haynes Co.,** Minneapolis, distributing organization in the Northwest. He joined the organization in April and has suceeded **J. N. Knutson,** who, with **A. C. Porter,** has retired except in an advisory capacity. **S. J. Logan** is manager of service. The company has distributed Haynes cars for nine years. **R. A. Calhoun** is to be vice-president and **W. H. Brigham,** manager of the wholesale department. **Harry Lane Morris** has arrived in Minneapolis from the Haynes factory as newly appointed district representative. He will have headquarters with the Northwest Haynes Co.

ASSOCIATION ACTIVITIES

To Celebrate Widening of Avenue

CHICAGO, Dec. 8 — Chicago automobile dealers located on Michigan avenue are preparing to celebrate the opening of the widened avenue, work on which has been practically completed, by decorating their fronts and sales rooms for the week of Dec. 16 to 23, and with a parade and evening program on Dec. 19.

The widening adds 14 feet to the avenue which is one of Chicago's most heavily traveled automobile boulevards. The widened portion extends from Twelfth street to Thirty-third street, through the whole of "automobile row." The improvement was accomplished by setting the curb back seven feet on each side without disturbing the building line and without unduly narrowing the sidewalks. It greatly facilitates traffic and adds to the convenience of persons having business with the various automobile and accessory stores along the street.

The automotive merchants on the "row" will have a banquet for members of their firms and their employees at the Lexington Hotel at 6.30 p. m. Dec. 19 and later in the evening will stage a mardi gras celebration throughout the length of the row. The smooth pavement will be roped off for dancing and the public will be invited to come in costume and in holiday mood for confetti, whistles, ticklers and all that goes with a carnival.

The occasion will be utilized to the full advantage, according to members of the Chicago Automobile Trade Association, to attract public interest to the wonderful automotive stores lining the street and it is confidently expected that a considerable stimulation of sales will result.

Greenville Show Dates

GREENVILLE, S. C., Dec. 11—The Greenville automobile show will be held in Textile Hall March 28, 29, 30 and 31, according to announcement made at the last meeting of the Automotive Bureau of the Chamber of Commerce.

The show committee is headed by Browning Goldsmith and Charles Upchurch. H. B. Spring, president of the Chamber of Commerce, urged the automobile dealers to take steps to make Greenville the automobile distributing point of South Carolina, instead of buying their cars from Charlotte, Columbia and Atlanta.

Co-operates in Traffic Handling

PHILADELPHIA, Dec. 12—Members of the Philadelphia Automobile Trade Association heard a talk on traffic regulation by Captain Harry B. Schultz, in charge of the traffic squad of the city police force. Schultz urged that all drivers familiarize themselves with the new semaphore signal system. He criticized the methods of some drivers, explaining what they should do under given circumstances. After his talk, Schultz answered questions in an open forum.

Louis Block president of the association, said the association stood ready to help in a co-operative movement between drivers and police to promote carefulness and that the association plans to issue cards of instruction to all purchasers on the operation of their cars in traffic.

Ludlum Speaks in Philadelphia

PHILADELPHIA, Dec. 13 — David S. Ludlum, president of the Autocar Co., Ardmore, Pa., addressed 65 members of the Automotive Service Association of Philadelphia, present at the monthly meeting of the association, on the value of service. J. B. Dickson, president of the association, announced that provision has been made for the appointment of a legislative committee to take up with the local Chamber of Commerce the question of better traffic regulation by the city and State authorities.

Chicago Lists Car Sales

CHICAGO, Dec. 10—The Chicago Automobile Trade Association has inaugurated the publication of a monthly bulletin listing all models of cars sold in Chicago, with the f.o.b. factory prices and the prices delivered in Chicago with war tax and freight charges paid.

PERSONNEL CHANGED BY HENDERSON TIRE

COLUMBUS, Dec. 12—A number of changes have been made in the department heads of the Henderson Tire & Rubber Co., Inc. F. P. Harrington has been made general sales manager. Prior to the change he was identified with the Dayton Rubber Manufacturing Co., Dayton, as assistant sales manager, and had also been connected with the sales department of the Miller Rubber Co. for about ten years.

Roger H. McKinstry, for a number of years associated with the Miller Rubber Co., has been made special sales representative in western Ohio, Indiana and Michigan.

J. H. Redfern, formerly branch manager of the Dayton Rubber Manufacturing Co. at Denver, has been made special representative covering North and South Dakota, Wyoming, Idaho, Montana, Colorado, Utah, Arizona and New Mexico.

Harry J. Crawford has been named special Pacific Coast representative, covering California, Washington, Oregon and Nevada.

May Discontinue Jackson

DAYTON, OHIO, Dec. 9—The Jackson car, formerly manufactured in Jackson, Mich., will be discontinued, according to the plans of Associated Motor Industries, Inc. It is planned to replace the Jackson line with a smaller National. It has not yet been determined whether the small National car will be made in Jackson, or whether the factory there will be used as a body plant.

Gasoline Consumption Declined

WASHINGTON, Dec. 12—Statistics compiled by the Bureau of Mines show that consumption of gasoline fell off 12.98 per cent during September.

MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

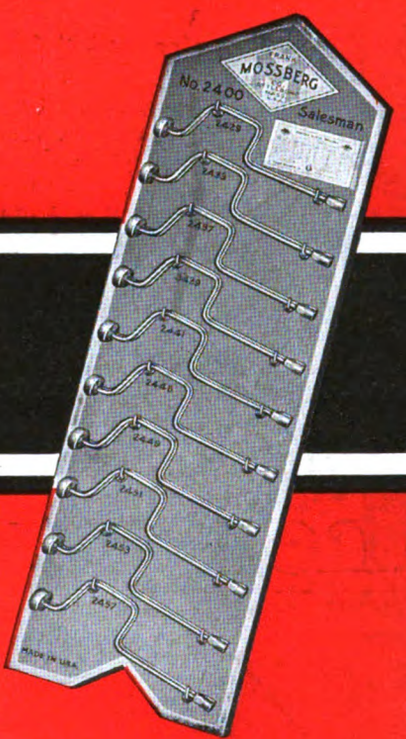
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board assortment contains 70 Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

One of Chandler's 1923 Surprises

The New CHUMMY SEDAN

THIS photograph of the beautiful new Chummy Sedan constitutes a little advance notice on 1923 Chandler plans.

It is typical of a line of cars destined to be much discussed within a few days.

The two door Chummy Sedan is more than a new car. It is really a new *kind* of car, low in price, but lacking nothing in finish, upholstery and appointments.

The time is past when the public will buy any car, closed or open, merely because it is cheap.

1923 will see a demand for a closed car that combines low cost with richness and permanency. It must have a metal body of permanent construction.

The Chummy Sedan anticipates this need. Its great advance is typical of the entire Chandler line as it will be seen at the 1923 Shows.

Whether you are a prospect looking for a new car or a dealer seeking a new account, it will be wise to defer decision until you have studied Chandler 1923 developments.

See Chandler at the Shows:

Volume LXXIII
Number 12

PUBLISHED WEEKLY AT
NEW YORK, DECEMBER 30, 1922

Price five cents a copy
Three dollars a year

Champion Superiority Is Important to Dealers

That dependable Champion Spark Plugs are better spark plugs—due to the highly improved Double-Ribbed Core—is of great importance to every dealer. It means that you can sell Champions with every assurance of satisfying the customer. This, in turn, means quicker turnover and greater profits.

You can greatly increase your spark plug business by urging car owners to buy Champions by the set to assure better engine performance and an actual saving in gas and oil.

Champion Spark Plug Company, Toledo, Ohio

Champion Spark Plug Company of Canada, Limited, Windsor, Ontario

There is a Dependable Champion Correctly Designed and Finely Made for Every Engine

CHAMPION

Dependable for Every Engine

***Champion X** is the one spark plug recognized as the standard for Ford cars, trucks and tractors. Millions are in daily use. They are a sure profit maker for you.*

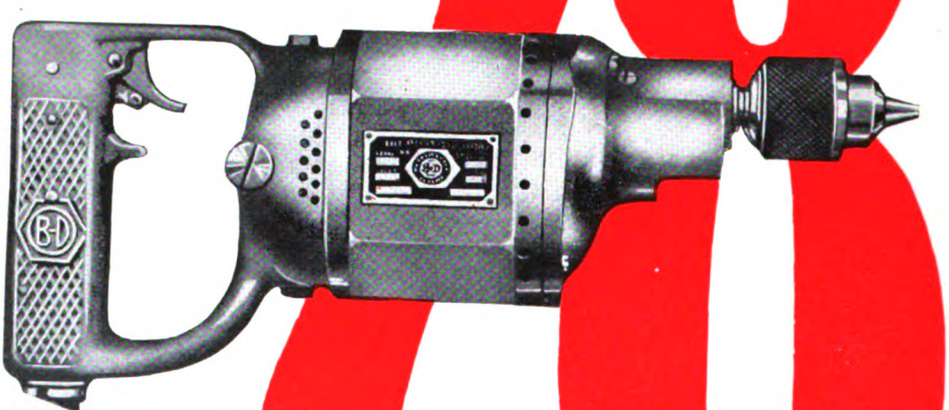
BLACK & DECKER

¼ inch PORTABLE ELECTRIC DRILL



"With the Pistol Grip and Trigger Switch"

Price reduced to

$28.00

was $39.00

20

Owing to the large demand for the Black & Decker Quarter-Inch Portable Electric Drill our production on this unit this year has been practically trebled. This has enabled us to reduce our manufacturing costs, and in accordance with our established policy we are passing the saving on to you.

This is the standard Black & Decker Quarter-Inch Drill, exactly the same as has previously been sold for $39 00 except that it has been improved by the addition of a geared-nut chuck instead of a hand operated chuck.

A new folder describing this unit in detail, INCLUDING SPECIFICATIONS, is yours for the asking

MOTOR WORLD for DEALERS, JOBBERS AND GARAGEMEN

Vol. LXXIII New York, U. S. A., Wednesday, December 20, 1922 No. 12

THE SALESMAN YOU'RE LOOKING FOR—Out of every five, ten or fifteen men who want to join your selling force there is one you ought to hire—for your good and his. Can you pick him out? This story is full of practical suggestions for selecting salesmen and developing them after you get them. It was written for Motor World by one of the conspicuously successful automobile merchants of the country.

Building a Retail Sales Staff

How Dealers Can Select, Train and Control Men for Motor Car Merchandising

By C. S. Henshaw

President, Henshaw Motor Co., Dodge Brothers Dealer, Boston

A MAJORITY of the leading retail automobile dealers contend that men suitable for their business are scarce, especially in the sales division, and they are right. It seems strange and one wonders why successful salesmen are not available for the automobile industry when good men can usually get splendid positions.

One reason is that selling is fascinating to really successful men regardless of the nature of their work and they can seldom see any advantage in changing positions, particularly if they are associated with a progressive organization handling a good product.

One way to get men is to advertise for them. In a large city a carefully worded advertisement inserted in all local papers of large circulation calling for high-grade salesmen would probably bring upward of 200 replies.

Another source may be found within the dealer organization, among accountants, stock clerks, service men, and others who wish they had the chances some of their fellow employees have and who do not realize that opportunity is knocking at their door every day.

Most of these have overlooked the advantage of a broad acquaintance with customers and the great good will

Digitized by Google

building value of keeping constantly in touch with them, either by personal contact, letter writing, or even through telephone calls. The employer can generally see two or three employees stand out head and shoulders above the others, in activity and results, and these if worthy should always be encouraged by advancement.

It is neither ethical nor a good rule ever to hire a person away from a competitor, but observation of salesmen handling other lines often reveals the suave clerk behind the grocery counter, or the typewriter representative who has ability and may be in a receptive mood to listen to a change.

It is surprising to note the number of people who would like to change and are attracted by the automobile industry but cannot afford to take a chance, particularly married men.

FROM 1905 to 1910 the industry was considered a game.

1911 to 1920, a business.

1921 on, it is a science.

This is the thought of C. S. Henshaw, head of the Henshaw Motor Co., of Boston, and author of the salesmanship story beginning on the preceding page. This thought it made to permeate the Henshaw organization. It is one of the first things new salesmen and even applicants for sales positions hear about. Just about right, isn't it?

A plan whereby one can test himself without risk has been recently tried out successfully by our organization.

The applicant purchases a good used car, at a price that he can afford, financed by the dealer if necessary but bought right as to make and condition. He takes it home, perhaps learns to drive, grind the valves, clean the carbon, and becomes familiar with its construction.

In the meantime he inserts an advertisement in the local papers offering it for sale at a figure that will net him a small profit. Evenings, afternoons off and holidays may be devoted to showing the car to prospective purchasers or friends.

In this way, and without giving up his position, he learns motor car construction and gains confidence in selling. After having sold three vehicles in any 30-day period, the dealer may allow him a 4 per cent commission on future purchases, and by watching for good buys the applicant can frequently add 6 per cent to the price, thereby making 10 per cent on each deal, and have the pleasure of owning and operating a car as well.

Should he market 10 cars in any 60-day period while working under these conditions, a permanent remunerative position in the automobile business is assured.

Wise Policy to Interview All Applicants

It is a good plan to grant all applicants for sales positions an interview, because notwithstanding there may be no vacancies, a new position can usually be created for a 100 per cent go-getter and producer.

It is not wise for a dealer to assume the responsibility of taking a man out of a sure permanent position, particularly if he is married, for an uncertainty. A good man who feels confident of his sales ability should have no difficulty in marketing one used car a week averaging $600 in price. If he does that success is practically assured and guesswork eliminated. If he fails we may or may not engage him. Each case must be judged on its merits.

The requirements are—

1—Good education.
2—Pleasing personality.
3—Ability to work hard.
4—Truthful and reliable.
5—To have initiative and tact.

Even if no salary is paid at all a man without a good foundation might prove an expensive proposition, because he would come in contact with prospective purchasers, and through his lack of ability give a wrong or incomplete story, so that a prospect would be lost whom another good man might save.

In judging a man's record one should have something tangible to go by. If life insurance has been sold, how many persons did the applicant insure during the previous year? What was the average amount of the policies? If real estate, what was the volume in dollars and cents during the calendar year? If groceries, what number of new customers did he secure? How many salesmen were in his district representing the same line? How did his selling record stand in comparison with others?

Surprising as it may seem, records of this sort are seldom kept by really high grade men, although the answer to these questions are the applicant's bread and butter and the employer's guide.

Look Up the Applicant's Record

The big majority of applicants for sales positions either do not consider their previous sales record of sufficient importance to keep a permanent record of it, or else they are not proud of it, and therefore pass it over lightly.

If the applicant's story appeals to us, and we believe he has a satisfactory record, we tell him that he can consider himself engaged, providing his story is 100 per cent true, and then we proceed to check it up through his previous employers.

It is well to know the number of positions the applicant has filled for five years back. Some boastfully name several, thinking it gives the impression of much experience rather than one of instability.

SALESMEN

PERMANENT positions in our passenger car sales division for men between 28 and 45, accustomed to plugging, with personality, determination and confidence in their ability to successfully interview business heads; compensation on any basis, salary and commission or otherwise; earning $5000 upwards; chance for advancement to higher positions; write only, giving brief details, education, age and standing by comparison among sales forces you have been associated with; communications held confidential. Address C. S. HENSHAW, president, Henshaw Motor Co., Dodge Brothers Cars, 989 Commonwealth av., Boston 34, Mass.

This is the way the Henshaw Motor Co. advertises for salesmen. There is nothing "blind" about the ad. The applicant knows just what he is going into and the ad gives him more than a general idea how to go at it. Ads like this often produce as many as 200 applications, out of which the employment of two men is a fair percentage. This story tells how Henshaw finds the men he wants and makes them part of his organization.

Often the applicant will submit several testimonial letters as evidence of his ability, not realizing their small value. Employers know in advance that as a rule the letters would not be shown unless satisfactory.

In looking up a prospective employee never ask about the good things. Those will be mentioned anyway, but invite some word regarding the "outs."

Letters received from newspaper applicants may be passed upon by several executives in the dealer organization. Each one classifies the letters as to the apparent merits of the applicant by marking them "A," "B" or "C," based on the qualifications as the executive judges them. A letter should average two "B's" or better to come up for further consideration. A liberal estimate of those who will qualify out of the total applicants would be from 12½ to 25 per cent.

Many of those who reply will be discarded because they

Digitized by Google

do not answer all of the questions, others will have shifted positions too often, or have never had a successful record. Some will have held positions that only carry the well wishes of the employer. Then there is the chronic "job hunter"—trusting to luck that his letter will be accepted regardless of qualifications.

When it comes to interviewing applicants, in order to guide each interview into standard channels the executives use a chart containing questions pertinent to the man's qualification. There is nothing novel in the general idea of this chart excepting the final summing up of the man's rating in each executive's opinion, on a percentage basis.

Charting the Applicant

This has advantages without being involved. Every business and every employer stresses different qualifications as being the most desirable. For instance, one man may consider courtesy more desirable than appearance, so would chart courtesy as 15 per cent and personal appearance 10 per cent.

To merit either of these ratings the applicant would have to be perfect in both. Since perfection is hard to obtain, a good appearing and exceptionally courteous man might be rated at appearance 8 per cent, courtesy 12 per cent, which, with other ratings on desired qualifications, would indicate the portion of 100 per cent that the executive had sized him up at.

Any man who passes 75 per cent or better is considered worth while going into details with.

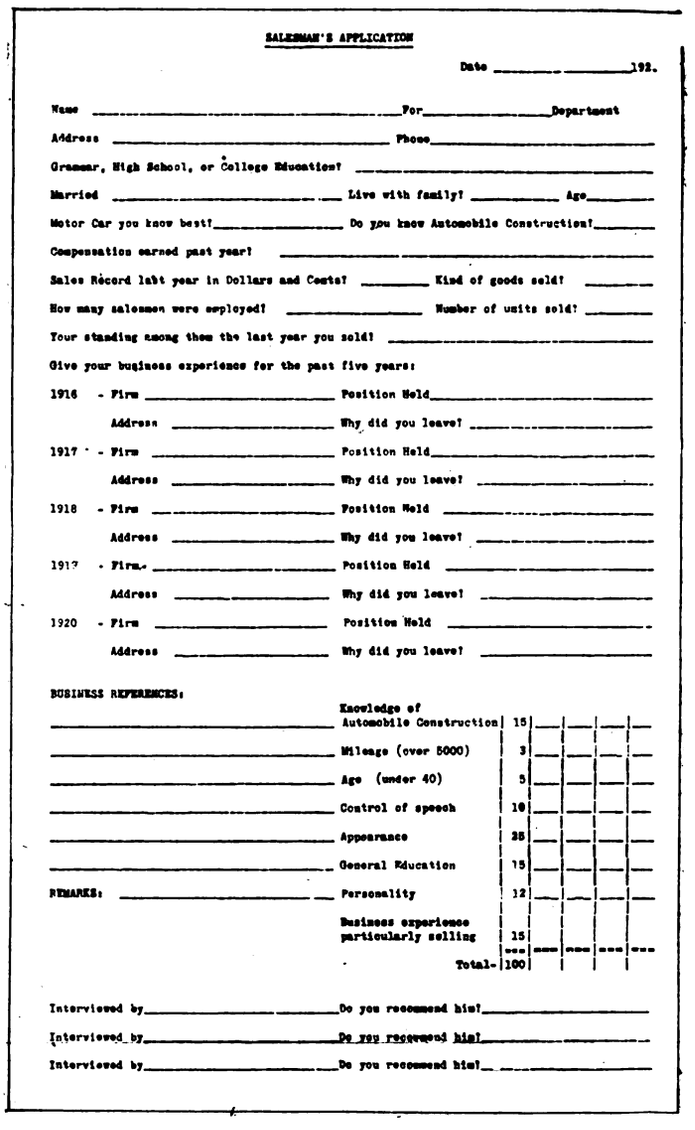
This charting process reduces the original applicants whose letters have warranted a first interview to possibly five or 10 men.

These are re-interviewed by the same and other executives, who tighten up on their estimates, and the final charting usually leaves but one or two out of possibly 200 who are worthy of being employed.

A company using such a system becomes very difficult to be associated with, but once men have joined it, the executives will spend unlimited time and money to vindicate their judgment in their choice of men.

Selling automobiles or allied lines is largely an outdoor life. Salesmen meet the better class of people who have both time and money, therefore are usually in a receptive mood to talk automobiles, while they will not always listen to a book agent, real estate man or insurance solicitor.

The remuneration is liberal, frequently on a salary and commission or bonus basis, a man's earnings depending almost entirely upon the effort he puts into his work.



The difference between an order taker and a salesman is the difference between booking $50,000 worth of business and $100,000 worth a year. *There is no salesmanship involved in getting the name on the order until the customer has said "No!" Then the real salesman starts to sell.* A certain number of sales can be made without much effort, but it takes initiative to close the last $50,000 worth, and the man who succeeds is usually rewarded by greater earnings not only because he sells more but because the more he sells the higher his commission goes if he works on a sliding scale.

Some Thoughts on Selling

There are many positions higher up all within reach of men on the firing line, such as sales director, branch or general manager, a dealership, or even a position on the manufacturer's executive staff.

Positions are generally permanent, and it is an exceptional man with sales ability who is not able to maintain a motor car, put money in the bank every Saturday night and buy his own home.

Employees should never be asked to work on a basis that requires "pull," "politics" or the necessity of waiting

This is the salesman's application blank used in the Henshaw organization. Note the detailed information which is obtained from the applicant. At the foot of the blank are spaces where three or more executives who may interview a single applicant rate him as to his qualifications and their judgment as to his availability for a selling position. This system prevents the costly "hiring and firing" that follows too much guesswork and too much attention to hunches in taking on men.

for "dead men's shoes" in order to forge ahead. Give everybody a chance.

It takes only a comparatively short time before commensurate returns are obtained if the applicant is carefully chosen, but it may be weeks or months before he can answer all questions pertaining to the business intelligently. His reports should be carefully and frequently analyzed. He should be advised with, instructed, and encouraged daily. Few realize that there are close to 4000 parts of an automobile, and that one can talk continuously for two hours about a car without repeating. A progressive man can truthfully say he learns something new every day, regardless of how long he is in the business.

A series of 50 or more vital subjects pertaining to construction and policy should be put in the hands of each new salesman, and learned by heart before he is allowed to start on the firing line.

The larger organizations would do well to issue a book of Sales Rules as a constant reminder and guide.

Hardly a week goes by but what someone applies for

Digitized by Google

a "job," because they have always wanted to get into the "game." A hint to that type that they are in a business establishment, and not an amusement resort, usually brings an apology and an explanation that they did not think of it in that light.

Some Hints to Salesmen

Favorite positions of the "don't think" type of salesman are to have one foot on the running board of a car, to lean on the door, to stand on the showroom floor with hands in his trousers' pockets, jingling keys and money, to idly read the newspaper, puffing a cigarette, pipe or cigar, while the golden minutes fly by. Those who are anxious to forge ahead accept corrective suggestions.

Top notch salesmen are frequently high strung, like thoroughbred race horses. They strain in harness waiting to be released and on the go. In action they are nervous and must be more or less catered to. They need to be repeatedly told not to worry and convinced that nothing is worth worrying about.

This industry has grown so rapidly and to such large proportions that the comparatively few good men are quickly absorbed and outnumbered 25 to 1 by the mediocre class.

Such a scarcity works a tremendous hardship upon the dealer organizations of the country, and the keen competition arising from the tremendous output of the manufacturers which must be distributed creates a demand for the highest type of men which far exceeds the supply. Consequently, the dealer who uses the utmost caution in the selection of his sales staff saves many dollars in non-productive and expensive labor turnover.

Henshaw's "Things That Salesmen Ought to Know"

Motor World is able to give below what Henshaw calls "Fifty or more subjects on which the salesman must be thoroughly versed before starting out on the firing line." Look them over. Do your salesmen know all of them? If they don't, can you start a series of sales meetings and study hours to provide your men with this or other sales ammunition vital to the merchandising of your car or truck?

Paper Work

Use of Retail Order Blank (New Car).
Use of Retail Order Blank (Resale Car).
Use of Re-sale Agreement in connection with sale of prospect's used car.
Use of Credit Reference Memorandum.
Use of Rental Purchase Plan.
Use of Outside Purchase Invoice—in purchasing prospect's car outright.
Use of Accessory order blanks.

Demonstrations

Why they should be short.
Why bring prospects to store.
Why make specific appointments.
Why not to cater to speed or stunt fiends.
Why be sure demonstrating car is in proper condition.

Good Will

Car properly sold is first step toward good will.
Personal interest after delivery.
Owner as a source of prospects.
Have owners tell any car troubles to you rather than neighbor.
Never promise things unless you can go through with them.
Cultivate after delivery interest.
Never deviate from company's or manufacturer's policy.

Price

Strictly one price.
Tires or accessories never given gratis or at a discount.
How delivered price, which includes tax and transportation, is determined.
Price cutting reflected in used car deals.

Guarantee and How Warranty Applies

Sell dealer's reliability.
Avoid use of the word "guarantee."
Do not guarantee oil, tire or gas mileage.
Standard warranty N. A. C. C. what it means.
Tires, accessories, etc.
Make all transactions clean cut.

Accessories

Use word "necessaries" rather than "accessories."
Additional profit to salesman.
Prevent owner from buying unsatisfactory articles elsewhere.
All devices tested by our experimental department before recommended.

A Few Don'ts

Don't guess.
Don't talk about other makes of cars.
Don't argue with prospect.
Don't ridicule condition of used car.
Don't slop around; step lively.
Don't lean on desk or drape yourself over car.
Don't get familiar with employees in prospect's office; this refers particularly to stenographers.
Don't forget that the prospect is always right.
Don't be too familiar with fellow workers in front of prospect.
Don't confuse the purchase of the prospect's used car with the sale of the new vehicle. They are two separate transactions.
Don't bluff—prospect may know.

Closing

Ask them to buy.
Three or four calls should be sufficient.
Ask for order every time you call.
Show enthusiasm—it's contagious!
Be concise!
Put a punch into every statement!
Examine yourself if orders do not come.

Complaints

Stop trying to sell and get details.
Report to proper executive—follow it through to a finish.
Bring in a complete and intelligent story and do not take either side until you hear both.

Psychology

Stand beside desk where prospect is sitting if possible.
Telephone executive frequently in presence of prospect, particularly regarding delivery dates.
Get prospect in affirmative mood.
Assume that he is going to purchase the car.
Remember there is a woman in the case 60 per cent of the time—sell her first.
Find out why he won't buy.
Is your competitor a new piano, a fur coat, piece of real estate or another car?
Find his weakness.
Make yourself agreeable and not self-important.

Mechanism

Find part of car prospect is interested in and sell him on that alone.
Unlimited opportunities for sales arguments in connection with chassis.

Chassis Instruction
Road Lessons

Thoughts on Selling

THERE are salesmanship thoughts in abundance in the story by C. S. Henshaw concluded on this page. There will be more such thoughts, also in abundance, in the Before Shows Number of Motor World, to appear next week.

The thoughts on selling in the Before Shows Number will be devoted to show-time selling. Make a note to watch for them.

Ask 'Em to Deposit

When Prospect Hasn't Nerve to Pay and Salesman Hasn't Nerve to Ask There's No Sale, Says Quaker City Dealer

CHARLES W. HALLAR

CHARLES W. HALLAR, who is president of the Chevrolet Dealers' Association of Philadelphia and head of the Quaker City Chevrolet Sales Corp., says his biggest battle in the automotive business was overcoming the shyness of salesmen in requesting prospects to "come across" with initial money on the transaction after making a sale. He has a slogan as effective in its particular line as that of the familiar one of the A. E. A., "Ask 'Em to Buy." Hallar's is "Ask 'Em to Deposit." His salesmen are doing it regularly now.

"Usually," says Hallar, "the prospect has the money, but hasn't the nerve to make a decision more or less binding, especially where he has been hesitating and vacillating for some time between several makes of cars. There's nothing that helps him decide like the expert salesman's confident and convincing, 'now let's have your deposit on this car.' *Where the prospect hasn't the nerve to put down his money and the salesman hasn't the nerve to ask him to do so, there is no sale.* I have found that the average customer feels a mighty relief in making a final decision as to the car he will buy and nine times out of ten will not repudiate a deposit. The good salesman helps to bring about this relieved state of mind and gets the deposit."

Hallar tells a story illustrating this point. He was on the floor, one day, and overheard one of his salesmen trying hard to close a deal with a prospect who was holding him off. The salesman was entering into the excellence of construction of the car and what he said in technical terms sounded like a manufacturer's literature.

The bored expression on the face of the prospect showed that the salesman was getting farther away from the sale, the more he explained. Just then another prospect entered. There being no other employees on the floor, the salesman excused himself for a moment from the first prospect and, turning his attention to the second, probably started to talk technicalities all over again. But Hallar didn't wait to listen. He strode over to the first prospect and made a customer out of him. This is how he did it.

"What do you know about the technical side of this car?" asked Hallar.

"Not a blamed thing," shot back the prospect.

"You want to know what it will do for you and how it will operate and if it is suited to your needs, don't you?"

"That's the only thing I care about."

"All right," said Hallar. "I'll tell you in a few words."

And he did.

"Now," said Hallar, "you say you like this car and it's the one you should have. Give me a deposit on it and it's yours."

"How much do you want?"

"All the money in your pocket."

"Oh, I couldn't give you that," replied the prospect.

Valuable tip, this; evidently our friend has so much money he carries a roll about with him that would choke a hippo, thought Hallar, shuddering when he considered how near the salesman was to letting him get away unsold.

"Give me $500, then," said Hallar.

Snap-pop! Off came the rubber band from the roll and the five hundred smackers eased into the till. Sold!

That's Hallar's system—and he keeps it well lubricated.

None of Hallar's salesmen has talked technicalities to a prospect from that day to this, unless he sees the prospect is a "bug" along that line. He now has sixteen top-notch salesmen, distributed between two buildings—one on Chestnut Street and the other on North Broad Street. He has "prayer meeting," as they all call it, every Monday morning, when he hears their experiences with prospects and customers and states his views in reviewing theirs. At first the men were somewhat bashful about confiding all their troubles, but Hallar encouraged it and this has made for solidarity in the organization. He hears at "prayer meeting" about such "kicks" as customers have made and about what sales resistance has to be overcome in landing "John Doe's" signature on the speckled line. Each salesman carries a vest pocket notebook in which he jots down all the data to be brought up in "experience meeting." This habit has helped to clear up many hazy points and has proved decidedly worth while.

Hallar believes thoroughly in keeping in touch with each salesman and with the situation. This contact begins as soon as Hallar arrives in the morning. Every salesman hears the query: "How many orders have you in your pocket this morning?" If he has none—"Well, what's the matter?" He doesn't waste time scolding the men, but as soon as he has learned conditions, he tells each man who has fallen short some constructive thing to do at once to better the situation.

Same thing with the salesmanager. That official has a list of used cars, among other things, and it is his duty to see that a blue pencil line is drawn through the items on that list as soon as possible. Hallar must have results all the time. If he does, everybody profits. All the salesmen are on straight commission and a drawing account is a thing unknown in the system.

But he has monthly prize contests to stimulate the men to healthy rivalry in sales—and the prizes are substantial, too. He offers three. Those who have the biggest sales records by Christmas Eve will get, respectively, this year, a suit of clothes valued at $50, a hat worth $10 and a pair of shoes costing $10.

One thing he is never tired of telling "the boys," is this:

"The harder you dig, the better your sales record."

Only one man out of his entire sales force "fell down" in October sales.

At first he had different staffs for the new and used cars, but abandoned the plan and now the same salesmen are used for both divisions with better results for this house. The average turnover in used cars has been approximately forty a month. The salesman gets 5 per cent on every used car he sells and seven and a half per cent on every lone new car. If, however, he sells two new cars in a week, he gets 10 per cent on each of them. He never fails to emphasize service to the customer.

THE Manual of Used Car Co-operation has aroused wide interest among dealers and trade association secretaries throughout the country. It presents the machinery of dealer co-operation to establish definite values for used cars. It may be of assistance to groups of dealers aroused by the stories beginning on this page to seek co-operative means of cutting down used car losses. The Manual may be obtained for $2, the cost of compilation and publication, from the National Association of Automobile Show and Association Managers, 239 West 39th Street, New York.

Putting the Used Car Business on a Merchandising Basis

How a Dealers' Co-operative Plan Succeeded—How an Individual Dealer Can Prevent Losses

THE close of 1922 approaches with the used car question still raising its inquiring head in our midst. Dealers, many of them, are going to carry costly used car stocks over the winter. They are going to enter another spring of trading when winter is over. Are they going to enter it with any greater assurance of making rather than losing money on used car dealing than they entered the spring of 1922?

Motor World believes it is appropriate to present, as the year nears its close, the thoughts of two practical men in used car merchandising. What they have to say may help crystallize the thoughts of men in the trade going into the new year with determination to improve conditions surrounding the used car branches of their business.

On this and the following pages are presented the thoughts of L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, and B. B. Burns, president of the Illinois Automotive Trade Association and used car dealer of Decatur.

Sanders tells simply how the Boston plan, which already has been copied in such large cities as Philadelphia, Newark, N. J., Baltimore and Syracuse, brought about a $400,000 reduction in dealers' used car losses in ten months of this year, and how it accomplished even more than this in education of the trade itself to used car values and the fatal danger of ignoring them.

Burns sets forth plain, common sense fundamentals of handling the used car as an article of merchandise.

Motor World suggests that its readers study the thoughts of Sanders and Burns.

Ten Months of Used Car Co-operation in Boston

By L. B. Sanders
Secretary, Boston Used Car Statistical Bureau.

IN the late fall of 1921 conditions concerning used cars offered in trade, in volume and at what seemed to be unreasonable prices, assumed alarming proportions. A committee of the foremost dealers in Boston gave the matter serious and intensive thought, with the result that several conferences were held.

A questionnaire was sent to all dealers in Boston asking what their experience had been with used cars for the preceding 10 months. A tabulation of results showed a loss to these dealers of upward of $700,000, and as a result a permanent used car committee was appointed. This committee studied actual facts and conditions in the businesses of a number of the members of the dealers' association.

Various suggestions and plans were offered, with the final result that the Boston Used Car Statistical Bureau was organized and an outline of procedure was offered by the committee and was finally adopted. This outline briefly was as follows:

L. B. SANDERS

Based upon the experience of several of the largest and most successful dealers, a fixed percentage of depreciation was named for various makes of cars by years and models. These percentages were adopted for maximum allowances on cars taken in trade. It was arranged that weekly reports should be made by dealers to the bureau, showing allowances and selling prices, together with costs of repairs. The original purpose of these reports was to keep a check on allowances. The bureau, however, soon resolved itself into an educational organization. The weekly sales reports were tabulated, segregating different makes, yearly models and various types under one head. With the volume of sales reported from some 70 dealers, true values of various makes and models were being established. These values then were taken into consideration in revising depreciation figures originally stated by the individual dealers and in establishing a sound market report.

In following up sales reports there was revealed an astounding lack of confidence of one dealer in another. The committee also was startled at the lack of information some dealers had pertaining to their own businesses. There was an unwarranted amount of jealousy and a complete lack of co-operation among dealers' organizations and particularly among proprietors of various concerns. The buying public was taking advantage of the situation. Having determined the conditions the committee set out to correct them, as time went on with most gratifying results.

From the weekly sales reports bulletins were made up showing volume allowances. These were reduced to average allowances which could be used by dealers for purposes of comparison. Aver-

Digitized by Google

age repairs per car, year and model were determined for similar comparative purposes. These were again reduced to percentages for the benefit of the dealer.

In the operation of the co-operative plan dealers who never knew one another were put in touch over the telephone. General dealer meetings were called and business conditions discussed openly and frankly, with the result that a spirit of confidence and co-operation with one another was created, with most beneficial results. Sales managers and salesmen were handled in a similar manner and to the same good end.

The tabulations and educational work of the bureau continued. Our dealers began to realize there was a true value for a used car. They began to recognize the used car end of their business, not as an evil, but as a part of it and to be handled as intelligently as any other department. Many dealers to-day are eager to discuss their problems with their fellow dealers with a spirit of true confidence and co-operation never before enjoyed.

Boston Saves $400,000

As a result of this work, this co-operation, this education, the Boston dealers as a whole have saved themselves slightly under $400,000 in the 10 months since Feb. 1, the period the bureau has been in operation.

The dealers as a whole have a better standing financially and otherwise they are being recognized as merchants of the largest manufacturing industry in the world. Not only are they helping themselves. They are in turn helping the public to buy used cars at their true value. The value of this bureau to the public, the dealer and the manufacturer is beyond estimation because its results are accumulative.

In particular, our dealers have learned true values on used cars. They have realized there is a danger point beyond which they must not go. They must not buy a car purely upon competitive bidding or jealousy. They must merchandise used cars the same as they merchandise new cars.

Buying and Selling Used Cars as Merchandise

By B. B. Burns
President, Illinois Automotive Trade Association.

THE time is rapidly approaching, if it is not here already, when the automobile dealer is going to be compelled to conserve all of the commissions received on the sale of new cars. It makes no difference how many new cars a dealer sells, if he gives free service and makes poor deals in his trades, resulting in no profit, his volume of sales has been of no benefit. Two of these things can be easily eliminated; that is, free service and long trades.

It has been said by some people that there is no used car problem; that new car dealers should leave used cars alone. Well, here is your prospect, and he is the owner of a used car. He is not equipped to sell that car. You are the man that can equip yourself as the average dealer, to go out and sell this car and sell it as it should be sold. You cannot expect these owners to combine in an association to sell their used cars in order to buy new ones, so after you go through it all, we get back to the same problem. It is the new car dealer's problem to dispose of the used car.

How is the new car dealer going to dispose of these used cars profitably? He will have three principal things to contend with: first, procuring these used cars at the right prices; second, conditioning them as they should be conditioned before they are offered for sale; third, the proper method of selling them.

Procuring Used Cars

I will attempt to take up each one of these subjects separately. The first is procuring used cars. The average dealer who has not the advantage of an association plan is the one to whom I would suggest the following: First, that you have an association and get as many dealers as possible to agree at least to a maximum price that these cars should be taken in at. This could be arranged either by joint appraisal or by use of the Chicago Blue Book or by round-table conferences, or in any manner you think best suited to your community. Arrange for an every week meeting to try to educate the dealers of your town what used cars should be taken in at and the evils of taking them in at more than what they are worth.

B. B. BURNS

If a dealer has to go it alone, as most dealers do, he has to learn the proper price to take used cars in at and only take in those that he can procure at a proper price. He will miss some sales. A dealer will miss some sales occasionally because he doesn't want to take the paper that is offered to him. He should feel just as willing to let the other fellow have the car if the trade-in is too long. The principal thing in procuring your used cars, in my opinion, and the thing that has been overlooked by a lot of the dealers is that they do not sell the new car. You know in many cases the first thing that happens when a man drives up with a used car. He says: "I am figuring a little bit on buying a new car and I am somewhat interested in yours. I have a car here that I will have to trade in, however. What will you allow me for it?" And the dealer says: "Well, we will look at your car and see what we will allow for it." Now the prospect has never seen the new car and the whole discussion is on the used car.

Just the other day a friend of mine had a car that he wanted to trade in, and this fellow is a good, average dealer and the only thing he did was to try out the used car, and they tried to agree on a price. The man never saw the new car at all. I think the dealer should first sell his new car, whether he is able to deliver it or not, that makes no difference, but sell it and make it the car of the prospect's choice. If the long trade-in man gets it, the purchaser who has procured it on account of getting a long trade-in will tell all his friends and neighbors and acquaintances. "Yes, I am driving this car, but it is not the car that I wanted. The car I wanted I could not get. That fellow wouldn't give me enough for my car."

The thing to do with the prospect is to sell your new car, the service and the reputation behind it. The dealer of the future is going to be a man who will handle a good car for the class of customers that he seeks to sell, and he will make that car just as satisfactory to the buyer as it is possible for a car to be. He is going to give him transportation plus such comfort and style as this man wants, and he is going to give that to that man in a way that he is going to be pleased with it, and he must sell his man when he is selling his new car. I think that is one of the important things for the dealer to keep in mind.

Often in the sale of new cars long promises are made. The man who is selling the new car says, "You can drive this car a year, and you won't have much depreciation. You can drive this car a year and anybody will give you so much money for it." Now I think a man is courting trouble when he makes a promise of that kind, and I believe it is to the best interest of any man who intends to stay in the business to keep away from those promises. I do not believe that there is ever an instance where it is to the interest of any dealer to procure a used car at more than its actual value.

Not Necessary to Over-Allow

That has to be learned, what the actual value is, but you can get pretty close to it. I don't believe it is necessary to over-allow to introduce a new car in a community. The dealer cannot last if he takes in used cars at more than what they are worth. If a man is overloaded and overstocked on his new cars, I believe that any other method is better for him to get rid of them than to make long trades.

Now we will say that he has got his used car at a price that is right. He should recondition it. Gentlemen, I think there are two conditions there. A car is either junk and should be junked, or

Digitized by Google

else it is worth reconditioning and should be reconditioned. I do not believe it is good policy or good business to sell the car "as is" to a user. It is all right to sell them to used car dealers who may do as they please with them. You can sell them in any condition you want to, to them, but the car you sell to your users should be put in good, serviceable condition, because if you are going to make a success of your new car business and used car business in connection therewith, which is going to be as much a part of your new car business as any other thing, this used car must go out and it must be as represented. You say, how much must you recondition it? On the better grade of cars I should say it is possible to recondition them until a lot of them can be made to give the same service as a brand new car.

On some of the cheaper models, on some of the cars that have the lower list, it may not be advisable to recondition them so far as new tires are concerned; maybe so far as new fenders are concerned; maybe so far as seat covers or new upholstering are concerned, but it does pay to make sure that the car will give good, serviceable mechanical satisfaction. There are people who want to buy transportation regardless of looks or appearance just as cheap as they can get it and they can buy it in some of these cheaper cars, if you will put them in good mechanical condition.

Reconditioning Used Cars

There is one thing about conditioning cars that is a bugbear to the average dealer, I find, and I have had a lot of experience myself. I spent money before I did some of my own repairing, and I found that it is difficult in a lot of places to get away from the tinkering on cars, instead of getting to the actual reconditioning of them. When you tinker with a car it runs well for a little while, but you can't depend on it.

There is another thing about the reconditioning that I would like to call to your attention. If you have a reasonably good car of a high priced type, it oftentimes is money well spent to doll that car up. Put on side windshields, put on aluminum steps, put on Moto-Meters and your sunshades and things of that kind, and then you have a car that is similar in appearance to some of the late models and it will assist very materially in selling the car, because there is no man who objects, when he is buying a used car, when he sees the difference of appearance it makes in that car, to pay additional for these accessories, and the profit you make on those helps to take care of your overhead.

There is still another thing that I believe can be worked out with the average dealer in preparing his used cars for market. I believe it pays to make sport bodies, which can be done economically now. You can make a nice sport roadster out of some of these cars that look a little out of date when you take them in, or a nice four-passenger speedster, and that will assist materially in the sale of them.

The larger type, heavier cars are hardest to re-sell. The public is looking for economy. Some of them have a lot of service and transportation left in them, but it is hard to find a customer for them. Of course, there are taxicab drivers and liverymen who will take some of them. There is also a field for some of these cars to be converted into many-passenger buses. You have to make your market by advertising and by proper education, and I think you can make a market for cars of that type in that way.

Advertising the Used Car

After your car is conditioned, the important thing again is the selling of it. It seems to me that the selling of used cars has been the most abused of any feature of the automobile business.

One of the things that is necessary in selling your new cars, as you realize, is advertising. Millions are spent every year on advertising of new cars. There is a lot of money spent on advertising the used cars, but most of it is set in fine type. You have a used car for sale, not saying much about it, and if you do say anything about it, the principal thing is why you want to sell it, but you don't say why it is a good buy. That is the case, as I have noticed in times innumerable.

Now it seems to me if the used car business is going to be half of your business, the morale of used cars should be raised.

I believe there should be a consistent effort on the part of all dealers to educate the public that a used car has good value. It has good service and satisfaction if it goes through the proper reconstruction and you get it from the right place. The fact that a car changes ownership is not sufficient reason why it should be heavily depreciated in value. If a car is run a week and you attempt to sell that car, and it might be driven by the most careful driver, the public expects to buy it at a big discount, and I think that can be eliminated to a large extent, and I believe it should. Salesmen drive them for months and sell them for new, but if an owner drives a car for a week and then sells the car, you have to sell it at a big discount.

The morale should be raised and the people educated that all used cars will not give trouble.

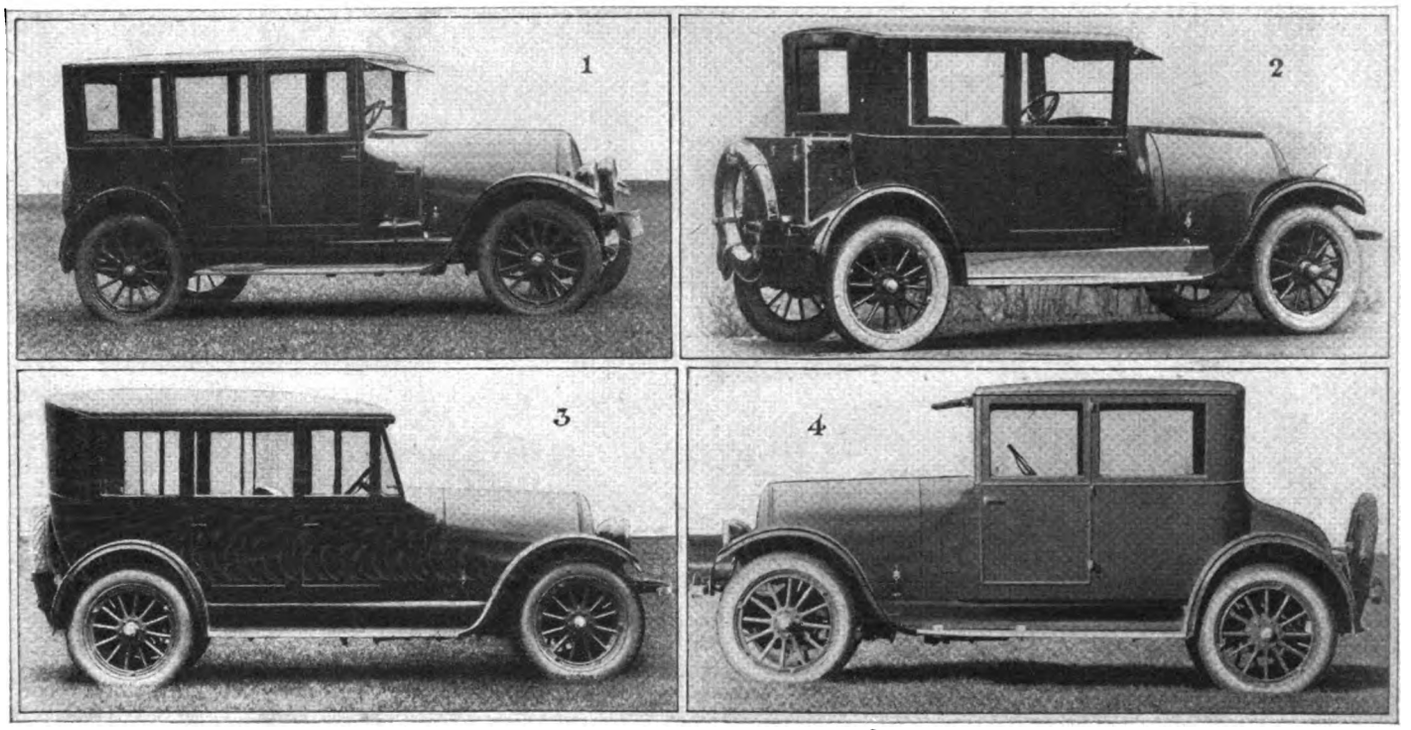
What About Display?

Some dealers in selling used cars say, "We are overstocked. We are housecleaning. We need the money. Bargains in used cars." That is a thing we should get away from. I don't think there is hardly ever an occasion when it is to the interest of the dealer to advertise that he is forced to sell used cars.

Then there is display. The used car is half your business, and maybe it is going to be the most important half. Why shouldn't you give that car the same display and the same attention as you do your new cars, and why shouldn't you give the man who comes in to look at a used car just as much consideration as the man who comes in to look at a new car? I have oftentimes heard a prospect say, "I am looking around to buy a car," and the salesman say, "Here are our models." "No, I can't go that high. I want a used car." Then they call in some shop man and take him back and show him a used car and expect to sell him that used car. That is not right; it is not fair; it is not profitable, and it won't succeed.

There is one feature that most of all the new car men will fight shy of, and it is the average dealer I am speaking of, and that is the guaranteeing of used cars. He hasn't any confidence in them himself. In the first place, I believe he must get confidence in those used cars himself before he can sell them successfully, and if he gets confidence in them, if his shop is all right, and if the cars get the conditioning they should have, I believe it is to his best interests to put a guarantee on those used cars, because if a car is thoroughly gone over, it is safe to guarantee that used car. But you will have to have a good salesman sell it. Don't let your shop man try to sell it. He is not educated in selling. He thinks that the best way to sell the car is to tell the man what he wants to hear and make him long promises. He says, "Yes, everything is guaranteed on it," and he sells the car. Have a successful salesman sell these used cars understandingly. He can sell them so the guarantee won't do you any harm. He can sell a used car so that the car will give the buyer absolute satisfaction and make him a permanent customer of yours, and possibly in the future he may be able to buy one of your new cars, but at all times, he will be a booster for you.

Good Sales Plan Brings Profits



The used car field offers an opportunity that I believe has been overlooked by the average dealer, in the high priced cars especially. The used cars that the average dealer has in his place of business make it possible for him to approach not just 10 per cent more customers, or 20 per cent more customers, or 30 per cent more customers, but possibly 150 or 200 or 300 per cent more customers, and that, after all, is the thing that you want. You want to add to your family of customers; you want to add just as many as you can, and this used car proposition offers you an opportunity to add those customers to your list.

I believe that a dealer should accept only what new cars he can handle. I don't believe a dealer is justified in allowing a manufacturer to overstock him on cars, and I don't believe the manufacturer is profiting by shoving on to the dealer any more cars than he can handle. I believe that any manufacturer who attempts to do that is making a mistake, and if I were a dealer I would refuse to accept more cars than I could merchandise as they should be merchandised. I believe that any dealer who will accept only as many new cars as he can handle and accept only used cars that he can get at the right price and sell them to give service, will find that the used car menace is not a menace after all, but is an asset to his business.

Seven New Bodies for Franklin Chassis

Four Door Sedan with Straight Windshield a New Addition to Line —Bodies Are Longer, Lower and Have More Room

Four of the New Franklin Bodies on the Series 10 Chassis

1—The four-door sedan which is the latest addition to the line. 2—The brougham is finished in royal blue. 3—The demi-sedan is lower and wider and looks larger than before. 4—The coupe is longer, wider and the rear hamper changed

THE Franklin line for 1923 will consist of the Series 10 chassis which was brought out this fall fitted with a choice of seven new bodies. These new designs have lower top lines, increased length and are wider above the body rail. These changes in construction have made it possible to provide roomier bodies. The lines of the higher hood are carried back from the almost vertical grille to the flare of the cowl where they blend smoothly into the body lines. The level of the hood line and the body rail presents an unbroken and continuous sweep from tip to tip, an effect which accentuates the increased length of the car.

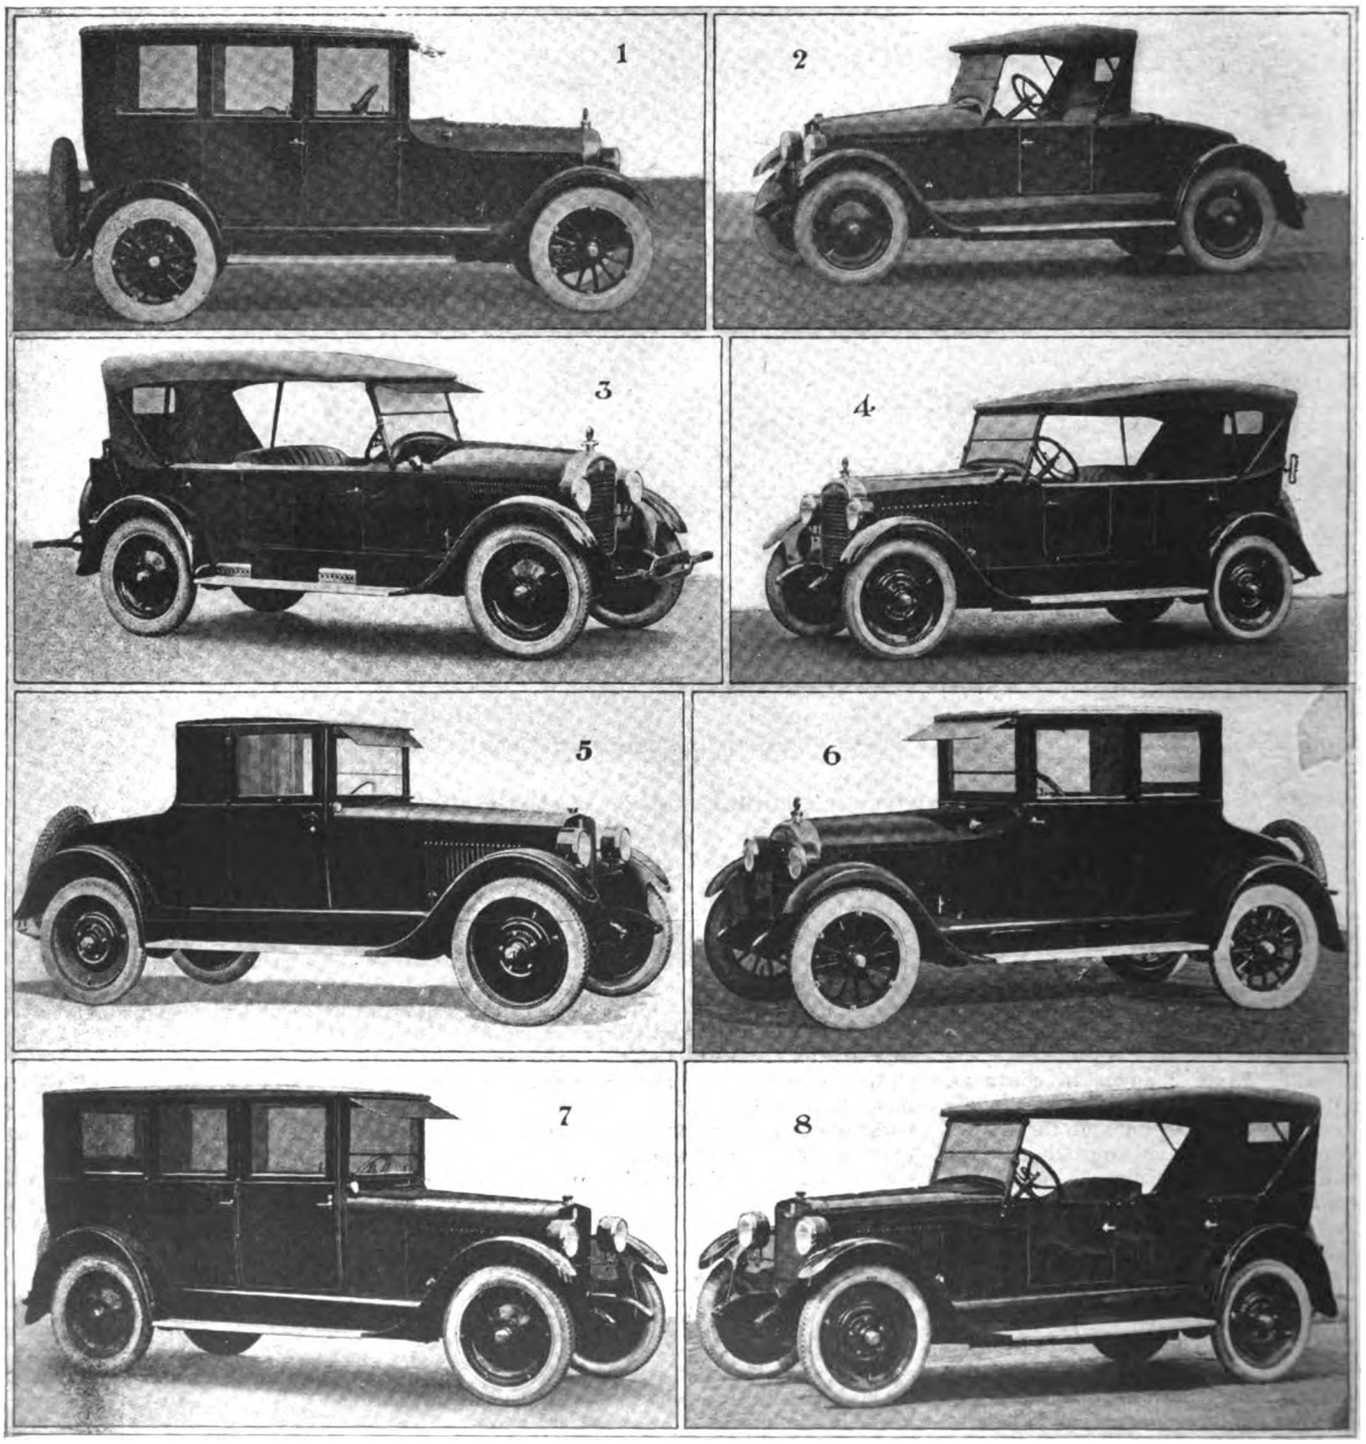
The driving compartment is more roomy due to the compactness of the engine and the additional length of the new bodies. More space is obtained in the tonneau also. The position of the seats is lower and at a more restful angle. The steering post is inclined a little more to suit the lowered seats.

Of the seven new body models, six will be closed, the only open model being the phaeton. The newest type is the sedan with four doors and a straight type windshield. The rear compartment is quite roomy and the space for luggage is ample. A gain in room in the front seat has been obtained by building it straight across and making it lower, wider and set at an angle which allows ease of driving and comfort for the passenger.

The exterior of the brougham is finished in Royal Blue. It carries five passengers and has two tilting seats in front and a low rear seat. Entrance and exit is made on either side through the wide doors and plenty of leg room is provided for both driver and passenger. A baggage trunk is attached to the rear and set off by nickeled trunk guards. The tire carrier is in back of the trunk.

The coupe has been improved by lowering and widening the body and changing the shape of the rear hamper. The increased length of the body has provided more leg room but the same intimacy is preserved in the seating arrangement.

The demi-sedan is smoother in line and more convenient than before. The roof is lower and wider and on the road the car looks larger from every angle. The glass side panels have been increased in area and the change of windshield design gives clear diagonal vision.



The changes in the phaeton are in the construction of the top which affords rear seat passengers an open view. The front seat is wider and there is more room both in the front and rear compartments. The low top and the merging of the body rail with the horizontal top line of the hood give the phaeton a more rakish appearance. Through an outward flare to the upper half of the windshield the oblique vision of the driver is much improved and easier driving under storm conditions is possible. The windshield is of the lap over type with rain gutters at the sides, very narrow corner pillars and an improved rubber strip which makes it weather tight.

The touring-limousine has a sliding glass partition which makes it convertible from a chauffeur-driven to an owner-driven car. The weight is little more than 2900 lb.

The arrangement of the new instrument board is quite simple. The lighting and ignition controls, battery indicator and spark advance and speedometer and clock are grouped in three rectangular panels. The mountings and fittings are all Roman in character, being edged with polished Duralumin and inlaid with black pyralin enamel.

Columbia Light Six and Elite Models for 1923

THREE new body types, a two-passenger coupe, a special sport phaeton and a sport roadster are included in the light six line and the phaeton and sedan on the same chassis have been refined. The Elite models remain as before with minor refinements. In the above illustration, 1 is the Elite sedan, $1,995. 2—Light six sport roadster, $995. 3—Special sport phaeton, $1,395. 4—Light six phaeton, $1,095. 5—Light six two-passenger coupe, $1,235. 6—Elite coupe, $1,925. 7—Light six sedan, $1,395. 8—Light six phaeton, $985. In the light six line the phaeton has been made slightly larger and the sedan is set lower in the chassis. A cowl ventilator and parking lamp have been added. The coupe is finished in blue with black hood and fenders. The sport roadster is of the racy type finished in red. It has a sloping rear deck with flush spare tires. The Columbia chassis specifications remain unchanged

Rickenbacker Series B Cars for 1923

Rickenbacker 1923 Models Have Changes in Both Body and Chassis—Disk Clutch Now Used

A NUMBER of detailed changes have been made in the new Series B Rickenbacker cars which are just coming off the assembly line at the factory. A few changes were also made on the Series A cars in the latter part of the run. The Series B cars will be shown at New York and Chicago with all these changes.

Probably the most important change made in the car this season is the adoption of an entirely new clutch. This is a disk unit which is designed along conventional lines except that the pressure plate forms one abutment for the springs and a movable part forms the second abutment. The movable part is connected to the pressure plate by linkages which provide a 4 to 1 leverage between the springs and the pressure plate. Inasmuch as the initial pressure is also present and the springs act on the pressure plate at the same time, a pressure of five times the actual spring tension is available. In other words, with three 110-lb. springs as now used a pressure on the friction rings of 1650 lb. is secured.

The new type disk clutch used on all series B Rickenbacker cars

Rings Interchangeable

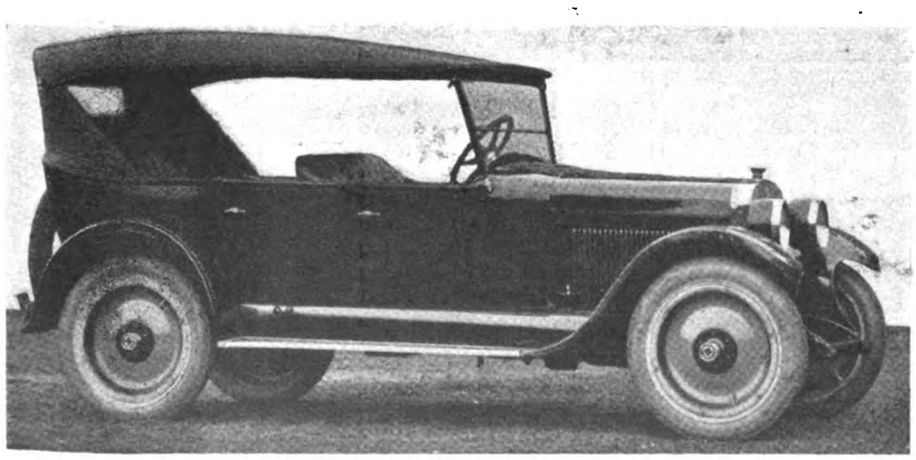
The friction rings are interchangeable with the conventional disk clutch. A second feature is that the pressure plate is positively disengaged from the friction rings instead of being allowed to float. The driven plate has straight arms and therefore has the advantage of lightness. The revolving weight, therefore, is kept at a minimum.

The only change in the powerplant is in connection with the carbureter, which has been equipped with a new type, hot-air stove and an air cleaner as standard equipment. A claim of an increase in from 2 to 5 per cent on the dynamometer in actual horsepower is made for the new construction. The air cleaner, which will now be fitted as standard equipment, is an air velocity type designed to remove the particles of foreign matter from the air taken through the carbureter into the engine. This is the second make of American car to adopt a cleaner as standard equipment.

Bosch electrical equipment is used on the new car. The automatic advance feature is incorporated in the distributor head and is so constructed that the weights employed are heavy enough to break loose a gummed bearing in case of heavy oil.

Changes in the Rickenbacker Cars

New type disk clutch
New type carbureter hot air stove
Carbureter air cleaner
Bosch electrical equipment
Brake anti-rattlers
Differential type brake equalizers
Wiring changes to conform to Class A specifications
Aluminum toe boards
Heaters in closed cars
Permanent tops on phaetons
Nickeled radiators on phaetons



Chassis Changes

A number of detail improvements have been made through the chassis and body, the rear axle, for instance, having been equipped with brake anti-rattlers. Flat springs have been added to the top and bottom of the brake bands with supporting members riveted to the brake dust cover as an anti-rattle feature. These also hold the bands free in the drum, helping to eliminate brake drag, particularly when the bands have been damaged by a blow. A differential type of brake equalizer with small differential wheels in place of the usual balanced lever has been added.

In the body construction, trim and equipment, a number of improvements are incorporated in the Series B cars. The phaetons are now equipped with permanent tops which are lighter and stronger. Although the tops cannot be lowered, the viewpoint of the Rickenbacker company on this is that since 99 per cent of the drivers never use the drop feature, there is not much use in using it.

Changes in the wiring have been made

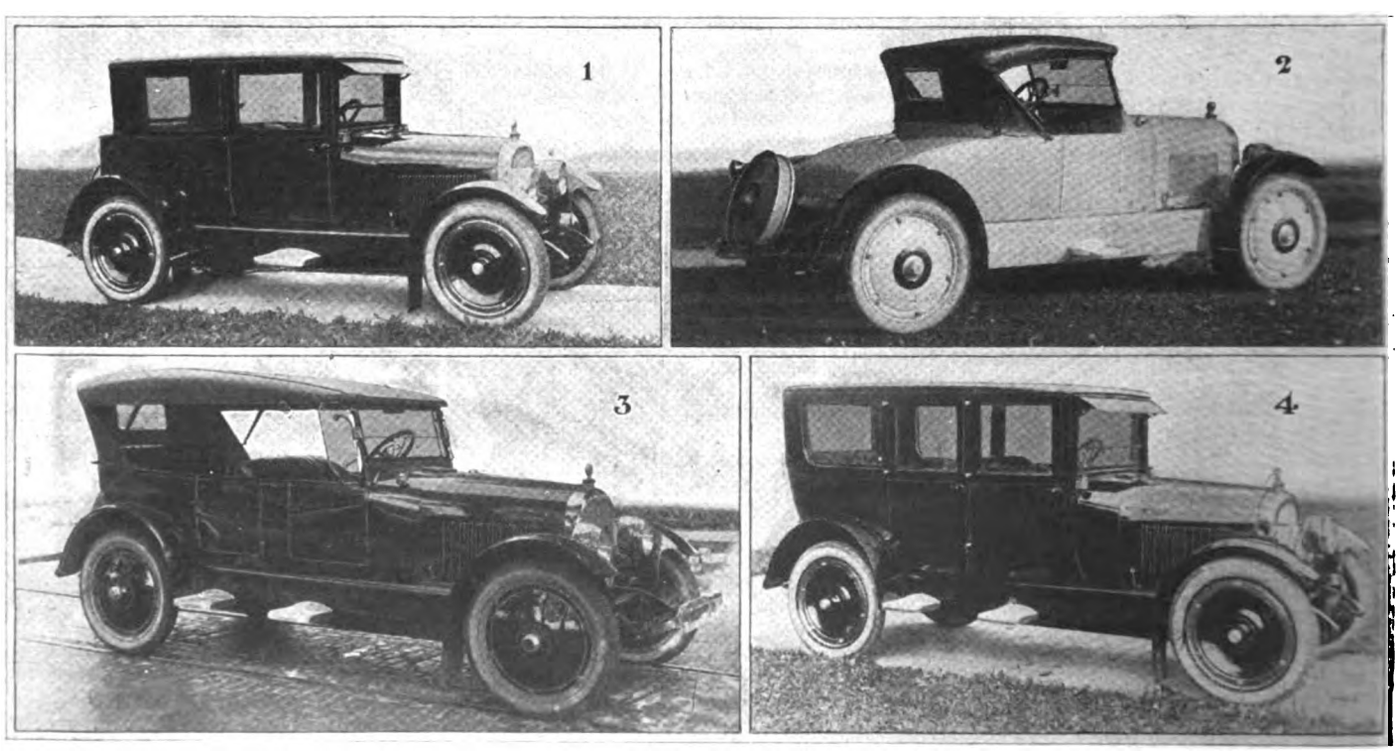
New Courier Car Will Have One Standard Chassis

Nine Standard Bodies Fitted—Exclusive Courier Features Used on Standard Units

A SINGLE standard chassis will be turned out by the Courier Motors Co., Sandusky, Ohio, this to be fitted with nine different body styles. The company is now in moderate production and has been shipping cars to its dealers for some little time. The chassis is assembled from standard units in the Sandusky shops and the bodies are built there, too. Incorporated in the design of some of the standard units are features of exclusive Courier design.

The 116-in. wheelbase chassis incorporates a Falls model T-8000, six-cylinder valve-in-head engine which is a stock product, with the exception of the fitting of a dry sump oiling system for which some exceptional oil economy claims are made. A bore and stroke of 3⅛ by 4¼ in. give a displacement of 195.6 cu. in. and a horsepower formula rating of 23.44. The engine is claimed to develop 46 hp. on the block at 2600 r.p.m. The five-passenger car weighs 2825 lb., ready for the road, giving approximately 62½ lb. of car weight for each horsepower. With a standard rear axle ratio of 5 to 1 and an optional ratio of 4.6 to 1, a speed range of from 2 to well over 60 miles per hour is developed. This is with a 32 by 4-in. tire.



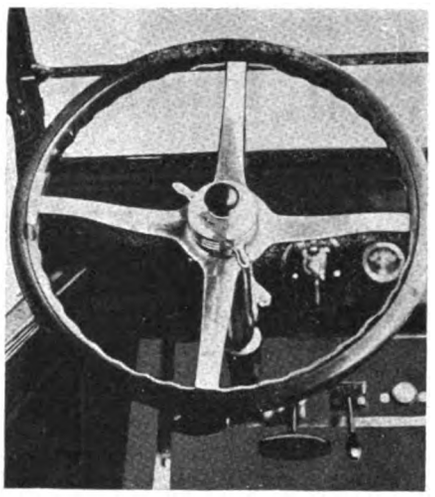
Courier Specifications

Bodies and Prices—
5 *Pass. Phaeton,* $1,395.
3 *Pass. Roadster,* $1,295.
3 *Pass. Sport Roadster,* $1,395.
3 *Pass. Coupe,* $1,965.
5 *Pass. De Luxe Sedan,* $2,165.
4 *Pass. Sport,* $1,495.
5 *Pass. Sport Phaeton,* $1.475.
5 *Pass. Two Door Sedan,* $1,995.
Special Sedan, $1,850.
Engine—Falls 6 Cylinder, 3⅛ x 4¼
Ignition—Atwater-Kent.
Starting and Lighting—Westinghouse.
Clutch—Borg & Beck.
Gearset—Muncie.
Chassis Lubrication—Kellogg.

One of the noteworthy features of the engine is the complete oil circulating system through the overhead rocker arms and through the drilled push rods back to the cam faces, giving a very complete lubricating system for the overhead valve action. This has been retained in connection with the dry sump lubrication. This lubricating system, which is familiar in airplane practice, is so arranged that the oil, instead of being carried in the engine base, is stored in a separate tank mounted on the frame and cooled by the forward motion of the car. The air is deflected by the front fenders against the oil tank. From this point, the oil is pumped to the bearing surface and returns to the crankcase from which it is pumped back to the tank where it is screened, cooled and again circulated through the engine. The installation has been made on the Falls engine by installing a double oil pump in place of the single pump and by mounting the oil tank as described with the necessary oil leads.

The pressure relief valve, which is carried in an accessible position on the engine, is so arranged that the pressure is taken after the oil has passed through

Four of the Nine Courier Bodies for 1923



1—*The five-passenger two-door sedan,* $1,995. 2—*The three-passenger sport roadster,* $1,395. 3—*The five-passenger sport phaeton,* $1,475. 4—*The De Luxe Sedan,* $2,165

Digitized by Google

the engine instead of before. The pressure is held at a fairly constant point of 30 lb. to the sq. in. To secure the high pressure which could be set to run up as high as 75 lb., a very close fitting gear pump is employed. The pump drive is the same as on the Falls engine, the additional pump simply being super-imposed on the original pump.

Another deviation from the standard Falls engine is the employment of cast covers for the top and for the valve action. On the standard engines, stampings are employed, but the castings have been substituted for greater rigidity, so as not to be distorted by unusual tightness on the retaining screws. Gasoline is supplied from a 12 gal. tank in the rear of the chassis through a Stewart vacuum system to a Stromberg carbureter. Ignition is by the Atwater-Kent system and the starting and lighting system is a Westinghouse. The battery is a USL 6-volt, 94 amp. type mounted in a steel cradle under the front floor boards.

The clutch is a 10 in. Borg & Beck single dry-plate type, delivering the drive through a Muncie three-speed gearset mounted in unit with the power plant. This gearset is mounted on annular ball bearings throughout. The drive is a Hotchkiss type through two 6½-in. flexible disk universal joints. The rear axle is a Columbia three-quarter floating type mounted on annular ball bearings. The front axle is a Peru, drop-forged, I-beam, with a 2¼ by 1½ in. I-beam section. The steering gear is a Lavine, irreversible worm and wheel type with an 18 in. hard rubber steering wheel designed particularly for this car. It is a thin grip type with the Lavine center control in which the spark and throttle levers are mounted on the steering wheel hub.

The steering wheel of the Courier has short spark and throttle levers and the horn button mounted on top

The pressed steel, channel section frame is 7 in. deep at the center, with 1½-in. flanges, and the stock is ⅛ in. in thickness. The cross members consist of three pressed steel channel units and two reinforcement tubes, the rear tube being 3 in. and the front 2 in. in diameter. These are mounted in sockets bolted to the frame, and as a measure of rigidity it may be mentioned that a rear corner of the frame can only be lifted a little over ½ in. before picking up the entire frame, this representing the distortion, due to the weight of the frame supported in this manner.

Semi-elliptic spring suspension is employed, the front having an alloy steel main leaf and high carbon steel used for the remaining leaves. The length of the front spring is 36⅜ in. and the width 1¾ in. The rear spring is chrome vanadium steel throughout, 53 in. in length and 2¼ in. in width. The wheels are artillery on all standard models with Stanweld rims. Forsythe disk wheels or wire wheels are standard on the sport model. The tires are 32 by 4 in. nonskid cord, front and rear.

The Kellogg automatic chassis lubrication system is installed, this being operated from a central tank located on the front of the dash, with a plunger so constructed that one push after the system has been filled will force lubricant to the various parts of the chassis under pressure. With the use of the flexible disk universals, the usual grease cups have practically been eliminated.

All of the body work is handled in the Courier plant, which is equipped with a complete wood-working and paneling department. The colors supplied are Baltic green, maroon, azure blue, moleskin and dark blue. The upholstery on the open cars is real leather with Spanish finish throughout. On the enclosed cars, imported fabrics are employed. The bodies are practically custom built, as with the limited production, the body manufacture is entirely by hand work.

A feature of the policy of the Courier concern is to give each car a thorough road tuning before shipment. From 3 to 5 hours are spent on each car by the inspectors before they are passed and an endeavor is being made for uniformity as regards carbureter and ignition setting, as well as providing a very thorough rattle inspection. The standard equipment includes spare rim, tool kit, jack, tire repair kit, starting crank, rim wrench, switch keys, curtain rods, windshield wiper and spot light on the sport models.

Gramm-Pioneer Trucks Have Minor Chassis Changes

A NUMBER of changes have been made in several of the Gramm-Pioneer truck models, which, while of a minor nature, incorporate up-to-date features.

The Model 10 speed truck which has for the past three years been powered with a 3½ x 5 in. engine will now be fitted with the new Lycoming 3¾ x 5 in. engine. This engine has a five-bearing crankshaft, full force feed oiling to all bearings through drilled crankshaft by means of a gear driven oil pump, removable head, hot spot manifold, high sight oil gage, etc. To prevent damage to parts due to the universal tendency to overloading, the rear axle has been increased in size in such parts as the bevel gear, pinion, differential, carrier and bearings and an additional annular bearing has been located at the lower or bevel end of the pinion to assist in taking care of service strains.

The Model 65, 1½-2 ton worm drive model which was formerly powered with a Continental Red Seal Model N engine is now fitted with the new Model J-4 engine of the same make and size but with all the latest improvements of drilled crankshaft, gear driven oil pump, force feed oiling and hot spot manifold. While this model will continue to be built with the North East generator and distributor ignition from an Exide heavy duty truck type battery, it will also be furnished with Eisemann high tension magneto ignition in connection with electric lights and horn as an extra. The emergency brake which formerly operated on the rear brake drums is now of the ventilated shoe type and operates on the front end of the propeller shaft. This gives double the braking surface on the rear wheel drums for the service brakes.

Model 20, 2-2½ ton worm drive will have a Continental Red Seal K-4 instead of the C-2. This is the same size but has a number of improvements. The North East system will be continued on this model also, but an option of Eisemann magneto with electric lights and horn is to be had at an extra price. The emergency brake will also be changed from the rear wheels to the propeller shaft. The frame dimensions have been increased to 6 x 2½ x ¼ to take care of the increased demand for the chassis with dump bodies. The front end will also be fitted with an integral type channel bumper.

Rickenbacker Series B Cars for 1923

(*Continued from page* 19)

so as to secure the Class A rating as regards fire hazards from the Underwriters' Laboratory. An approved transmission lock has also been built into the transmission pedestal which will also reduce the insurance rates. All nuts, bolts, screws and other parts which have previously been touched up after assembly, are now rust-proofed, giving them a finish which does not require touching up and consequently daubing of other parts. The toe-boards on all of the models have been changed to aluminum for appearance and to protect the front compartment from heat coming from below as an asbestos installation has been incorporated in the toe-board. All the molding used on the phaetons is of cold drawn metal stamped to shape and enameled, giving a mahogany finish. Rear view mirrors have been added to all the cars as regular equipment and all of the closed models are now fitted with Perfection heaters as standard equipment. The radiator shell on the phaeton has been changed to nickel plate for the sake of appearance.

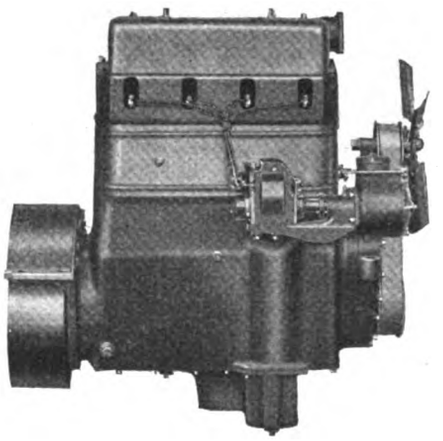
New International Tractor Has Gear Drive



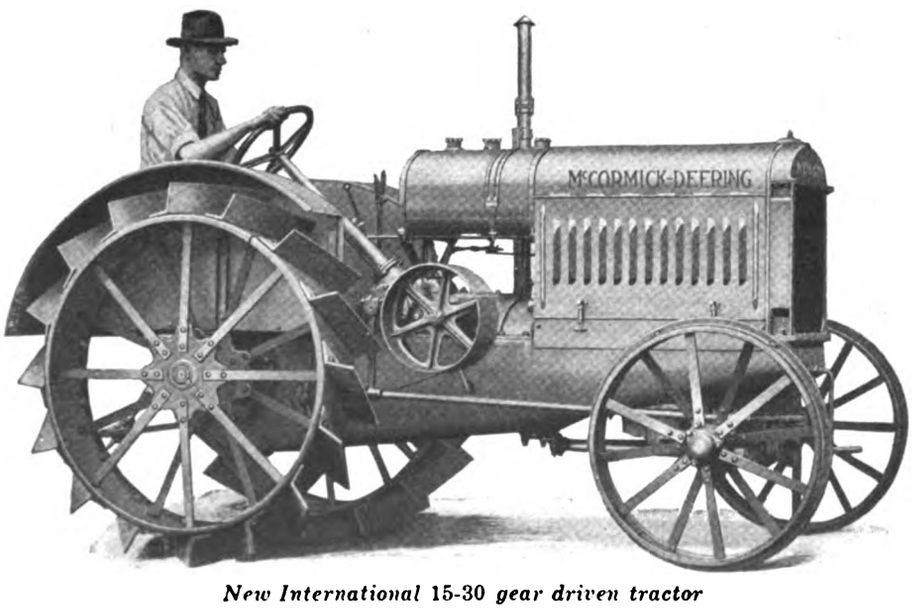
Rated at 15-30 Horsepower—All Working Parts Are Enclosed—Accessibility a Feature

A NEW tractor, to be known as the McCormick-Deering 15-30, is now being produced by the International Harvester Co. It is of the one-piece, cast frame type, and has a live rear axle and an automobile type front axle. The complete enclosure of all working parts and the accessibility of the various units are features of the construction.

The frame of the new tractor consists of one solid casting running from front axle to rear axle. There are no joints which might leak oil and no frame bolts or rivets to work loose. The frame forms a foundation for the engine, an inclosure for the clutch, a dust and oil tight housing for the entire working mechanism of the tractor and provides the necessary compartments so that all gears run in oil. The gearset, the clutch, the axle gears and belt pulley drive can be taken out easily without disturbing, except in a minor way, adjacent units. Furthermore, the various parts can be removed and dismantled with the minimum expenditure of time.

The wheelbase of the new tractor is 85 in. and the tread at the rear wheel 153 in. The length is 133 in., the width 65 in. and the height, 61 in. The turning radius is 15 ft. The gearset provides three speeds forward and one reverse. The normal pulley speed is 595 r.p.m.

The engine is a four-cylinder overhead valve type with 4½ in. bore and 6 in. stroke. Among the unusual features of the engine is a two-bearing crankshaft and a main casting carrying the removable cylinder sleeves. The crankshaft is supported in two large annular ball bearings. The connecting rods may be inspected by removing hand hole covers at the side of the case and are easily adjusted after removing the crankcase pan. The cylinder head is detachable. Lubrication is by splash, the oil being raised from the sump to the oil pan by a gear pump driven by a vertical shaft off the camshaft. Ignition is by a high tension magneto with impulse starter. A centrifugal throttling type governor is employed.



Right side of engine used in new International 15-30 *tractor*

The clutch is of the multiple dry disk type, driven by pins bolted to the flywheel flange. The belt pulley assembly is a separate unit and is driven by bevel gears from the upper shaft of the gearset.

Just aft of the change speed gear, mounted in the main frame casting and driven by a beveled pinion and ring gear from the lower shaft of the gearset, is the bull pinion shaft. This is a short heavy shaft and is mounted in roller bearings. The bull gear and differential are mounted in the main frame casting and tubular extension attached to it. The differential housing and rear axle are carried on roller bearings. All gears in the entire transmission are of steel, carbonized and hardened.

The tractor is designed to receive a special power take-off, driven from the engine through the transmission. This take-off terminates in the shaft carried in the upper half of the differential casing, and is made accessible by removing a small end cover. This is a special feature which can be readily attached and is expected to find many uses for driving parts of trailing machines of the same general character as those which are now frequently drawn by tractors, but which are, at the present time, generally operated through power taken from driving wheels in contact with the ground. Other accessories such as power winches can also be driven from this take-off. An adjustable drawbar is attached to the main frame and axle housing.

New International 15-30 *gear driven tractor*

Book Review

The Automobile Storage Battery—Its Care and Repair; published by the American Bureau of Engineering, 2632 Prairie Avenue, Chicago.

The fourth edition of this book is now ready for distribution. It has been enlarged, revised and improved. It is intended primarily for the use of persons engaged in the business of battery maintenance. It deals with farm lighting and radio batteries, as well as with the automobile type. There are 515 pages of text with 332 illustrations. In addition there is a pictorial section at the end of the book in which battery manufacture is illustrated.

The first chapter is of an introductory nature and deals with the development of the automobile electrical system. The second chapter explains the simple primary battery and discusses the construction and operation of the secondary or storage battery. The manufacture of the battery is described in the next chapter, and in the fourth chapter, the operation of the battery is explained from the chemical standpoint. Succeeding chapters discuss discharge, charge, and capacity, internal resistance, care of battery on car, troubles, shop equipment, general shop instructions, business methods, diagnosis, battery rebuilding, special instructions and farm lighting batteries.

The Care of Radiators in Winter

Preparations and Solutions to Prevent Freezing—Running the Engine Warmer—How Freezing Damages the Parts

THERE are three ways of preventing radiators from freezing. One is to keep the car in a heated garage, the second is to drain the water out each time after using the car, and the third is to use a solution that will not freeze down to the lowest temperatures ordinarily reached. The first method is seldom practical and the second entails a great amount of unnecessary labor.

There are a number of chemical solutions which when mixed with the water reduce the freezing point sufficiently to prevent freezing. One of the most commonly used and easily secured materials is alcohol. There are two kinds of alcohol commercially obtainable, wood and denatured or grain. The wood alcohol makes a solution with a low freezing point with the addition of less alcohol than the denatured but it evaporates more rapidly and costs more. Table 1 gives proportions to use to reduce the freezing point.

By using glycerine with the alcohol, a safer solution is produced as the glycerine does not evaporate, and even should it freeze, it forms snow like crystals which have not the expansive force of plain water. The glycerine, however, attacks rubber and at the end of the season the hose would have to be replaced. Table 2 shows various proportions of glycerine, and Table 3, proportions of glycerine and denatured alcohol.

In addition to these alcohol and glycerine solutions, there are a great number of patented compounds and solutions on the market which are quite suitable for winter use in the radiator, most of them having a calcium chloride base. This material will have practically no effect on the cylinders or radiator, but should not be used in engines that have aluminum in contact with the cooling water. The great advantage is that the solution does not evaporate like alcohol, and once placed in the radiator, can be forgotten till spring. Some of these compounds contain alcohol and glycerine, and these would need occasional replenishing with alcohol to maintain the strength.

Should a radiator be frozen, the best way to thaw it is to bring the car into a garage heated just above the freezing point, say 40 to 50 deg. The application of boiling water or anything very hot is likely to spring the seams wider open than they are. In many cases light freeze ups cause no damage. The radiator generally freezes first when a car is left standing, and it is not unusual in very severe weather for a radiator to freeze up while the car is running. This can be prevented by using a radiator cover. The use of steam from a hose has been found practical in thawing radiators. If the freezing has gone into the cylinder block and is frozen very solid, it is likely that the water jackets will be cracked.

In repairing a frozen radiator it should always be boiled out with a strong soda solution before testing and soldering as there are many little cracks that are filled with rust or compounds that do not show up till the radiator is put on the car again. This boiling will clean this much all out and show up every leak, no matter how small.

Better Mechanics

Article No. 271

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

New Westinghouse Manual

THE independent garage is an important factor in the maintenance of the electrical equipment on the automobile. There are large numbers of owners who are not conveniently located with respect to authorized electric service stations. When these owners have electrical trouble, they naturally turn to the man that they regularly patronize for maintenance work. If this man happens to be up on electrical work, they get good service.

The education of the independent garage man on the subject of maintenance of electrical equipment is consequently of major importance if owners are to get satisfaction from the electrical equipment on their cars. The garageman must know how to diagnose the trouble, how to fix it and where to get such replacement parts as are necessary. In an effort to supply the garageman with this sort of information, the Westinghouse Electric & Mfg. Co. has compiled the Westinghouse Automotive Electric Service Encyclopedia and Parts Data. Volume I is the Service Encyclopedia and Volume II is the Parts Data. The two volumes form just about the most useful compilation of service information that has come to our attention.

The volumes are in loose leaf form. Index tabs make it easier to use the books. The two volumes sell at $24. Volume I alone costs $12.50. For $2.50 yearly, the Westinghouse company supplies new pages carrying the latest information and data.

Volume I deals first with electrical fundamentals and with the various units that go to make up the electrical equipment on the motor car. Following this, there is a section devoted to the internal wiring diagrams of various types of equipment. The next section gives the wiring diagrams for Westinghouse equipped cars. Another section tells how to locate trouble. The following section gives detailed instructions for the construction of test equipment after which comes a section on test specifications. The last part of the book describes the Westinghouse equipment on various makes of cars more completely. This section is arranged alphabetically. Volume II gives the style number and price of every Westinghouse unit and each of its parts. It also tells how and where to order parts.

City Dealer's Map Shows Garages and Rates

Here's How a New York Dealer Answers the Prospects Who Say, "I Can't Afford High Storage Rates"

IF you sell cars in a big city, you have heard these objections before: "Storage rates are so high that I can't afford to keep a car," or "There is no convenient place for me to keep my car."

Probably you have lost sales because you have been unable to provide satisfactory answers to these objections.

The city man lives in an apartment or perhaps in a private house on a small piece of property. It is impossible for him to have his own garage. If he owns a car, he must hire storage space for it. Furthermore, if he lives at any considerable distance from the garage, car ownership becomes less attractive because of the inconvenience of getting to and from the garage. The cost of storing the car is especially important to the prospective purchaser of a low-priced car.

Sometimes the rates are prohibitively high and sometimes there is no garage within convenient distance. And sometimes these objections are fancied or are faked by the prospect to get rid of the salesman.

A New York City dealer encountered these objections so frequently that it was decided to find out just how real they were. Two men were detailed to the work of making a census of garages and garage rates. It took over two months to complete the job. A list of garages secured from the Garage Owners' Association was used as the basis of the census.

At the completion of the census, a large map of the city was secured, and colored pins were stuck in it to indicate the location of garages in the city. A green pin indicates a garage where his car will be stored for $15 or less a month. A blue pin represents a garage offering owners storage at from $15 to $20. A red pin is for garages charging over $20 for storage.

The census showed that there were 136 garages that would store his car for a monthly rate of $15 or less. There were 58 garages in the $15-$20 class, and 120 in the over $20 class. A list has also been made classifying the garages in the three rate classes and giving the addresses and exact rates of each.

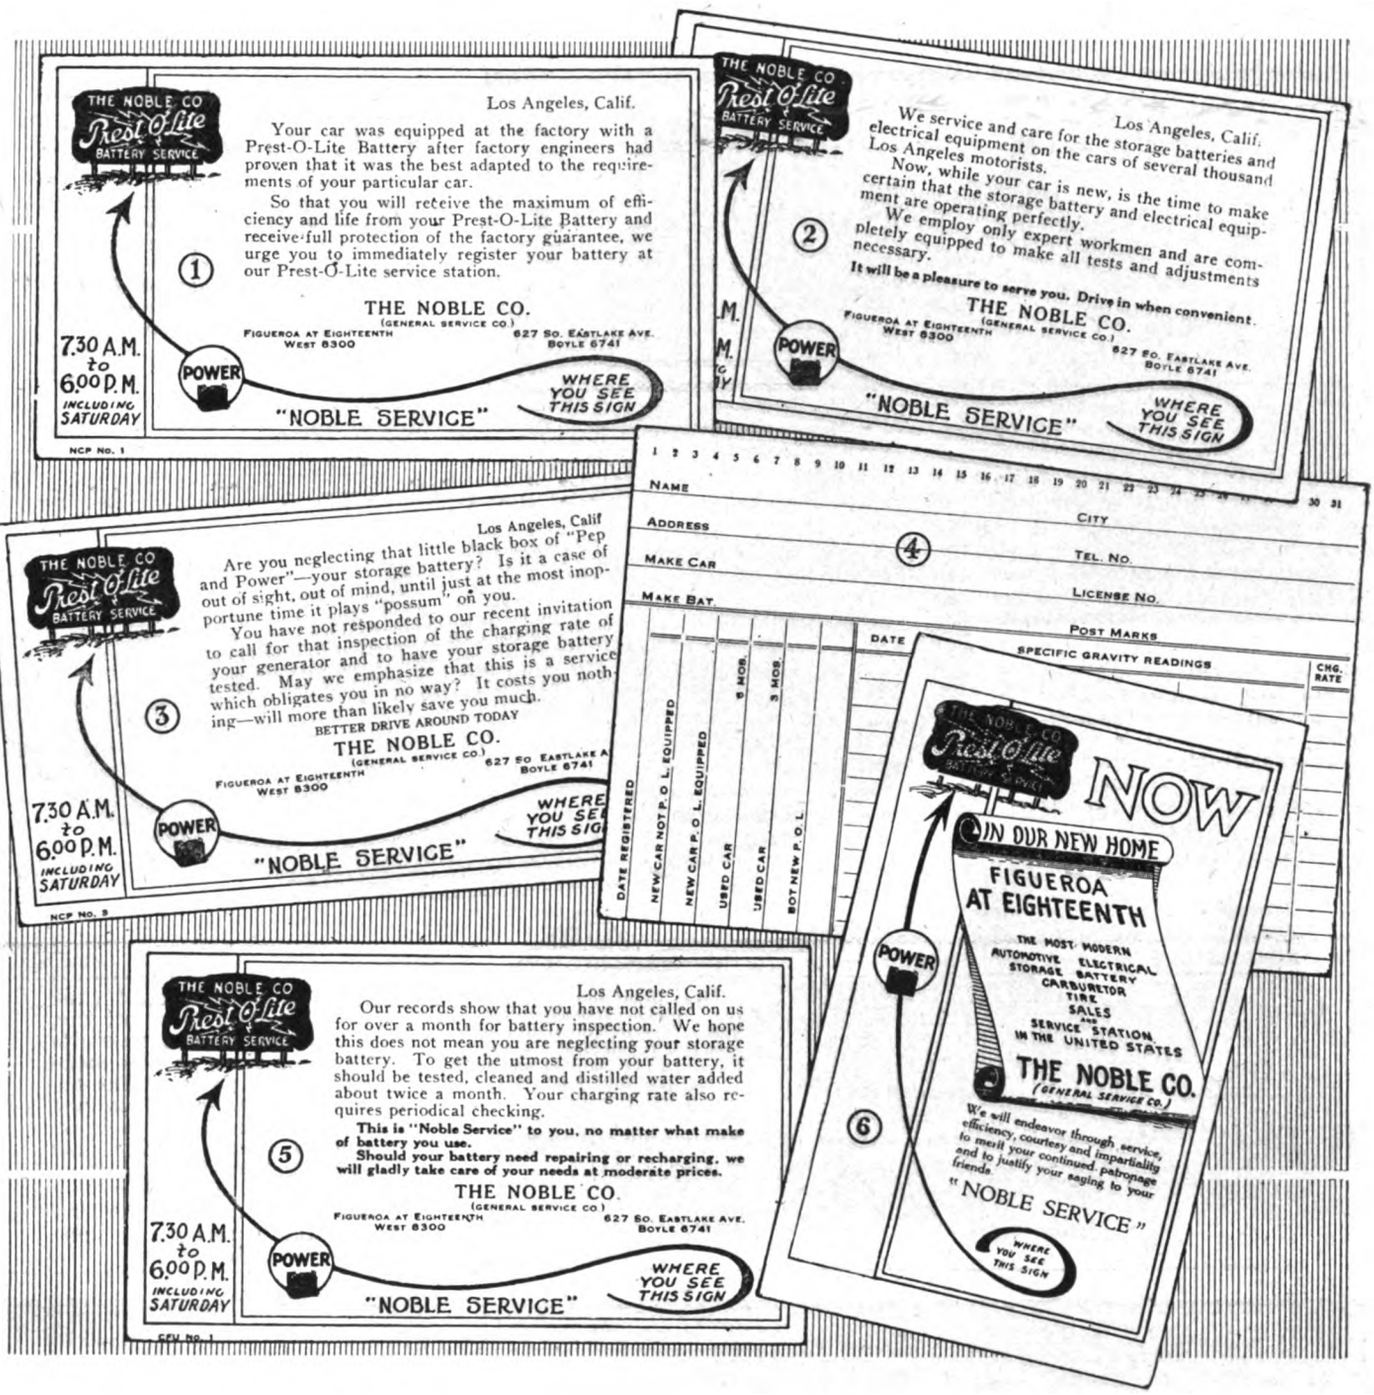
When a prospect offers high storage rates or inconvenience of garage location as a reason for not buying, the salesman can quickly determine whether his objections are real or imaginary. The garage census indicates the rates charged for storage by the garages in the prospect's vicinity, and the map visualizes the distance of these garages from the prospect's home.

In certain sections of the city there are no garages offering rates sufficiently low to appeal to the average small car owner. For example, that section of New York west of Central Park has no garages with rates as low as $20. This section is peopled largely by persons of wealth, however, to whom high garage rates would not constitute an objection. In other sections of the city most of the garages offer small car storage at $15 or less a month.

Pictures of Business on Service Car

Two large photographs flanking the bodies of the service patrol cars of Harold L. Arnold, Hudson and Essex dealer in Los Angeles, extending from the guard rails to the height of the top covering the drivers' seats, not only add tremendously to the attractiveness of the vehicles but prove a great advertisement for the firm. The photographs show the building housing the various departments of the Arnold organization

Good Parts Stock a Source of Profit



FRED V. CLUTE, Chevrolet dealer at Cohoes, N. Y., specializes on parts. Not only does he carry a large stock to supply the demand for replacement on the hundreds of Chevrolet cars used in and around Cohoes, the owners of which have learned through experience that they always can get what they want immediately at Clute's, but he has developed a nice demand as a distributor of Chevrolet parts in the surrounding towns. He did this by making it a matter of custom and policy always to carry parts on hand. In stocking now he always stocks a surplus over his own probable requirements in order that the dealers in nearby towns may be supplied. Like the Cohoes car owners, the dealers have discovered the advantage of ordering from a stock which is always complete and immediately available. They can get parts from Clute much quicker than they can get them from the Chevrolet factory. Clute's parts business amounts to more than $30,000 annually, and he says the profit he makes on it carries the entire overhead of his car business and shop.

Punctuality Important to Success of Car Laundry

"YES, our business is growing," said the proprietor of a successful middle western car laundry, "and the reason it is growing is that we keep our promises. When we say we'll have a car ready for a man at 2 o'clock we have it ready at that hour and not fifteen minutes later. I personally don't believe there's any one thing which makes such a big hit with motorists as this thing of keeping promises and we have been able to trace a lot of new business to the splendid reputation given us by former customers who have praised us to new people."

Mail Follow-Up Gets Electric Service Work

THE Noble Co. of Los Angeles employs an intensive system of cultivating prospects and in following up old customers.

A list of new car purchasers is received each morning through co-operation with local car dealers and the names of those whose cars and trucks are Prest-O-Lite equipped are segregated. To these the Noble direct mail appeal is made in a series of post cards, some samples of which are shown above. The first card to be sent is marked "1." To those not equipped card "2" is sent.

The names and addresses of all owners to whom cards have been sent are typed on plain 4 x 6 slips, which are filed alphabetically. On the tenth and twenty-fifth of each month a clerk goes through the files and removes all slips and sends card "3" to those who did not respond to the first invitation.

If the prospect does not yield on receipt of the second card, the slip containing his name is destroyed. The Noble Company, while making a determined effort to obtain new customers direct, lays greatest stress in securing new prospects on satisfying old customers.

When a service record slip is received, the floor at the office revealing the name of a new customer, a card, "4," is made out with his name, address, make of car, make of battery, date of first specific gravity reading, charge rate, probable age of car, etc. The reverse side of the card provides for a record of specific gravity readings, dates, etc. Tabs of various colors, such as commonly used, are fastened to these cards in the files, and they come up at regular intervals. If a customer has not called at the service station during any month, card "3" is sent.

Various other forms and cards, such as "5" and "6," are used to draw the customers back to the establishment at regular intervals.

An Important Phase of Buying a Garage

Be Sure That the Man Who Assigns the Lease Has the Right to Do So

RECENTLY a local garageman came into my office and said he wanted to get back a thousand dollars deposit on his lease which was to expire in a few days. Sounds like a simple proposition—does it not—yet it was not at all a simple matter, for before the garageman actually got back the thousand dollar deposit, which he was entitled to, he had hundreds of dollars of expense—and I had all kinds of difficulties to overcome.

When this garageman had bought his garage he had gone to a lawyer who saw to it that he received a simple bill of sale for the purchase price he paid—and an assignment of the thousand dollar security on the lease in exchange for a good thousand dollars cash which he paid to the man who sold him the business.

At this point the lawyer stopped. The garageman had the business and so far as the man who sold him the business was concerned he had a good right to the thousand dollars security.

When we made a demand on the man who held the security, however, that it be turned over to my client we began to run into trouble. "I am ready and willing to turn over the security to your client," said this man, "but you must first show me he is entitled to it. The lease has been assigned so many times that I want to be sure I pay it to the right party so that after I have paid it some one else will not come along and make me pay it all over again." "Fair enough," I replied, "you are entitled to what you ask, I will get the proof and submit it to you." I did not know what I was promising to do.

When I asked my man for his papers he handed me the bill of sale he had received, an assignment of the original lease from the man who had sold him the business, and an assignment of that man's right to the security. When I asked him who had assigned to the man he had bought from he could not answer and he had no papers to show how often the lease or the right in the security had been assigned from the time the deposit had been made, to the time the lease and the right to the security came to him.

I started to investigate and after much work I found out the following facts. Originally the owner of the property had given a five year lease to one A. A had started in the garage business and after a while had sold out to B, assigning the original lease to him. In turn B sold out to a man named Piel, and likewise assigned the original lease to Piel. After about a year Piel decided to sell out. Now, Piel was a shrewd business man, and thinking the matter over he decided not to assign the original lease to the man who was anxious to buy, but to give him a sub-lease and in addition to compel him to put up security for the faithful performance of the covenants of the lease and the prompt payment of the rent. The buyer agreed to do this and actually did put up a thousand dollars security with Piel, although Piel was not the owner of the property but only a lessee himself.

Practical Questions of

Business Law

are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

The depositor of the thousand dollars finally decided to sell out and actually did sell out to a partnership consisting of three men, giving them a bill of sale and an assignment to his rights in the thousand dollars deposit.

Down to this point everything was in order. Then the trouble began. The next paper our search disclosed was bill of sale from the partners to a corporation which they thereafter formed and which was subsequently dissolved, two of the partners getting out of the business and the third partner taking the whole business.

The two retiring partners, however, did not assign their share in the thousand dollars to the third partner but simply gave him a general release and turned their stock over to him when they retired. This was the missing assignment client's lawyer should have discovered when he bought the business. To make matters worse it now appeared that client and the man who had sold him the business who was likewise the remaining of the three partners were on bad terms. In addition client said he did not trust him. This made it impossible to go to him and get the missing assignment.

Piel still refused to give up the thousand dollars until assured that we would hold him harmless from all claims that might be made against him. In desperation I got in touch with a surety company and finally at an expense of over a hundred dollars I eventually got Piel to accept a surety company bond indemnifying him against all claims that might ever be made against him on account of the missing assignment—and client got the thousand dollars security which he was undoubtedly entitled to but which he could not show a clear title to.

When the whole matter was over I asked client what he had paid the lawyer who had represented him when he bought the business. He told me he had paid him five dollars for drawing the bill of sale and five dollars for drawing the assignment, but that he was sorry he had not gone to some other lawyer, even if he had had to pay a hundred dollars, to have the matter properly taken care of.

The lesson to garagemen in this little story is simply to see that the man who assigns a lease, or a right to a rent deposit to you when you buy a garage, has the right to do so. The only way to be safe is to have him produce and turn over to you a complete set of papers—the original lease and every assignment—from the original lessee—right down to the man who is attempting to sell to you.

A little care and trouble and you will save a lot of trouble and expense later on.

Part of Market Value Required in Breach of Contract Case

In a recent Texas case the court decided that in an action for breach of contract for the sale of automobiles proof of the market value of the cars must be shown by the buyer.

The court in this case also held that a dealer in personal property in a particular place is a competent expert witness as to the value of such personal property in that particular place, and that such a witness giving testimony as to the market value of the personal property may derive part of his information from the price list prepared and furnished and used by the manufacturer of the automobiles in the ordinary course of its business. Security Motor Co. vs. Chestnut, 224 Southwestern Reporter, page 385.

Repairshop Shortcuts

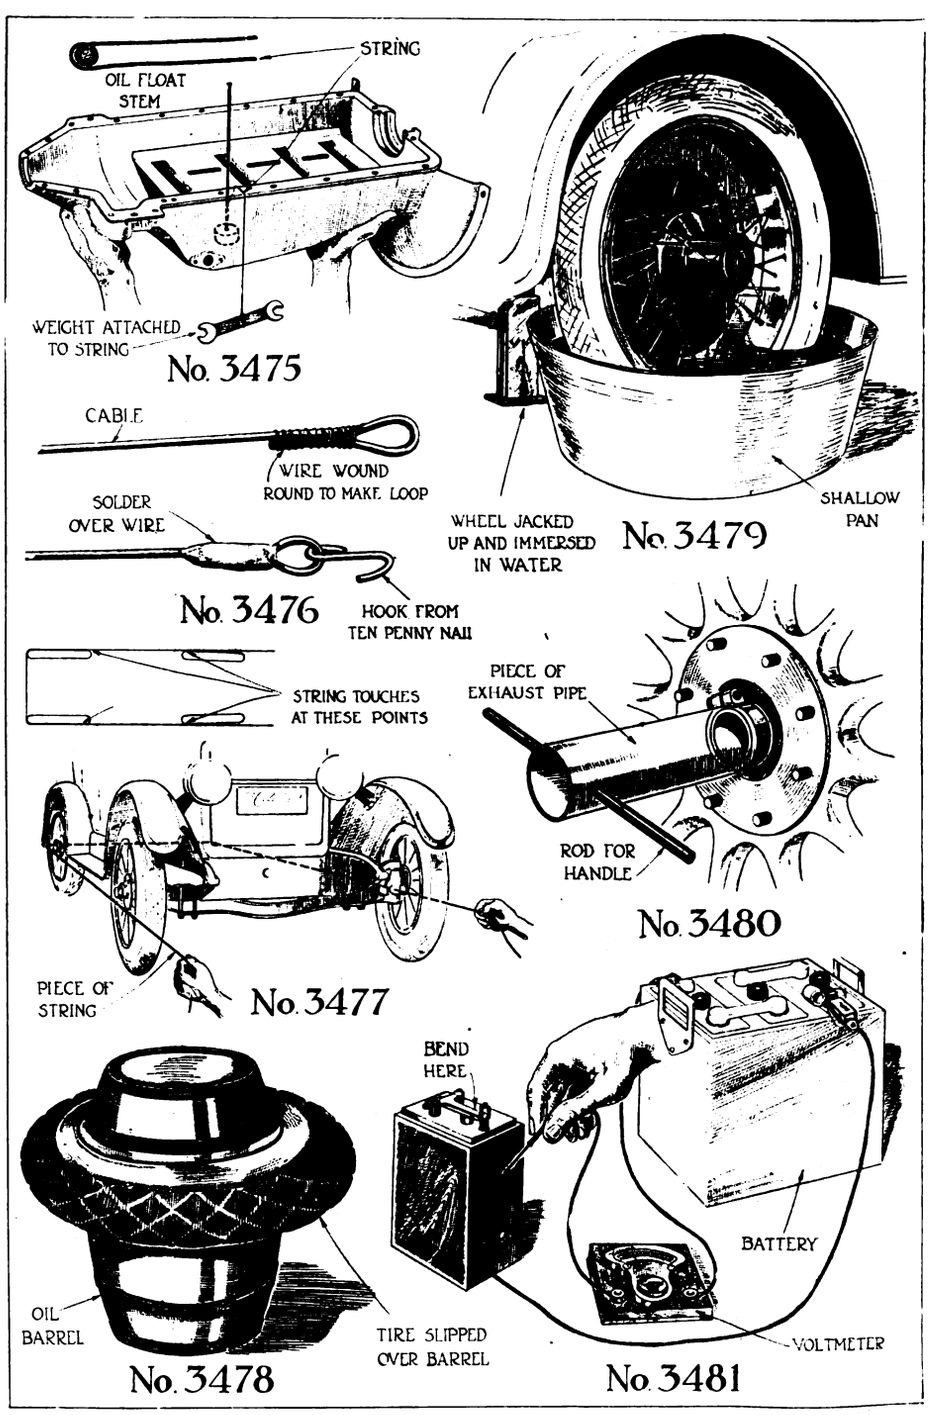
This Week We Have a Lady With Us

TAKE a look at shortcut No. 3479. Notice the "Mrs." And the little trick about washing the wire wheels this way is a good one. They are hard babies to handle with a hose and a sponge. Try this one on the next wire wheel job you have to wash. Unfortunately we cannot tell you much about Mrs. Cruise but we are willing to bet that she is a big help around the shop if she can think up stunts like this.

Brother, don't let the ladies get too strong a hold in this column. Come across with some good shortcuts. Those that are practical and those that have not been published before will be accepted at $1 each payable upon acceptance. Next year we want to make the material on this page better and more serviceable than ever, so let's start the new year right. Send 'em along.

No. 3475—Replacing Dodge Oil Pan and Float.—A loop of string is dropped over the float rod with a weight attached to the other end. When the rod is inserted through the hole in the block the string will keep it from dropping. This enables one man to do the job.—Herbert H. Holmes, Watervliet, N. Y.

No. 3476—Hook in Cut-Out Cable.—A hook is used to connect the wire cable of the muffler cut-out with the pedal so that the floorboards can be easily removed. The loop in the cable is wire wound and then soldered, the hook itself being made from a 10 penny nail.—William B. Wheatley, Brooklyn, N. Y.



No. 3477—Testing Wheel Alignment With String.—Wheel alignment can be tested with a string stretched tightly around all four wheels at about the center. Measurements made from the string to the tire walls and the clearance can be checked up.—Herbert H. Holmes, Watervliet, N. Y.

No. 3478—Dismounting QD Truck Tires.—A QD truck tire is dismounted by throwing the rim over a barrel and prying the tire off downward, the barrel holding the rim in the meantime.—Hayes D. Pettit, Wilmington Motor Service Co., Wilmington, N. C.

No. 3479—Washing Wire Wheels.—Wire wheels are easily washed by jacking one end of the axle, slipping a pan under the wheel and filling with water. The wheel can be turned and a brush used to advantage.—Mrs. Arthur Cruise, Effingham, Kan.

No. 3480—Bearing Lock Ring Tool.—A tool to adjust the bearing lock ring is made from a piece of pipe of a diameter to fit outside the ring. A notch is cut to fit the lug and the other end fitted with a rod for a handle.—Herbert Holmes, Watervliet, N. Y.

No. 3481—Adjusting Ford Coil Points by Ammeter.—Ford coil points are adjusted by hooking up a 6-volt battery, the coil unit and a low reading ammeter in series. The points are set to open 1/32 in. and the bracket is bent so that the coil draws 1¼ amperes.—Reader.

Equipment to Sell

Profits for the Dealer in New Devices for the Car and Truck

Goodrich Pneumatic Seat for Fords

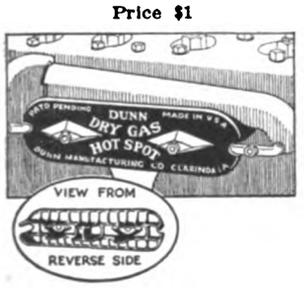
B. F. Goodrich Rubber Co., Akron, Ohio.

This is a pneumatic cushion for Fords, and is adjustable in that it can be filled with as little or as much air as the user desires. No pump is required. The pneumatic seat can be substituted for the cushions without any alterations. The seat is durably upholstered, and can be deflated and carried wherever desired. Model 1 for Ford roadster, front seat $7 each, two to complete seat. Model 2 for rear Ford seat $8 each, two sections to complete seat. Model 3 for Ford coupé, and rear of sedan $9 each, two to complete seat.

Jorgensen's Hood Silencers

Jorgensen Hood Silencer Co., Erie, Pa.

Price $1 for set of four.



The hood silencer is a piece of rubber, with an indentation on one side which grips the hood latch. The other side has a vacuum cup which fits snugly to the hood and holds it tightly, eliminating rattle. Can be applied to Dodge, Peerless, Buick, Studebaker, Chandler, Chalmers and several other cars. Oldsmobile and Nash require special type, price $1.25 per set of four.

Dunn Hotspot for Ford Manifold

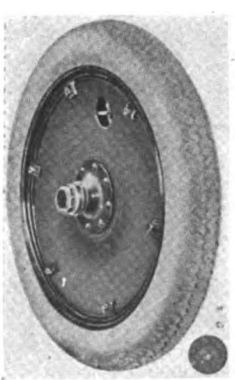
Dunn Mfg. Co., Clarinda, Iowa.

Price $1

This is a plate with corrugated inner surfaces. The upper half absorbs the heat from the exhaust manifold, and the lower half gives off its heat against the intake manifold. The device is installed by removing the nuts holding the two center manifold clamps, slipping the hot spot over the studs and replacing the nuts.

Alemite Spring Cover for Fords

Bassick Mfg. Co.,
2650 North Crawford Avenue, Chicago



Price $8.50

These covers are flexible all-steel and proof against water, rust and road dirt. They hold sufficient lubricant to keep the springs functionipg properly for approximately six months before re-greasing is necessary. They are equipped with standard Alemite fittings so that they can be quickly and easily packed with lubricant by means of an Alemite compressor.

Curvdisc Laminated Hard Wood Wheel

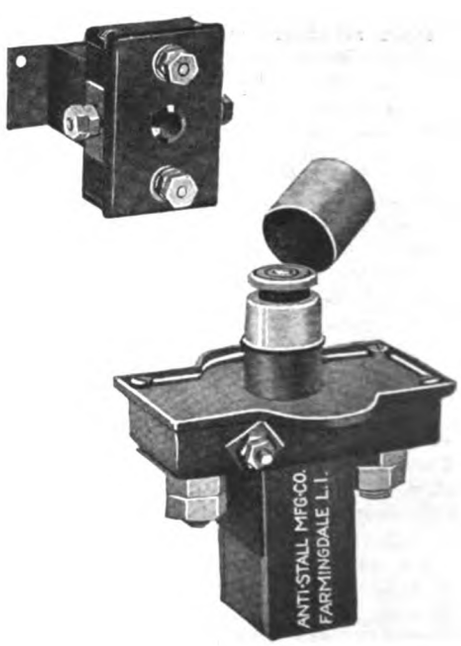
Hopkins Manufacturing Company,
Hanover, Pa.

The wheels are made of hard plywood laminated with crossed grain under pressure and secured with waterproof cement. The front of the wheel is formed in a graceful curve and the back of the wheel is straight permitting easy attachment of hub flanges and brake drum and also preventing the accumulation of dirt. The air is introduced in the tube by simply releasing a small cap nut on the front of the disk. Exchanging tires in connection with the tube valve is easy and positive and takes care of any length of valve stem. All operations are from the front. The wheels are claimed to be non-conductors of heat and sound and will withstand shrinkage. Made in sizes to suit all passenger cars and constructed to meet S. A. E. standards. Interchangeable with any make of wooden spoke wheel, using the same hub. Five demountable rims are furnished with each set of disk wheels.

Cole Gasoline Gage for Fords

Stemco Engineering Co., Dayton, Ohio

Price $8



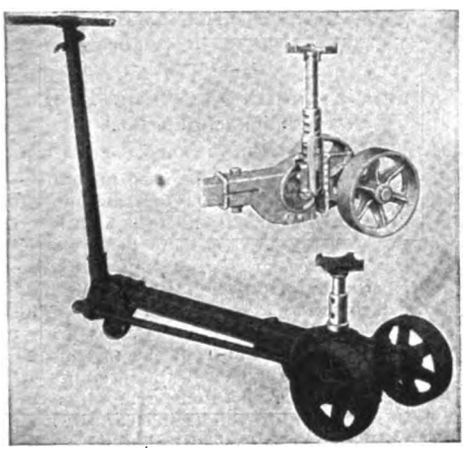
The gage is 4½ in. high and fits on the instrument board of the Ford. A small red indicator in sharp contrast to the white background shows the number of gallons of gasoline in the tank. Connection is made to the tank with simple fittings requiring no machine work.

The Anti-Stall

Anti-Stall Mfg. Co., Farmingdale, L. I.

Price $10

This is a switch by means of which the engine is started by simply turning on the ignition switch, thus automatically switching on the starting motor. As soon as the engine starts running the starter switch is automatically released by the generator. If the engine should stall as in traffic the starter switch is automatically thrown on again and will continue operating the engine in emergency for a sufficient length of time for the car to get out of a dangerous position. It is applicable to all cars with 6-volt system, and requires about 1½ hours to install.



Digitized by Google

Equipment for the Shop

New Machinery and Tools for Saving Labor and Time

Weaver Model B New Way Jack

Weaver Mfg. Co., Springfield, Ill.

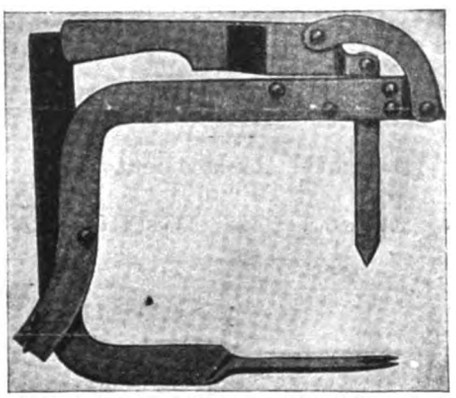
In the new model B "New Way" jack, several of the features of the model "A" are retained, although the new model has several constructional differences. The sleeve support of the standard is a noteworthy feature of the jack, as it permits of an unusually high lift without any tendency toward binding of the standard. The range of the lift is 9½ in. with a minimum height at the lowest position of 8 in. Roller bearings are used throughout.

Alvord Service Tool Outfit for Overlands and Chevrolets

Alvord Reamer & Tool Co., Millersburg, Pa.

A complete line of service tools for the Chevrolet 490 and FB and Overland 4 cars. These tools have all been designed from authentic specifications obtained from the manufacturers, and include all necessary reamers, in straight or spiral flutes, with or without pilots. The line also includes a number of special tools designed for various operations on these cars.

Selfblo Alcohol Blow Torch



Hunt-Lasher Corp.,
66 William St., Lynn, Mass.
Price $2.

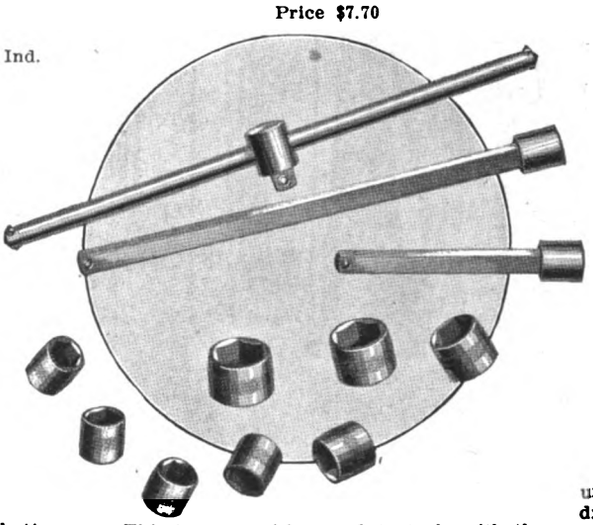
The torch is made of brass, heavily nickel plated and highly polished. Requires no pumping and no priming and gives a clean jet in 30 seconds after lighting. The pressure is self-generating.

Red Cap Valve Lifter

C. A. Roth Mfg. Co., Hastings, Neb.

A device that should facilitate the work of the maintenance man is the Red Cap Valve Lifter, which is designed so as to be suitable for different valve stem lengths. The lower arm which lifts this spring is adjustable and, when the forked lifter is in place, can be locked by turning a wing nut. The upper handle is then lifted, the spring is compressed and held in that position. This is accomplished by the toggle joint construction which enables the lever to go over center, so that the handle need not be held, and both hands are then available for the work to be done.

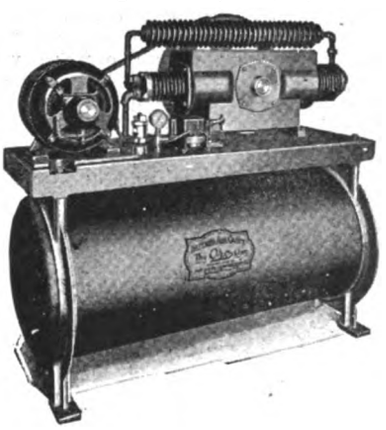
Three in One Battery Changing Tool



Zimmerman Mfg. Co.,
247 West Lincolnway, Valparaiso, Ind.
Price $2

The tool pulls badly corroded battery terminals without breaking the post or cover or injuring the battery. It has a wrench for loosening the bolt in the terminal clamp and a wrench for loosening the clamp on the battery hold down. The tool can be used for lifting connector bars with an extension which is furnished free of charge for a limited time.

Master Service Set, Snap-On Wrenches



Motor Tool Specialty Co.,
14 East Jackson Blvd., Chicago.
Price $7.70

This is a set of heavy duty tools with the Snap-On interchangeable socket principle. The eight sockets are milled from bar steel and heat treated. The sliding tee handle and the 8 and 16-in. extension bars are of ⅝-in. special analysis steel. Any socket fits the handle. With the assortment 48 wrenches can be built, the sockets ranging in size from ¼ in. to 1½ in.

Oro Model B-35 Two Stage Compressor

The Au-to Compressor Co.,
Wilmington, Ohio.
Price Range from $561 to $674.

This is a two stage compressor outfit in a unit complete with electric motor with belt drive to the compressor and a 107-gal. tank. It is for air in large volumes at pressures, not over 150 lb. The standard speed is 350 r.p.m. with a displacement of 14 cu. ft. at the standard speed. The automatic switch starts the motor at 100 lb. and stops it at 150 lb. The floor space is 30 x 60 in. and the net weight is 1200 lb. Twenty-five feet of air hose and chuck are included in the equipment.

Digitized by Google

Goodell-Pratt No. 680 Valve Spring Compressor

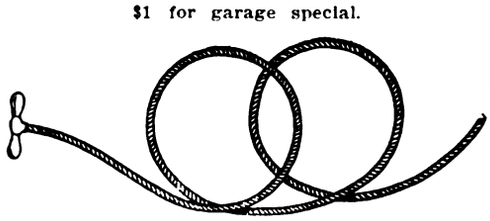
Goodell-Pratt Co., Greenfield, Mass.

Price $4

This is a garage tool in which the spring is rapidly moved and held under compression by a single throw of the lever. Adjustable to any length of throw and any depth of throat. It is made of forged steel.

Washburne Replacement Valve Plan

Washburne Co., 230 East Ohio Street, Chicago

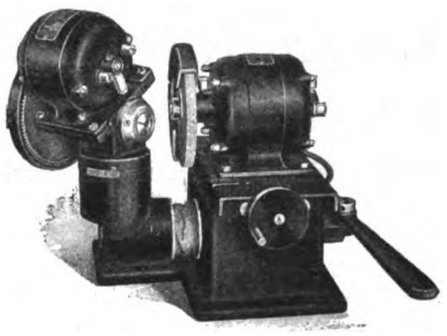


The replacement plan consists in reaming the valve guides 1/64th in. oversize instead of putting in new guides, thus saving time. The tool equipment for the system consists of a simple combination tool which enables the concentric reaming of valve seats and guides. The pilots, ranging in size from 5/16th to 49/64th, run from 65 cents to 85 cents. The reamers, ranging in size from 21/64th to 49/64th, range from $2.25 to $4.40. The cutter heads, ranging in size from 1½ in. to 4 in., are priced at from $3 to $8.80. The valves are made of nickel chromium steel with a gun metal finish on the head and a brilliant brown finish on the seat and stem. The tappet ends are tempered to a proper hardness to prevent mushrooming. The valves are coated with rust-proof grease, individually wrapped in wax paper and placed two in a carton, arranged so that it is impossible for one valve to come in contact with another. One-sixty-fourth oversize valves are furnished on all sizes. Prices range from 35 cents for the Ford to $4 for the National 40.

Bird Flexible Cleaner for Oil and Gasoline Line

Bird Mfg. Co., Marshalltown, Iowa.

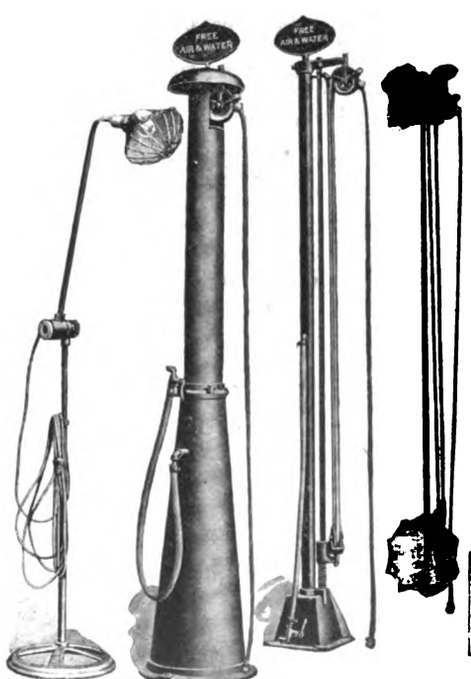
Price 50 cents for Ford special;



$1 for garage special.

The flexible cleaner is for removing sediment from oil and gasoline pipes without the necessity of removing the pipe, which as a rule is fastened to the engine, body or frame. The Ford special model is 30 in. long and is designed specially for cleaning the oil pipe on the Ford. The garage special is 10 ft. long and is for cleaning oil and gasoline lines on all makes of cars.

Fleming Valve Grinder

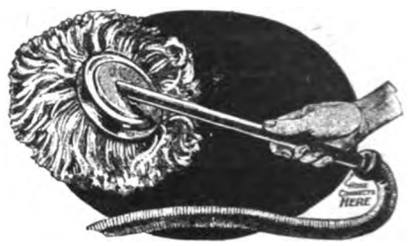


Fleming Machine Co., Springfield, Mass.

This is an electrically operated valve refacer. It holds the valve firmly and guides it in the same position followed in the engine block. It grinds the valve in the true running position of the engine. The device is also used to grind the reamers for reaming the seats and by its use both valve and reamer are ground to the same angle. The power plant consists of two individual motors, one driving the wheel and the other driving the work head. The wheel motor drives the wheel at 5300 surface ft. per minute. The grinding wheel is 6 in. in diameter, ⅜ in. width, chuck capacity ¾ in. round and shipping weight 100 lb.

Manley Air and Water Service Stations

Manley Mfg. Co., York, Pa.



Three new air and water stations are now being manufactured. Two of them are of the outside type and one the inside type for air only. The stations contain no springs, no stuffing boxes, no swinging joints and are operated by gravity only. The DeLuxe outside type is listed at $48.50 and its appearance harmonizes with gas and oil stations. The outside curb type is listed at $36.50 and does not have an outside housing but in other respects is much the same as the DeLuxe model. The inside type for air only takes care of the air hose and prevents it from being dragged around the floor. The price is $19.50.

NuLife Fountain Washer

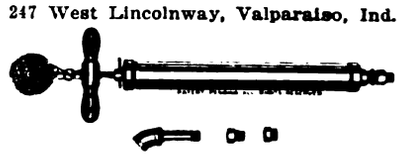
NuLife Auto-Aid Corp., Hartford, Conn.

Price $3.25

The washer has a nickel-plated handle 18 in. long and a 6-in. space of brass. The mop is 6 in. long and will not scratch polished surfaces. The device fits any standard hose.

Storm Cylinder Finishing Tool

Storm Manufacturing Co.,



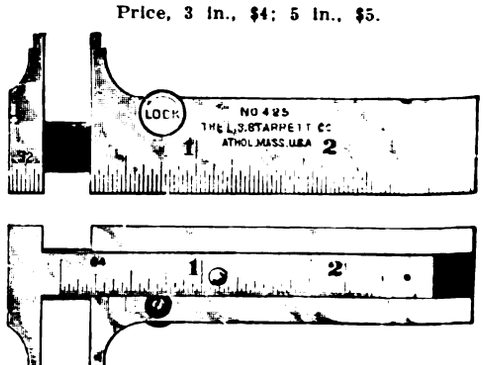
406 Sixth Avenue South, Minneapolis, Minn.

This tool is designed to be used in connection with the special driving mechanism furnished by the manufacturer, or with an ordinary drill press. The main body carries a heavy compression spring which is compressed to about 110 lbs. The spring is held between upper and lower steel disks. The lower steel disk acts against cams which force the stones outward. If the tool is off-center ever so slightly, all the pressure of the spring acts on one stone, and when the tool is rotated the cylinder block is drawn over until the work is centered.

Zimmerman Compression Tester

Zimmerman Mfg. Co.,

247 West Lincolnway, Valparaiso, Ind.



The compression tester consists of a pump and gage. The lower threaded portion of the pump is screwed into the spark plug hole and the pump operated until pressure is observed on the gage. The rapidity with which the pressure goes down, determines the compression of the cylinder. With the piston half way down rocking the pump back and forth will cause a rattle if the bearings are loose.

Starrett Pocket Slide Calipers

L. S. Starrett Co., Athol, Mass.

Price, 3 in., $4; 5 in., $5.

The calipers are graduated in 32nds and 64th. They are intended for inside and outside measurements and furnished in two sizes. The slide can be locked by the thumb of the same hand which holds the caliper and a separate reference point enables the inside measurements to be made direct on the scale.

Believes Fewer and Better Dealers Needed

Omaha Dealer Writes Some Interesting Thoughts About the Automobile Business

EDITOR Motor World: I never miss reading your valuable magazine, as it always contains much of interest to us. At the present time, what interests us most is the discussion on dealers' discounts and contracts with the manufacturers.

We, as many others, know that there must be some great changes made along this line or there will be many dealers who will quit handling cars or go broke. We have the agency for two popular cars, one a high priced car and the other a medium priced car. We are in good territory and sell as many or more cars than the average dealer of our size. At one time we made good money selling cars, but in the past few years we have lost on the high priced car and made a little on the medium priced car—on the two together have broke about even.

We have the distribution of some well known products over a large territory and get into personal contact with a large number of dealers. We believe that we are safe in saying that over one-half of the automobile dealers in this territory handling cars are losing money. Some of them know it and many of them do not.

Now, what is the trouble? There is lots of trouble as follows: There are entirely too many people in all branches of the automobile business, from the dealer to the manufacturer, who know absolutely nothing about the business. There are too many manufacturers and too many dealers. It would be better for the industry and for the public if there were fewer and better of both. In most cases a car contract is no good to the dealer and in many cases we know it is a detriment. The man who does not have a contract gets just as good a deal and has no responsibility. Take the average car contract and show it to a banker and ask him what he thinks of it as an asset. Most of the contracts are one-sided—in the manufacturer's favor. Most of the agencies do not allow enough discount on cars and parts, and practically all car manufacturers have their parts listed too high. If the price and discount were more favorable, the dealer would carry more stock, which would be a benefit all round.

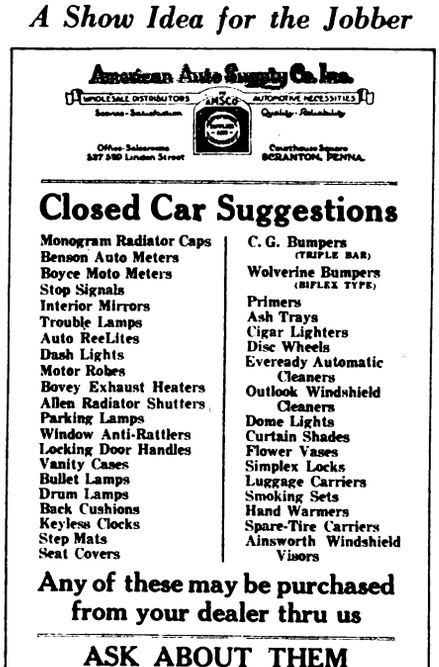
And there is the problem of used cars, which is getting worse all the time. That is what has taken our profit the past few years, as the cost in time spent selling the old cars has taken all the profit. There have been volumes written on the old car problem, but there has been very little done, outside of most dealers taking a loss.

In our opinion, the only way it will ever be solved is for the factories to pick real dealers to sell their cars—dealers who can tell the difference between an old car and a new one. When these dealers will put their salesmen on a small salary and a percentage of the net profits on the completed deal instead of the gross profits of the new car, then the salesmen will be more interested in selling the customer instead of his employer. This would help to get the old car cheaper, which should be had cheap enough so that it could be junked or put in good shape and sold at a larger margin of profit than a new car, as the old car is harder to sell and is on the floor longer and has more comeback.

But there is where the rub comes in. How are we going to bring it about to get these old cars cheap enough? Some distributors, some manufacturers with a new car and most all new agents will outbid an established and experienced dealer and the only thing the established and experienced dealer has to counteract the higher bid is his superior service.

Service—another abused part of the business. The customer is expecting more and better service all the time, which is natural, and he should have it, but it should not be at the entire expense of the dealer. The factories could eliminate a lot of the free service the customer expects if they would. They tell about their guarantees and make them strong to their customer. Most of them have in their dealer contracts that the dealer shall replace, free of charge, all parts that they furnish free, transportation to be paid by the customer.

The average dealer has a fine chance of getting paid for transportation and labor on parts replaced on a medium or high priced car that must be replaced in a short time after the car is sold, and the manufacturer knows it. The tire manufacturer tells the customer, "So and so is our dealer; he will look after your tires free of charge. He will see that you have the proper air in them, look after the cuts, align your wheels and make your replacements for a small charge." The speedometer guarantee promises much. The battery manufacturer tells them to take their battery to their agent twice a month and have it looked after, saying, "Our agents will be glad to do this free."



Why can't the manufacturers say, "Our agents will be glad to take care of you at a minimum charge," or something like that? The majority of these guarantees would not be worth much if it wasn't for the dealer. And I suppose many of the manufacturers would not have dealers if it were not for service and guarantees. We do not think all the trouble is with the manufacturers. The dealers are just as much to blame. There are a lot of mighty poor merchants among the automobile dealers, I believe, more than in any other line of business.

The sooner the manufacturers, dealers and customers get to a better understanding so as to improve these conditions, the better it will be for all.—Hulsebus Motor Co., Omaha, Neb., and Harlan, Iowa.

A Show Idea for the Jobber

This little circular, 4 x 7 in., was furnished to all exhibitors in the closed car show of the Scranton Motor Trades Association by the American Auto Supply Co., Inc., of that city. The dealers kept a pile on their tables with the literature on their various cars, and it has resulted in some nice equipment business for them and for the jobber.

Our Industry—As Transportation

MOTOR cars last year carried 6,990,862,000 *persons* 70,820,000,000 *miles while the railroads were carrying* 1,034,315 *persons* 37,329,114,000 *miles. Motor cars carried six times as many persons as the railroads almost twice as many miles. On the freight side of the picture motor trucks carried* 1,430,000,000 *tons* 6,479,200,000 *ton-miles, while the railroads carried* 1,642,251,000 *tons* 306,-755,332,000 *ton-miles. Motor trucks actually moved almost as much freight as the railroads, but the railroad hauls were* 50 *times as long. This is the statistical picture, but it does not tell the story of the motor vehicle's service to mankind—in providing recreation and a broader outlook on life for millions of people, in wiping out the isolation of the farm, in taking hundreds of thousands of children to seats of better education, in carrying the doctor to the sick, in shortening the distance between home and work and so lengthening the leisure hours of millions of workmen. Pages would not completely paint the picture of automotive transportation, an essential, permanent part of modern civilization.*

A Merry Christmas

MOTOR WORLD extends the compliments of the season to its countrywide family of readers, with best wishes for a Merry Christmas and a Happy New Year.

Motor World believes the great majority of its readers may confidently look forward to realization of this wish. The year has had its ups and downs, with great joy and success for some men, great grief and loss for others. It has been a tremendous year for the automotive industry. It has laid the foundations for another tremendous year, particularly in the maintenance, replacement and re-equipment fields and in almost as great a degree in the new vehicle field. It has taught many lessons in the fundamentals of business success. Nineteen twenty-two will lead the wise man into a better 1923.

The President and Motor Vehicles

MEN in the industry have read with considerable surprise President Harding's comments in his recent message to Congress on motor vehicles and highways. The industry will agree with the President in his recognition of motor transportation as a permanent factor in the progress of the country and also in his recommendation that "We ought to turn the motor truck into a railway feeder and distributer instead of a destroying competitor." Motor truck men do not want to compete in the long haul business in which the railroad obviously is the more economical carrier. They want to develop and are developing the short haul transportation which the railroads themselves concede is not profitable to them and which in many cases they are not adequately serving. Motor truck men also would welcome still wider development of motor transportation as a feeder for long-distance railroad hauls, an ambition actively shared by some railroad men but selfishly opposed or ignored by others.

But the President will find the industry surprised and somewhat at a loss to understand his statement that "If freight traffic by motor were charged with its proper and proportionate share of highway construction, we should find much of it wasteful and more costly than like service by rail."

Why should motor vehicles pay the entire cost of building highways which are for the free use of everyone and which enhance by more than their cost the value of the real estate they pass? A comparison of the assessed valuations and the sale price of real estate on improved highways compared with that on unimproved roads will give some conception of what road building has meant to the United States. It is also well to bear in mind that the total tax bill of motorists last year approximated $341,000,000 compared with $276,500,000 for the railroads. This does not include corporation and other taxes paid by automotive manufacturers. Deducting an estimated $75,000,000 paid by motor vehicle users in personal property taxes, there was left $266,000,000 to apply on a total highway bill of $700,000,000 for that year.

The railroads have failed to keep pace with the growth of the country and transportation would have broken down completely had it not been for the aid given by motor vehicles. With business on a normal basis the carriers can't handle the freight offered them with the facilities at their command. Again, how could the railroads hope to carry the short haul passenger traffic they would be having to move to-day were it not for the automobiles in use?

It is unquestionably true that the motor vehicle has

averted a complete collapse of transportation system in the United States but in some official quarters it seems to be given small credit and less thanks for this tremendous achievement.

Shows in the Fall

THE board of directors of the National Automobile Chamber of Commerce has discussed the possibility of changing the New York and Chicago show dates from January to October. This winter's shows will go forward as scheduled, but should the advocates of a change prevail, the shows of next winter will be advanced to fall of this year and continued after that as annual events.

Proponents of the fall show suggest it as the ideal exposition to present new models when they are new, as the great majority of changes in design are now made effective between August and November rather than at the beginning of the calendar year, as in the early days of the industry. They also say that shows in the fall would give a needed stimulus to late fall and winter business, giving selling sufficient momentum to carry it to the opening of the heavy buying season of early spring.

Men in all branches of the industry argued the subject pro and con in an extensive study of show dates in the columns of Motor World in the fall of 1919. There were advocates then of fall, mid-winter and spring shows, but the men in favor of shows as they are now held, to break the stagnation in sales and lack of public interest of mid-winter and give an early start to the spring buying season, were in the majority.

If the national shows are advanced to fall it is probable that most of the dealer shows would be put forward, too, so as to avoid public criticism for showing old models, which exists to some extent now among better informed people. Fall shows also would be more timely for showing closed models, rapidly coming to the fore as the preference of the public.

For the present, the industry has a show season right ahead of it and making it a success is the all-important job. A decision to change the show season or leave it where it is must wait. In the meantime there will be investigation and discussion which ought to enable manufacturers and dealers, when the winter is well spent, to decide wisely as to future shows.

A Great Merchant

WHEN John Wanamaker died one of the world's greatest merchants passed into the great beyond. He built his business on the triple foundation of honest merchandising, newspaper advertising and a square deal for his employees. He was a pioneer, if not the leader of all pioneers, in promotion of one of the cardinal principles of honest merchandising—one price.

Merchants in the automotive business or any other may well pause to consider the close relationship of the elements making up the triple foundation of the Wanamaker success. Advertising, in which Wanamaker so thoroughly believed that he invested his first $38 profits in it, brought people into contact with his merchandise. Honest merchandising—strict avoidance of misrepresentation, one price for everybody and courteous service to customers—brought people back the second, third and many other times until they became permanent patrons. A square deal for employees made the entire Wanamaker organization as anxious as its head, to the extent that such a thing is possible, to build the enterprise in strength and prosperity.

No wonder the world called John Wanamaker "the merchant prince." And for generations the world will be studying the princely principles that marked his merchandising.

Reckless Pedestrians

THERE is never any excuse for reckless driving. The man who drives without proper regard for the safety of others has no place on the public highways and every factor in the industry should support any measures that will eliminate or curb the driver with reckless tendencies.

On the other hand, however, the motorist is justified in expecting legal protection from the reckless pedestrian. In the popular mind, the motorist has few, if any rights. If a motorist is unfortunate enough to run into a pedestrian, he is blamed for reckless driving, although the real cause is frequently reckless walking on the part of the pedestrian.

It might be well for legislative bodies considering statutes governing the operation of motor vehicles to think also of placing on pedestrians restrictions that would penalize those who do not show a proper regard for their own safety. If it were a misdemeanor for a pedestrian to cross a street except at a crosswalk, or to dart out from behind a car parked at the curb wouldn't it help reduce the automobile accident rate?

Some cities and some States already have laws placing restrictions on the conduct of pedestrians using the public highways. Violation of these laws is a misdemeanor. Both pedestrians and motorists should be expected to use ordinary care in the use of the highways and both must realize their responsibilities.

Things to Think About

IF you sold a lot of automotive equipment for Christmas gifts, why not keep it up? It's a good habit.

A pointer for tire dealers: Sell merchandise, not discounts.

Suppose every salesman in the country made this resolution and tried his darndest to make good on it: "I'll start the new year with a car sale—the first week in the year."

Rummaging around in back rooms and dark corners of some dealer and garage buildings, we've been reminded that some men apparently have overlooked the first syllable of "showcase."

An experienced Ford dealer says 60 per cent of the repair work on the average car was necessitated by the owner's neglect. As a means of building resales on the basis of satisfied ownership, how hard do you try to get new owners interested in the instruction book—and keep old owners interested?

Digitized by Google

INDIANA WILL INSIST THAT ROADS GET FEES

Association at Annual Convention Answers Proposed Legislative Program

INDIANAPOLIS, Dec. 15—All additional motor vehicle license fees, gasoline or other automotive taxes that the approaching legislature may order, should be devoted solely to Federal aid road construction in order that Indiana's Federal allotment balance of $6,000,000 may be taken up; no diversion of license fees or automotive taxes should be permitted to any but road purposes; full development of a State highway program should be demanded.

These were the answers of the second annual convention of the Indiana Automotive Trade Association to current propaganda and threatened legislation that proposes to increase the license fees, add a gasoline tax, divert part of these funds to other than State road work and abolish the State road tax in order to allow the State to devote more money to other work.

All Speakers Talk Legislation

The approaching session of the legislature gave the convention a legislative slant that few speakers overlooked, although practically everyone pointed out that the automotive industry and trade by its lack of organization and co-operation among its members laid itself open to just such attacks, and that the only answer was more co-operation, a higher trade and service standard.

Charles E. Watkins, director of welfare of the General Motor Corp.'s manufacturing plant at Muncie, Ind., in addressing the convention, stressed the need of better service ideals and better treatment of individual customers so that the public's opinion of the trade in general might be elevated to its proper height and more confidence placed in every dealer and service station.

S. H. Hadden, editor of *Municipal and County Engineering* of Indianapolis, gave the dealers facts and figures of the road situation in the State, showed the need of added funds for the State highway department and cited the increased service the owners would get when the State road matched surrounding States.

Tells of Work in West

L. E. Titus, Olympia, Wash., president of the Washington State Automotive Trades Association, gave a glowing account of the advances made in association work in the West, where the recent conference of western governors summoned the heads of State automotive trade bodies to confer with it when it considered new automotive legislation, gasoline taxes, State motor police, etc. It was all a part of thorough organization, Titus said, and of public service work done by the organized dealers of the entire West.

When legislative threats are made against the trade in his State, Titus declared, it does not get on the defensive. It attacks by submitting a better bill and by taking an advanced position on highway progress, proper control of automotive vehicles and fair dealing with all automotive users. He applauded the resolutions adopted by the convention calling for highway progress, and strongly advised more thorough organization of the State and county and district trade bodies so that when bills and attacks were aimed at the trade it could make an impression because of its size, its reputation for fair and square dealing and its aggressive tactics.

C. A. Vane, general manager of the National Automobile Dealers Association, sounded a warning to all dealers, asking them not to look for any national "used-car cure." There is none said Vane. The solution remains with the local dealer, the local situation and a proper merchandising attitude. Getting together with other dealers and understanding the other fellow's viewpoint will cure many evils.

Organizations Help Dealers

J. Cooper Props, president of the Indiana association, stated that observation in Indiana convinced him that where there are trade bodies that attempt to help for progress, the business affairs of most dealers were in better condition than in places where there were no associations.

J. Cooper Props, Muncie, was re-elected president; R. V. Law, Indianapolis, was re-elected treasurer. Director H. J. Cole of Terre Haute is the new vice-president. D. C. Barnette, Indianapolis, was re-elected secretary.

New directors are Walter Duckwall, Noblesville; J. C. Dorman, Gary; Frank Kelsey, Huntington; C. B. Haycer, Fort Wayne; D. A. Boswell, South Bend, and A. G. Goyert, Greensburg.

MAYO HEADS RAILWAY SYSTEM IN DETROIT

DETROIT, Dec. 14—William B. Mayo, chief engineer of the Ford Motor Co., has been placed at the head of the Street Railway Commission, which will manage the city trolley system, Henry Ford having told him to take as much time as the street railway may require.

One of the first things the commission will do will be to endeavor to relieve the street car congestion. Co-operation in this is promised by several of the big Detroit factories which have agreed to dismiss their workers in groups instead of all at one time.

Reo Declares Dividend

LANSING, Dec. 16—The Reo Motor Co. has declared an extra dividend of 1 per cent and the regular quarterly dividend of 1½ per cent both payable Jan. 2 to stock of record Dec. 15.

GIBBS IS ELECTED IN SOUTH CAROLINA

Carl H. Page Speaks at Convention on Relations Between Maker and Owner

SPARTANBURG, S. C., Dec. 15—The annual convention of the South Carolina Automotive Trades Association was a slimly attended meeting. The one business session was held in the auditorium of the Chamber of Commerce and the banquet in the Cleveland Hotel. H. Lee Harvey, the retiring president, presided.

Carl H. Page of Plainfield, N. J., president of the American Motor Car Corp. and the Bessemer Motor Truck Co., addressed the convention at length upon the relation of the manufacturer and the owner. He touched upon the value of used cars. Figures, he said, showed conclusively that an automobile dealer cannot handle used cars without buying at a certain per cent off, which amount should be determined according to the yearly depreciation of the automobile.

Gov.-elect Thos. G. McLeod wired regret at being unable to attend. He was to have been the principal speaker. Among those who spoke were Estes Brand, assistant general manager of the Carolina Motor Club, Inc., of Greensboro, N. C., who outlined plans of the club for the coming year's work; James E. Taylor of Charlotte, N. C., representing the Charlotte Automobile Trade Association and the North Carolina Automotive Trades Association, who spoke on the present needs of the tourist and the automobile dealer.

New Officers Elected

The following officers were elected for the ensuing year: Frank H. Gibbes, Columbia, president; Eugene Smith, Greenville, first vice-president, and J. S. Stevens, Charleston, second vice-president. The name of H. F. Ethridge, Columbia, was proposed as temporary secretary, but no definite action was taken. Directors were named as follows: Sam Atkinson, Greenville; W. P. Sloan, Anderson; J. J. Adams, Laurens; C. C. Boland of Sumter, and J. G. Anderson, Rock Hill.

NASH COMPLETES PLAN FOR STOCK DIVIDEND

KENOSHA, WIS., Dec. 15—Plans for greatly enlarged financing of the Nash Motors Co. by a stock dividend which would give four shares of new common stock and three shares of new 7 per cent preferred to stockholders for each share of common now held have been announced by Charles W. Nash, president of the company.

The stock now outstanding is 54,600 shares of common and $3,500,000 of preferred. The outstanding preferred stock is to be retired on Feb. 1, 1923, at $110 a share plus accrued quarterly dividends, and the plans provide for a new issue of $22,500,000 preferred stock.

OUTPUT IN NOVEMBER AGGREGATED 232,000

Production for 11 *Months Exceeds All of Best Previous Year by* 139,000

NEW YORK, Dec. 13—Eleven months production of motor vehicles in 1922 is greater by 139,923 than the best year on record—1920, when 2,205,197 motor vehicles were built by American manufacturers. With another month to go it looks as if the estimated production for the year—2,500,000—will be easy of accomplishment.

November proved to be another record breaker, according to shipping returns received by the National Automobile Chamber of Commerce, 232,000 cars and trucks having been produced during the month and that a short month, with one holiday in it. This made the eighth consecutive month to pass 200,000. Indications are that December will be included in this group, for the industry is going at such a pace now that, despite the fact some factories are taking inventory this month, it is hardly likely that the December figures will be below 200,000. Granted that they will not be, it looks as if the annual production will be in the neighborhood of 2,550,000.

That the railroad situation is not getting any worse, and perhaps is improving is shown by the N. A. C. C. reports. Compared with October carload shipments in November were greater, while driveaways and boat shipments have fallen off. Unless big storms tie up the railroads, it is thought that shipping conditions will be further improved from now on.

November Proved Another Record Breaking Month; Year's Output of 2,550,000 *Now Appears to Be Almost an Assured Fact*

NEW YORK, Dec. 15—Shipping returns received by the National Automobile Chamber of Commerce place November production at 232,000 cars and trucks, a surprising total, considering the time of the year. This is the eighth consecutive month that production has topped 200,000. Total output for the eleven months of the year is estimated at 2,346,120.

Following is a table showing production and shipping figures:

	Output	Carloads			Driveaways			Boat		
	1922	1920	1921	1922	1920	1921	1922	1920	1921	1922
January	91,109	20,057	6,485	15,357	29,283	3,185	7,479	....	93	143
February	122,366	25,505	9,986	19,636	43,719	7,507	10,173	....	99	180
March	172,720	29,236	16,287	27,753	57,273	9,939	16,917	....	75	560
April	219,558	17,147	20,187	31,334	64,634	14,197	22,381	....	1,619	2,960
May	256,219	21,977	18,608	33,416	74,286	15,193	28,827	....	2,381	7,406
June	289,011	22,516	20,269	34,230	60,746	18,834	33,857	8,350	3,947	7,737
July	245,414	23,082	19,514	29,116	52,342	15,533	28,100	8,702	3,726	7,030
August	273,425	23,386	20,758	32,814	34,060	15,218	36,754	7,095	3,595	10,096
September	205,784	20,804	19,002	25,950	24,431	13,840	30,055	5,469	2,959	8,002
October	238,514	17,209	17,808	26,980	14,127	12,971	33,320	2,519	2,226	7,040
November	232,000	13,253	14,264	27,232	9,497	10,528	27,376	659	1,402	5,070

Factory shipments for the other month of 1920 and 1921 follow:

	Carloads		Driveaways		Boat	
	1920	1921	1920	1921	1920	1921
December	11,802	12,100	6,469	7,500	89	134

VER LINDEN IS READY TO BUILD NEW CAR

DETROIT, Dec. 15—Edward Ver Linden, former president of Olds Motor Works and for a time president of the Durant Motor Co. of Michigan, is prepared to re-enter the manufacturing field with a light six assembled car, priced below $1,000. The car has been fully developed, and production on it will be started soon after the first of the year if Ver Linden is successful in buying out the business of a company now established.

In his plan to re-enter the business, Ver Linden is known to have important financial connections. It is his intention to buy out a going company rather than undertake to build up an entire new dealer organization.

Paige Stock Dividend

DETROIT, Dec. 16—Declaration of a common stock dividend of 100 per cent by the Paige-Detroit Motor Car Co. will bring the total capitalization of that company to approximately $6,800,000, made up of $4,000,000 common and $2,800,000 preferred, all of which is outstanding. The stock dividend is payable on Dec. 29 and a cash dividend of 3 per cent will be paid on common stock Jan. 2.

GRAY PLANS TO SHOW NEW FOUR-DOOR SEDAN

DETROIT, Dec. 15—Gray Motor Corp. will show a new four-door sedan at the New York and Chicago national shows for the first time anywhere. In addition the national shows will see for the first time the complete Gray line of roadster, phaeton, coupe and coach. The price of the coach has been increased from $760 to $785. The coupe, which is now being shipped, is $715.

L. R. Martell, formerly production manager, has been made commercial manager, working in the sales department with D. Henry Bonner, sales manager. The advertising and service departments have also been brought under the direction of the sales department. Shipments to Canada for distribution through the sales organization of the Gray-Dort company are now going forward in considerable quantity.

The following new distributors have been added by Gray: R. E. Jordan, Dallas; Montana-Haynes Motor Sales Co., Butte; M. L. Graham Co., Salt Lake City; Taylor A. Faulder, Sydney, Ohio, and C. J. McKinney Co., Laredo, Tex.

J. Ross Jennings Assists Webster

CHICAGO, Dec. 20—J. Ross Jennings, for a number of years with the Weinstock-Nicols Co. of San Francisco and Los Angeles and prior to that with Chanslor & Lyon, has been appointed assistant to Commissioner William M. Webster of the Automotive Equipment Association. He will also serve as secretary of committees of the associations.

FORD NOVEMBER SALES IN U. S. WERE 106,352

DETROIT, Dec. 16—Retail sales of Ford cars and trucks in November totaled 106,352, all of this business being in the United States and representing the largest November in the history of the company. Retail business in November, 1921, approximated 55,000 to 60,000.

In connection with the volume of business at the present season, Ford officials declare that it is unprecedented and that, in spite of the capacity operation of the plant, it is impossible to meet current demands. Dealers have less than half the stock on hand that they had this time last year, despite the high schedules of the plant all year, the total production now reaching beyond the 1,300,000 mark.

Although it is planned to increase the production greatly after the first of the year, officials declare it will be impossible to meet the ordinary spring buying.

MIDWEST PRODUCING NEW ENGINE FOR CAR

INDIANAPOLIS, Dec. 15—The Midwest Engine Co. is now in production on a new six-cylinder passenger car engine which will supplement the two fours which have been made for some time. It has a number of new features including oil pressure proportionate to load rather than speed, chain drive camshaft and wave line connecting rod. The main bearings are finished inside and outside, and fit ground surfaces in the crankcase, therefore needing no scraping or line reaming for replacement. The bore is 3⅜ in. and stroke 5 in.

Digitized by Google

TO USE ZONE PLANTS IN BODY PRODUCTION

New Company Formed Takes Over Massachusetts Factory —Others Planned

NEW YORK, Dec. 15—The Springfield Body Corp. has been formed to include three or four large body-building plants which will build custom bodies on a big scale for manufacturers and dealers. It is estimated that the group will have a capacity of 15,000 bodies annually. The corporation has issued 100,000 shares of capital stock, which, it is said, have been sold.

The first plant to be taken over is that of the Smith Springfield Body Corp. of Springfield, Mass., which has property valued at $750,000 and quick assets of $200,000. Its capacity is said to be 1000 bodies a year. Prominent in the formation of the new concern are two of the Smith Springfield officials, President C. S. Dame and General Sales Manager A. H. Wolf.

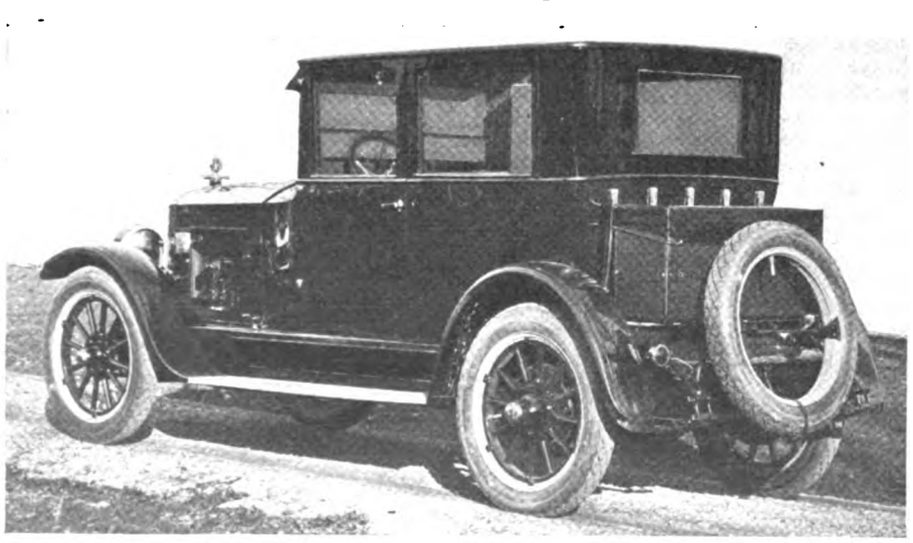
According to present plans, the corporation will purchase at least two and possibly three more plants. One of these, located in the New York district, will have a yearly output of 2500 custom bodies and will supply the New York and Philadelphia districts as well as meet export requirements, while Springfield will care for New England. Another factory, probably one in the Detroit district, will serve the mid-west. A plant in the Indianapolis section also is under consideration.

It is figured that there will be a considerable saving in freight car space and shipping costs to the automobile manufacturer as a result of such distribution of custom body factories, all operating under one head and producing similar jobs. Car makers can ship chassis to the distributing centers and the bodies will be mounted there or at the body plants. Then, too, it is pointed out, there will be a considerable saving due to centralized designing, buying, selling and financing, which will tend to spread the vogue of custom built bodies.

MENGEL STARTS WORK ON NEW BODY PLANT

LOUISVILLE, KY., Dec. 18—Ground has been broken for the first factory unit of the Mengel Body Co.'s plant. This unit will cost approximately $350,000 complete. It is expected to be ready for occupancy by June 1. Actual construction will be nearly completed about April 1, when the installation of machinery will begin.

The body company, in association with the Mengel Co. of which it is a subsidiary, has a $20,000,000 five-year contract with Durant Motors, Inc., to supply bodies for Durant automobiles. Construction of these bodies already has been undertaken on a gradually increasing scale in the plant of the parent company here.



Present plans of the company call for the manufacture of 30,000 bodies the first year, giving employment to 500 men. These bodies will be for light trucks, park and station wagons and regular chassis, particularly for delivery use.

No Higher Tax, Says Official

BOSTON, Dec. 14—Chairman Williams, newly appointed to the Public Works Department to succeed the late John N. Cole, has been confirmed by the Governor's Council. His first public utterance was:

"There will be no recommendation from this department for increased fees on motor vehicles."

Auburn Two-Door Brougham, $2065

The Auburn two-door brougham is now in production, being fitted to the standard Auburn chassis of 121 in. wheelbase. The trunk which is regularly fitted is 19 in. deep, 11 in. wide and 37 in. long. The general appearance is one of lowness and the windows and doors are quite large, there being 21 sq. ft. of glass. The rear seat is 44 in. wide. The standard colors are brilliant blue, maroon and gray with fenders and flashings of black

MAXWELL TAKES OVER CHALMERS INTERESTS

Now in Complete Ownership— Bigger Schedules Planned, Says President

DETROIT, Dec. 14—With the expiration Wednesday of the time in which objection might be filed to the sale of the Chalmers company to the Maxwell Motor Corp., the plant and property passed to the latter company and is now owned 100 per cent by it.

A statement by President William R. Wilson said that the Chalmers company will continue operations as in the past and the sale of Chalmers cars will be continued under that name. He said further that Chalmers will now have the full benefit of the organization that has made Maxwell successful and that it now has behind it the entire financial resources of the Maxwell interests.

According to Wilson the company is planning largely increased shipping schedules for 1923. In the case of both the Maxwell and the Chalmers the schedules for the new year have been only tentatively fixed and will not be whipped into definite form until just preceding the national shows. Both, however, will show large increases over the present year which has been one of the best in Maxwell history.

Schedules Have Been Low

Chalmers schedules have been low all year pending the reorganization. The Chalmers line will have the same attention that was given Maxwell in the development to its present successful status, Wilson said. Its manufacture will be continued in the Jefferson Avenue factory, which will continue to be the six-cylinder plant. Other manufacturing operations, however, may be centered there as the company's plans develop.

Sales of the Chalmers will be handled in conjunction with Maxwell by dealers in practically all cities except those where it is deemed necessary to maintain separate selling organizations. Two separate contract forms will be maintained and there will be sales directors for each line. Both will work under the direction of A. E. Barker, vice-president in charge of sales of Maxwell.

OLDS OFFERS PRIZES FOR BETTER WINDOWS

DETROIT, Dec. 15—Olds Motor Works has offered cash prizes of $50, $30 and $20 for the three best window displays by its dealers and distributors. The contest will close on Jan. 15 when a committee selected by the factory will pass upon photographs of all windows entered.

Window displays have not been attractive enough in the past, it is stated, and the contest is intended to bring about an improvement. Christmas displays in several localities last year produced such marked results upon sales that the company is seeking to nationalize the effort for better windows.

PLANTS EXPERIENCING UNUSUAL DECEMBER

Car and Parts Manufacturers in Wisconsin Report Unprecedented Conditions

MILWAUKEE, Dec. 18—Astonishment expressed in various ways over the manner in which a large number of passenger car manufacturers are sustaining their output is paralleled by the wonderment with which trade factors in the motor and parts industries here regard the demand for their products which is keeping plants busy at a rate previously unheard of.

There never has been a year when at the middle of December new orders were being booked in such satisfactory volume, and shipping instructions were coming at such a relatively heavy rate as this year. The motor truck trade and makers of farm tractors and power farm operating equipment are contributing something to the interesting and gratifying situation, but passenger car builders remain by far the principal source of demand.

It had been expected that a decline in orders and delivery instructions would suffer a sharp reduction by Dec. 1, but all predictions have gone by the board. Local parts industries, however, look to see a decline this week, which may last until after Jan. 1, but it seems hardly possible that this will be in the nature of a recess or complete interruption. However, many of the industries will practice the usual custom of a temporary suspension between Dec. 20 or 23 and Jan. 2 to 10, so they themselves may make inventories and effect the other usual duties which come at the close of every calendar year.

Passenger car factories in Milwaukee and vicinity are sustaining fair schedules to clean up orders before the holidays and getting their show merchandise into shape. In at least one instance —Nash—production is going forward not much below the remarkably high rate averaged during the year. Mitchell, Case, Kissel and Ogren have reduced forces to a considerable extent, with every prospect for a full resumption early in the new year.

Truck factories in some instances have increased forces, but in the main they are proceeding with the recent averages, indicating that winter transportation difficulties of steam and electric lines are throwing an increasing burden on motor vehicles.

Freight Charges Reduced

NEW YORK, Dec. 18—The traffic department of the National Automobile Chamber of Commerce announces that freight charges on motor vehicles from Texas border points (El Paso, Laredo, Eagle Pass and Brownsville) to Mexico City have been reduced approximately 40 per cent. This results from action of the national railways of Mexico establishing a more favorable basis of rates on imports from the United States.

BUGGY EASY TO WASH SO FARMER BUYS ONE

TRAER, IOWA, Dec. 15—Because a buggy is easier to wash than an automobile, August Flatterich, a farmer, decided on the buggy. James P. Juhl, the salesman, reported it was the second buggy he sold to August in eight years. The cost was $100. The sale was heralded locally as a "revival" of the buggy trade.

UNIVERSITY OF ILLINOIS PLANS TRACTOR SCHOOL

URBANA, ILL., Dec. 13—Two one-week tractor schools will be conducted by the department of farm mechanics, college of agriculture at the University of Illinois this winter for the benefit of Illinois farmers. The first course opens Jan. 8 and the second Jan. 29. Registration will be limited to 35 students, and the 44-hour period will be divided equally between lectures and practical laboratory work.

Laboratory work will include practical handling of engine and tractors, magnetos, carburetors, engine timing, ignition, wiring, trouble work and adjustment; the lectures will cover the construction, theory, operation, adjustment and repair of engines and tractors. There are 25 models of gas engines and 16 representative tractor models in the laboratory beside varied models of parts.

WASHINGTON, D. C., BOY BEST ROAD ESSAYIST

WASHINGTON, Dec. 19—Karl G. Pearson, 17-year old student in Eastern High School, Washington, D. C., won the Harvey S. Firestone Four Years' University Scholarship offered in connection with the 1922 National Good Roads Essay Contest, according to announcement from the offices of the Highway Education Board. Pearson is a native of Lindsborg, Kan.

His essay, entitled "How Good Roads Are Developing My Community," was chosen as the best of approximately 250,000 papers submitted in a contest conducted with the co-operation of extension divisions of State universities and State departments of public instruction.

New Republic Head Not Named

DETROIT, Dec. 15—No action will be taken by the directors of the Republic Motor Truck Co. on the election of a new president to succeed Col. F. E. Smith, resigned, pending developments on the receivership under which the company is now operating. Only one or two of the former officers are still being retained by the receiver.

$7,348,421, PROFITS NETTED BY FIRESTONE

Sales for Year Ending October 31 Reported by Company as $64,507,301

AKRON, Dec. 18—With sales for the fiscal year ending October 31 of $64,507,301, the Firestone Tire & Rubber Co., in its annual statement issued to stockholders, reports net profits of $7,348,421, after making deductions for depreciation, interest, taxes and other charges.

After payment of preferred dividends and miscellaneous charges, the statement shows a net increase of $16 per share in the common stock equity of the company. The company during the year reduced its bank indebtedness from $21,680,000 by nearly $9,000,000, or down to $12,775,000.

The sales for the fiscal year represented an increase of 23 per cent in units sold over 1920, while the sales in terms of dollars were approximately $2,000,000 less than last year. Sales in 1921 were $66,372,938.

The decrease in sales revenues despite the fact that more units were sold is accounted for, according to President Harvey Firestone, by the fact that the company during the past year has faced the lowest prices experienced in the history of tire making, tire prices having been reduced nearly 40 per cent during the year as compared to 1921.

The ratio of current assets to current liabilities is considerably higher than it was a year ago. This year's statement shows current assets of $25,459,308 and current liabilities of $15,634,600. A year ago current assets were $30,604,048 and current liabilities were $24,438,042.

SEEK WAY TO BETTER LEGIBILITY OF LICENSE

WASHINGTON, Dec. 18—The Bureau of Standards of the Department of Commerce in co-operation with the Society of Illuminating Engineers is conducting tests in an effort to discover ways of making automobile license tags legible at sight. It is hoped, the Department of Commerce says, that as a result of these tests it will be possible to establish a practical standard of illumination for these tags, so that they will be readable at night as well as in the day at a reasonable distance.

The tests are made by mounting the tag at a known distance, turning on the light, and seeing if the observer can read the number correctly.

New Morse Chain Plant

DETROIT, Dec. 18—Morse Chain Co. has just completed its new factory in Detroit, where it will manufacture all sprockets and adjustments used in Morse front end drives and the new Morse silent chain bus transmission.

LET TAXES MAINTAIN ROADS, SAYS N. A. C. C.

General Taxation Should Build Them—Directors Favor "New Jersey Plan"

NEW YORK, Dec. 15—Realizing that the 43 State legislatures which meet early in 1923 will consider the imposition of a tax on gasoline consumption, directors of the National Automobile Chamber of Commerce devoted most of their monthly meeting to a discussion of this subject.

After all the arguments had been taken up, the general sentiment of the directors was that they are not in opposition to taxation on motor vehicles, either through registration fees, gasoline taxes or both to an amount sufficient to cover the maintenance of roads, but not their construction. It further was felt that as all the public benefits by the highways, the construction cost should be paid by the public, which includes motor car owners as well as non-owners. All taxes on motor vehicles, the directors declared, should not only be used for maintenance but should be under centralized control. In a nutshell, the views of the N. A. C. C. directors follow along the same lines as the "New Jersey Plan," which declares that the public shall build the roads and the motor vehicles pay for the upkeep.

Reports on Business

The directors also received reports from 30 trade associations, which state that December business will be moderate, but that on the first of the year the market will be active again. November sales were reported to be 75 per cent better than for the same month last year and 25 per cent less than October, 1922.

The board also was told that Babson predicts 10 to 25 per cent increase in passenger car and truck business for 1923 as compared with 1922.

The show date question came up for a short discussion, following the suggestion that national shows held late in the fall might be of greater benefit to the industry, especially dealers, than the winter exhibitions. No action was taken, further consideration being laid over for a later meeting.

HIGHER PRICED CARS GAINED IN NEW YORK

NEW YORK, Dec. 14—Registration of new cars in the Metropolitan territory showed a decline in the low and medium priced models in November as compared with the previous month, but an increase in the number of higher priced types, according to the Automobile Sales Analysis compiled by Sherlock & Arnold.

Five cars lead the low and medium priced field with four others some distance behind and the rest falling below the 100 mark in point of sales during the month. There are now 10 cars which show sales in excess of 1000 during the eleven months of the year.

In the higher priced field, two lead in November with sales exceeding 100. Two makes have been sold in excess of 1000 during the 11 months, one showing a considerable advance over the others.

The 11 months of 1922, with a total of 62,957 low and medium priced cars and 7013 higher priced, show a considerable advance over the same period in 1921 when the totals respectively were 41,732 and 4359. November more than doubled the sales of the same month a year ago in higher priced lines and showed an increase of 2000 in low and medium priced car sales.

A recapitulation of sales follows:

	Medium and Low Price	High Price
January	2,014	283
February	2,230	273
March	6,352	632
April	8,428	862
May	8,467	961
June	8,203	865
July	7,816	678
August	5,921	516
September	4,592	511
October	4,518	665
November	4,416	767
Total	62,957	7,013

GOVERNMENT PROBES TEXAS CAR THEFTS

DALLAS, TEXAS, Dec. 18—Federal authorities are now taking a hand in probing thefts of automobiles in this section of the State, declaring that more than 500 automobiles stolen in north Texas during the past year have been driven across the border and sold.

The fixed prices across the Rio Grande range from $50 for a Ford to $250 for Cadillacs. Stolen cars disposed of at the first station are driven on by buyers to an interior station where higher prices are paid. At these stations the prices range from $75 for a good Ford to $300 for Cadillacs.

The number of thefts along the border is increasing at an alarming rate, officials declare. It is figured that more than 2000 cars were stolen in Texas during the past twelve months.

Becker with Distributor

ATLANTA, Dec. 14—C. H. Becker has resigned as sales manager of the Saxon Motor Car Corp., to become general manager of the J. W. Goldsmith, Jr., Grant Co., of Atlanta, Hudson and Essex distributor. Before going with the Saxon company Becker was identified with the Joseph C. Blount Co., Atlanta, for several years.

D. K. Roberts Resigns

ROCK HILL, S. C., Dec. 20—D. K. Roberts, director of sales and advertising for the Anderson Motor Co., has resigned. He has not announced his plans for the future.

N. A. C. C. ASKS VIEWS ON VALUE OF SHOWS

Three Questions in Competition Open to Owners and Members of Industry

NEW YORK, Dec. 18—Desiring to feel out the public pulse as to the value of national shows and also to sound the automotive industry along the same line, the show committee of the National Automobile Chamber of Commerce announces a competition open not only to motorists, but also to members of the industry.

The questions asked are:

"In what way are the national automobile shows of value to the public?"

"In what way are the national automobile shows of value to my company?"

"In what way are the national automobile shows of value to me?"

Conditions of Competition

The conditions governing the competition are as follows:

(1) Any competitor may answer one or all questions separately or may combine the answers in one article, but no one will be awarded two prizes. Articles must not exceed 1500 words if all three questions are answered; they must not exceed 1000 words if two questions are answered or 500 if only one question is answered.

(2) The construction or phraseology of the answers will not be a factor in the award—reasons will be the dominant points upon which awards will be based.

(3) No one connected with the offices of the National Automobile Chamber of Commerce of the show management may compete.

(4) Answers must be received not later than midnight, Wednesday, Jan. 3, 1923. Answers must be sent to S. A. Miles, manager of the National Automobile Show, 366 Madison Avenue, New York, and will be judged by a committee appointed by the president of the National Automobile Chamber of Commerce.

The answer adjudged best of all will win a $200 watch made by Tiffany & Co. The contestants whose answers are considered second and third best will each receive a $150 Tiffany watch as prizes.

Wide Scope in Contest

A consideration of the three questions will show the wide scope of the contest. Every individual interested in the motor car, either as an actual or prospective motorist, or as a manufacturer, dealer or salesman, must have ideas that may be turned into a constructive article in answering the first question.

The second question is primarily for the factory executive or employee and for all others engaged in the making, distributing or selling of motor cars. The third applies, of course, to the visitor to the show who owns or intends to own a car, and who appreciates the advantage of being able to compare at one time and in one building all the new models for each year.

HOOVER SEES SAVING FROM ENGINE TESTS

Total Economy Will Be $100,000,000 *Through Less Consumption of Gasoline*

WASHINGTON, Dec. 16—A saving of approximately $100,000,000 a year to the automobile industry is predicted by Secretary Hoover of the Department of Commerce in his annual report, as a result of tests now being made by the Bureau of Standards.

This saving, the Secretary states, will be made in the annual gasoline bill of 10,500,000 motorists, being approximately $9 per automobile, and will be secured by increasing the efficiency of the internal-combustion engine.

A complete study of automobile engine performances, both in the Bureau of Standard's laboratory and in automobiles on the road, is now being carried out.

"The Bureau," the report says, "through this work, it is believed, can assist in lowering the gasoline consumption of automobiles 10 per cent for a given mileage, and it will represent a saving to the country of something like $100,000,000 per year.

PROFIT SMALL, SAYS STANDARD OIL HEAD

WASHINGTON, Dec. 15—The motorist who buys his gasoline from the Standard Oil Co.'s group pays less than one cent a gallon profit to the company, according to the testimony of President Walter C. Teagle before the sub-committee of the Senate Manufacturing Committee, investigating the gasoline situation.

When gasoline retails at 27 cents a gallon, the Standard Oil Co. of New Jersey, parent company, realizes a profit of about .9 cents a gallon, Teagle said, and out of every dollar the motorist pays for Standard Oil gasoline, the company retains but 3.56 cents.

SIGN FOR COLUMBIA'S HALF YEAR'S OUTPUT

DETROIT, Dec. 15—Distributors of the Columbia Motor Car Co. this week signed contracts for all of the first six months output in 1923, a total that will reach about 13,000. According to W. L. Daley, vice-president in charge of sales, 40 per cent of production in the first quarter will be closed models and 35 per cent in the second.

The company declares itself to be in strong financial condition at the closing of the year. The company declares itself now adequately represented in every important center. Fall sales in both the present wave of stock dividend declarations by big business corporations a business necessity.

"We are expanding steadily," said Ford. "We have a $30,000,000 program for improvements to be completed within a year. We won't declare any stock dividend, only the regular cash dividends, and we will spend our funds in the same way we have in the past, that is, in extensions and improvements."

No Ford Stock Dividend

BOSTON, Dec. 15—Henry Ford asserts the Ford Motor Co. will not declare a stock dividend this year. He added, however, that he believed the

FORD ONCE HANDLED BY JOHN WANAMAKER

NEW YORK, Dec. 14—The death of John Wanamaker marked the passing of a man whose vision was so broad that he foresaw the possibilities of the motor vehicle in the earliest days of the automobile industry.

More than 20 years ago, when Henry Ford was struggling for a foothold, Wanamaker reached out a helping hand and placed the Ford agency in his New York store, this being the first Eastern representation Ford ever had.

It also is said that the late merchant prince assisted Ford financially at a time when the world looked darkest. W. D. Gash conducted the Ford business for Wanamaker until about 1903, when the Ford company took over the representation.

Wanamaker also figured prominently in the Selden patent suit, being one of three brought into the litigation, the others being the Ford Motor Co. and the O. J. Gude Co. The suit against Wanamaker was filed Jan. 21, 1904, and later on the three suits were merged into one defense.

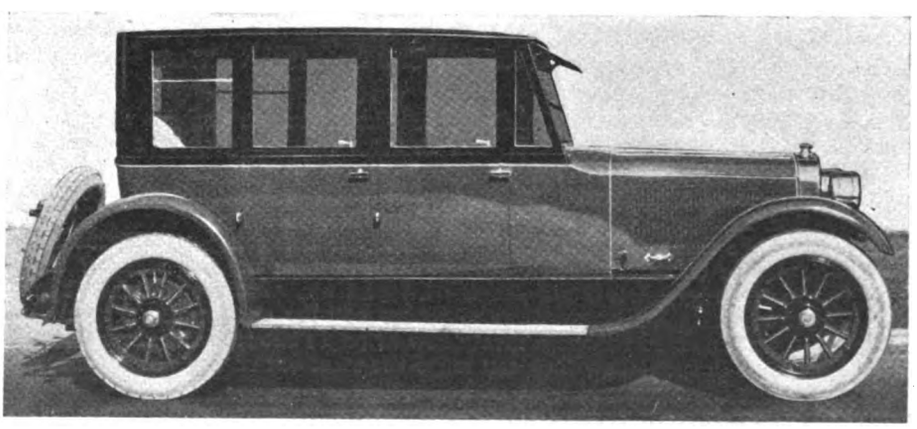
Hobson With Paul Rubber

SALISBURY, N. C., Dec. 15—C. H. Hobson, formerly secretary of the Gillette Rubber Co. and the New Jersey Car Spring & Rubber Co., has been appointed assistant to R. B. Tracy, sales manager and advertising manager of the Paul Rubber Co.

RAIL CARS CHANGING LOSSES TO PROFITS

Short Line Roads Now Organize to Acquire More Equipment Through Lease

WASHINGTON, Dec. 19—Operating losses have been converted into substantial profits through replacing steam passenger trains on short line railroads with motor cars. Announcement to this effect has been made by J. W. Cain, manager of purchases of the Consolidated Purchasing Agency of the American Short Line Railroad Association.



Through Cain's activities a finance corporation is now being organized under the direction of the association so that member lines and others may acquire motor car equipment under a lease purchase plan, making it possible for the equipment to pay for itself through the saving effected. Cain states that this corporation will be ready to operate by the first of the year.

It was after an investigation covering the greater part of a year, augmented by answers to questionnaires sent to all member lines throughout the United States and Canada, that the purchasing agency made recommendation and placed orders for more than $250,000 worth of gasoline railroad motor car equipment, representing some 20 cars. Cain declares that the cars are showing excellent results.

Mack Trucks Dividend

NEW YORK, Dec. 18—Mack Trucks, Inc., has declared an initial dividend of $1 on the common stock and the regular quarterly payments of 1¾ per cent on the first and second preferred stocks. The common dividend is payable Dec. 28 to stock of record Dec. 18, while the preferred disbursements are payable Jan. 2 to stock of record Dec. 20.

New Winton Six Sport Sedan, $4450

Winton has added a sport sedan to the line of bodies, this being made entirely in the Winton shops like the other models. The upholstery is tufted and large area glasses in the rear quarter windows make vision easy. The rear quarter windows are crank operated. All interior fittings are cast bronze, heavily silvered and the door handles are ebony with silver trim. The moulding is integral with the body wall, not fastened on afterward, eliminating noise due to weave. A trunk is carried in the rear with nickeled body buffer strips

MAJORITY OF OWNERS FAVOR CLOSED CARS

Sixty Per Cent of Ballots in N. A. C. C. Test Show Preference for That Type

NEW YORK, Dec. 19—The closed car has won the election by a considerable margin, defeating its "open" rival by 20 per cent, according to the mail ballot sent out by the National Automobile Chamber of Commerce to 20,000 car owners in ten widely separated States, asking: "When you buy your next car, will it be open or closed?" Returns to date show that 60 per cent of those who replied will buy closed cars and 40 per cent open ones.

Analyzing the ballot, it is found that the reasons for closed car preference are closely related, protection from weather being foremost. General comfort, which indicates cleanliness and easy riding qualities, is another big factor. Economy on the basis of all-year use is a third factor. Appearance also plays an important part.

Side Curtains a Difficulty

Other owners specifically mentioned that the difficulty with side curtains had converted them to closed cars. A small per cent say the closed car is better for business purposes. A limited number state they are buying closed cars because of their women folk. The preponderance of the weather, comfort and appearance reasons also indicates that the feminine influence is much stronger than specifically stated.

The following table shows the frequency with which the various reasons were given in the total response of those who preferred closed cars: Weather protection, 44 per cent; general comfort, 34; economy through all-year use, 20; appearance, 7; no side curtains 4; business reasons, 3; women demand it, .8.

Advocates of the open car declare poor road conditions are an outstanding reason for continued open car demand. Price, including upkeep, is another factor, while lightness, which is related both to road conditions and upkeep, also is quoted. Safety was mentioned by many who expressed an objection to being enclosed in case of an accident and by those who feared broken glass. Another large element like the open models because it permits them to be in the open air. Business use is a factor, some finding the open car more convenient. Some farmers reported that the open car is more of a utility vehicle as it can be readily used for cartage and also can be driven over fields more readily.

Summed up, the "open" preferences are classified as follows: Poor roads, 23 per cent; price, including upkeep, 16; light weight, 15; safety, 14; more air, 13; business, 10; farm use, 5; touring use, 4; better resale value, .8.

Maine Dealers Win Contest

PORTLAND, ME., Dec. 18.—To celebrate the victory of the Portland retail salesmen of the Sills-Chevrolet Co. of New England, W. C. Sills, president of the company, gave a banquet here to the entire local organization. The banquet was the result of a contest lasting three months and participated in by Boston, Providence and Portland sales departments.

Closed Car Week in Springfield

SPRINGFIELD, MASS., Dec. 20—This week is being observed here as closed car week, with about 20 dealer concerns co-operating. The demand for closed cars in this district is very strong, so much so that they are being given the preference in the farming neighborhoods where until recently the open car had the call.

HIGHER GASOLINE TAX MAY CUT LICENSE FEE

At Least, Motorists in State of Washington Will Insist on Some Relief

SPOKANE, Dec. 19 — Washington motorists will demand a flat license fee of $10 on automobiles if the State Legislature insists on boosting the State gasoline tax from 1 cent to 2 cents a gallon, Frank W. Guilbert, president of the Eastern Washington Highway Association, with headquarters at Spokane, Wash., declares.

"Motorists are the most overtaxed people in the State," Guilbert says. "They are just as anxious as other people to enjoy tax reductions."

He also says:

Car owners are now paying license fees totaling $3,000,000 a year into the State treasury, and in addition they are paying a gasoline tax of $1,000,000 annually. Then on top of all that they pay $1,200,000 out in the general property tax of 1 mill collected by the State for highway building purposes.

The motorists are paying four-fifths of the highway construction and maintenance costs in Washington and they can't stand additional burdens.

The average license fees on cars is $15, Guilbert says.

"Automobile owners will offer the Legislature the alternative of leaving the gasoline tax at 1 cent or reducing license fees. A reduction in fees and a 1-cent increase in the gasoline tax would cost the State $1,000,000 a year," he prophesied.

Tube Company in Bankruptcy

IOWA CITY, IOWA, Dec. 15—The Mississippi Valley Rubber Co. has filed a voluntary petition in bankruptcy in the United States District Court in Davenport, with liabilities of $134,286. Its assets are listed at $112,263.

The Before Shows Number—Next Week

ONE of the pleasures that Motor World readers look forward to every year is the arrival of the Before Shows Number. It's an issue containing quite a bit of entertainment; profit-making suggestions, too.

The Before Shows Number of 1922 will be the final issue of the year, speeding off the presses Dec. 27.

We think a good many of our readers are going to call this Before Shows Number the best yet.

One thing that will catch your eye as soon as you take off the wrapper will be *Motor World's Portfolio of Show Time Display Suggestions.* Picture section? You've guessed it. Done in color, too. Offers some fine suggestions to "dress up" for show week, not only at the show but at the salesroom.

Then there will be a meaty row of pages showing the show committee, the dealer and the salesman —each in turn—how they can make the most out of the show time opportunity. Practical show time selling information, bright with illustrations.

Farther on readers will find a remarkable word and picture study of the 1923 car as the most salable car ever built. Full of practical pointers to help dealers and salesmen study the selling points of their cars.

Of course there will be complete advance information about the shows—New York, Chicago and around the country. A couple of picture reminiscences of old time shows, and old time cars, too.

You'll get some good out of the Before Shows Number—and enjoy it.

GENERAL TIRE HOPES TO DOUBLE BUSINESS

Field Force Told of Plans at Sectional Meetings—New Sales Methods

AKRON, Dec. 18—So optimistic are officials of the General Tire & Rubber Co. of Akron regarding the future of the tire industry that they are notifying their salesmen, branch managers and field representatives throughout the country to prepare to double their 1922 tire business in 1923.

At sectional sales conferences conducted by the company, all salesmen are being given instructions in new salesmanship methods. These district conferences supplant one national conference at Akron. The first was held in Atlanta for salesmen in the southern territories; the second in Atlantic City for eastern representatives; the third in Akron for General salesmen from Ohio, Kentucky, Indiana, Michigan, West Virginia and western Pennsylvania, and the fourth in Chicago for middle western salesmen. Similar conferences will be held as far west as the Pacific Coast.

1922 Sales $8,000,000

Vice-president and General Manager William O'Neil at the Akron conference announced the company's sales for 1922 would approximate over $8,000,000, as compared to $6,500,000 in 1921—an increase not only in units sold but in volume of sales revenues to the extent of $1,500,000.

O'Neil also announced that the company estimated it had lost fully $1,000,000 worth of business this year through inability to produce enough tires to fill all orders received. General now is averaging 2500 tires daily. The company is rushing to completion three large factory additions in Akron and has machinery on the ground ready for immediate installation. It is expected that these new plants will be in operation shortly after Jan. 1, practically doubling the company's capacity for daily tire output.

"Go back home and prepare to double your record breaking 1922 business in 1923. The door is swinging open upon the greatest era of prosperity and expansion the tire industry has ever known," O'Neil is telling the salesmen at the district conferences.

O'Neil also claims the company's policy of selecting and restricting its dealers instead of permitting its tires to be sold promiscuously has more than vindicated itself.

Kelly Truck Receiver

SPRINGFIELD, OHIO, Dec. 17—Following the filing of an application by the Bankers Trust Co. of New York City against the Kelly-Springfield Motor Truck Co., Pearl A. Lewis, assistant to President Charles Willard Young, of New York City, was named as receiver. Lewis states that the receivership is not occasioned by any fault in the quality of the product, but by other reasons. He says the plant will continue the manufacture of motor trucks uninterrupted. He states that he looks for a bigger truck business in 1923.

RAIL ADS STRESS RIGORS OF WINTER

NEW YORK, Dec. 15—Advertising propaganda tending to discourage the use of the automobile in winter is being broadcast by the American Electric Railway Association, with which most of the trolley lines of the country are affiliated. This association has prepared a series of advertisements for use in daily papers which has been sent to its members, with advice that they be used.

In each of the dozen samples submitted great stress is pictorially laid on the rigors of winter motoring, including the troubles of starting, cold garages, cold hands and feet, etc., while on the other hand the comfort to be enjoyed in trolley riding is emphasized, not overlooking the money claimed to be saved by using trolleys instead of automobiles.

TWO MORE COMPANIES INCREASE TIRE PRICES

NEW YORK, Dec. 18—Up to to-day only two tire manufacturers had followed Kelly-Springfield in increasing prices. Fisk having announced a new schedule ranging from 10 to 12 per cent, while Howe has boosted prices 10 per cent. Rumors of other contemplated raises are heard and several other companies are expected to make announcements very shortly.

Howe Rubber Co., which has increased 10 per cent, reports operating to capacity and states it is from 30,000 to 40,000 casings, and as many tubes, behind on spring orders. It also claims that in 1922 it will do as much business in dollars as in 1921.

Seneca Makes Cut

FOSTORIA, OHIO, Dec. 18—Seneca Motor Car Co. announces that the list price on Models 50 and 51 (1923 models) has been reduced as follows:

Model	Old Price	New Price
50	$1,095	$985
51	1,095	985

Buick Not to Lower Prices

FLINT, MICH., Dec. 15—President H. H. Bassett of the Buick Motor Car Co. states that his company will not reduce prices. As a reason for not going below the present level he points to the high prices of leather and lumber and the expected increase in prices of steel in January. Buick produced 16,000 cars in November and orders for closed cars are still far ahead of output.

SELL TIRES ON MERITS, ADVICE GIVEN DEALERS

National Association Head Says This Would Establish Confidence

NEW YORK, Dec. 16—The New York Tire Dealers Association has more than 100 members and has brought about mutual confidence among them which has worked for the good of the business, according to the statement of George J. Burger, the president, at a banquet of the association this week. Burger has also recently been elected president of the National Tire Dealers Association.

Burger told his fellow dealers that if they would sell their merchandise on its merits they would not have to contend with the demands of the public for discounts from list prices. He said the public wants to buy good tires from reputable dealers and will do so if dealers will show by one-price merchandising methods that they are reputable merchants.

Burger urged manufacturers to avoid loading dealers with excessive tire stocks.

Manufacturers Speak

George F. Shugart, vice-president of the United States Tire Co., and F. W. Teele of the Brunswick were among the manufacturers to make brief addresses. Shugart said he believed there was a tendency toward a larger discount for dealers. If it was made he urged dealers to use the additional profit in the upbuilding of their business and not to give it away to the public in foolish competition. He said that deplorable conditions in the tire industry can be corrected only by co-operation. He predicted that 1923 would be the biggest production year in the tire business.

E. N. Broadwell, vice-president of the Fisk company, predicted that 40,000,000 tires would be made in 1923.

FORD WOULD DEVELOP MISSISSIPPI RIVER POWER

WASHINGTON, Dec. 15—Edsel B. Ford, president of the Ford Motor Co., through W. H. Mayo, has filed an application with the Federal Power Commission for a preliminary permit for one year to develop power rights of the Mississippi River dam No. 1 at Minnehaha Falls.

The proposal is to install in the power house, built in 1917 by the United States Government, hydraulic turbines with capacity sufficient to utilize all the power needed in the operation of a large manufacturing plant producing products of the Ford Motor Co., the latter to be located at a suitable point in either St. Paul or Minneapolis.

In addition, the application cites that the co-operation of the University of Minnesota has been invited to establish an experimental station for the study of hydro-electric sciences.

ASSOCIATION ACTIVITIES

Has Anti-Accident Plan

PHILADELPHIA, Dec. 19—W. Howard Metcalf, retiring president of the Automobile Accessories Business Association and secretary of the Motor Truck Association of Philadelphia, who recently was elected to the state legislature from Delaware County, was the chief speaker at a meeting of the Lehigh Valley Automobile Trade Association, in Allentown, Pa.

A suggestion, made by Metcalf in his address on "Good Business Practice," that any person brought up for infringement of the traffic laws, instead of being fined by the magistrate, should have his driver's license card punched by the magistrate so impressed Mayor Rolph of Allentown that he will put the plan into practice.

His plan further provides that a list of such punched cards be furnished by the magistrates to the registrar of motor vehicles for the state, who should make a duplicate list, and in the event of a second offense, as shown by the driver's punched card, the offender should be fined heavily.

Should a first offender complain that he had lost his license, the magistrate would, on issuing a new card, punch it all the same, according to Metcalf's suggestion, and the fine for the second offense would then be made on the next occasion of the offender's being brought before the magistrate.

Mayor Rolph, in his opening address, had called the attention of the members to the great and increasing number of motor vehicle accidents in Allentown and nearby cities and urged the association to help the authorities promote safety on the streets. Metcalf, in his address, enlarged on the remarks of Mayor Rolph and urged that, as the automotive industry had its measure of responsibilities for traffic accidents, it feel it its duty to do all in its power to help the city reduce the number.

Quincy Exchange on Profit Basis

QUINCY, ILL., Dec. 20—The Quincy Automobile Exchange, established by the Quincy Automobile Trades Association, has sold 73 used cars in the last 60 days. The exchange, after two years, is now operating upon a profit basis. Morris Adler, member of the board of directors, told of the working of the exchange and explained its financial problems at current meeting of the trades association.

A. G. Thede, president of the Peoria Automobile Dealers and Accessories Association, spoke on "Generalities of the Motor Industry." He urged the checking of leaks by means of more rigid accounting and strict system of handling the business in every detail. Plea for organization to protect the interests of the trade and for a 100 per cent membership during the time of the Quincy show was voiced. Harold Hendricks of Carthage explained his success through the use of timely bulletins and utilization of cooperative spirit.

Ann Arbor Dealers Organize

DETROIT, Dec. 18—Dealers of Ann Arbor have formed the Ann Arbor Automobile Association with Benjamin Woodbury, president; Sewell Platt, vice-president; Robert Alber, secretary, and Ray Vogle, treasurer. The dealers will continue as members of the Washtenaw County Automobile Dealers Association and will also be affiliated with the Michigan Automotive Trade Association.

The formation of the Ann Arbor group makes twenty-five dealer associations in the state, most of whom are affiliated with the state association. The Ann Arbor show, which was originally intended as the Washtenaw County show, will now probably be an Ann Arbor show only, and the Ypsilanti dealers will hold an individual show in January. The only available show building in Ann Arbor was declared to be too small to accommodate all the dealers in the county association, resulting in the necessity for holding two shows.

New York Nominates Officers

NEW YORK, Dec. 15—One of the best attended meetings ever held by the Automotive Service Association of New York took place at the Automobile Club of America, more than 200 service men being in attendance. Charles A. Neville of the Hinkley Motors Co. gave an interesting talk on carburetion and the new film produced by the Department of Commerce and the Cadillac Motor Car Co. was shown. Nominations of officers for the year 1923 were announced, these being Edward J. Rabidoux for president; J. W. Lord, W. A. Evans, Charles Michaels and T. E. Sweigert, vice-presidents; L. T. Hanford, treasurer; Al Bargmann, secretary, and Dale P. Cartwright, Henry M. Holt, Harry L. Ferris, H. P. Cruse, J. Howard Pile and Ralph C. Rognon for directors.

Springfield Talks Service

SPRINGFIELD, MASS., Dec. 14 — The Automotive Service Association of Springfield held the largest meeting in its history at the Technical High School Auditorium, more than 100 dealers and service men attending. The features of the evening were the presentation of a number of reels of film, including the Paige-Detroit dealer film and the "Shop Profits" film of the A. E. A. J. Howard Pile, Technical Editor of Motor World, told of the progress made in service from the viewpoint of the factory, dealer and owner. Other speakers included former President Darnstat of the Service Association of Springfield, present officials and the principals of the Technical High School.

Fort Wayne Reorganizes

FORT WAYNE, IND., Dec. 15—A. L. Randall has been elected president of the Fort Wayne Automobile Trade Association at a reorganization meeting. Other officers elected are Roland Fitch, vice-president; William Wallace, treasurer; W. S. Becker, C. B. Hayner and W. C. Prange, directors.

It was decided at the meeting that the automobile show will be held during the latter part of January or the first of February if a suitable downtown showroom can be secured. A committee will be appointed in the near future to plan the details.

A big step in the reorganization of the association will be taken with the employing of an association secretary on a salary.

Brooklyn Service Men See Film

BROOKLYN, Dec. 15—The December meeting of the Automotive Service Association of Brooklyn was featured by the new Cadillac motion picture film which was prepared in co-operation with the Department of Commerce.

Representatives of the New York and Detroit offices of the United Motors Co. spoke on standard factory equipment as distinguished from pirate replacement parts. In the discussion that ensued dealers and service men felt that the greatest incentive to the use of pirate parts was the lack of uniformity of prices among different car manufacturers and assemblers.

Following the regular meeting the members were served with strawberries and cream provided by one of the members.

Illinois Association Revived

KEWANEE, ILL., Dec. 15—The Henry County Automotive Trade Association, which has been non-active for several months, has been revived. James Levy, president of the James Levy Motor Co., Buick distributor in Chicago, spoke on "Automobile Business and Automobile Business Ethics." The meeting was a jubilee of the completion of the northern county's hard road system. W. E. Soderberg, Galva, president of the association, was in charge of the meeting, and to insure its success he had appointed an "attendance" committee, which canvassed the county to invite dealers.

Houston Would License Drivers

HOUSTON, TEX., Dec. 19—The Houston Automotive Trades Association has started a move to reduce the number of automobile accidents, and to this end is urging the passage of an ordinance requiring the licensing of every person who drives an automobile. This would keep children from driving cars. The association wants every driver of an automobile or truck in Houston to stand an examination which would show that he is capable of using good judgment in emergencies.

New Syracuse Secretary

SYRACUSE, Dec. 15—C. H. Hayes has been made executive secretary of the Syracuse Automotive Dealers Association, succeeding Howard H. Smith, who recently resigned.

JOBBERS IN NEW YORK PLAN DEALER MEETING

NEW YORK, Dec. 18—Vaudeville, music and the showing of the "Ask 'Em to Buy" and "Shop Profits" films are part of a program for dealer, garage and repair men, Jan. 10, which is during New York show week. The event will be held at Carnegie Hall under the auspices of the Metropolitan jobber members of the Automotive Equipment Association.

The meeting, which is scheduled for 1:45 in the afternoon, will be free to all men in the retail field, and tickets may be obtained through the jobbers. Should the visitors to the New York show come from points beyond the Metropolitan district, they can get tickets from Robert L. Sim of the Whittemore Sim Co., 346 West 65th Street. Sim is chairman of the committee of management.

Charles E. Brenner Dies

PEORIA, ILL., Dec. 15 — Charles Emory Brenner, credit manager of the Avery Co., is dead from aneurism of the heart. He joined the Avery company in 1905 as assistant sales manager, was promoted to sales manager in 1909, and was a director of the Avery company from 1907 to 1914. He was made credit manager in January, 1921.

CHANGES IN THE TRADE

Murphy-French Automobile Co., Sioux City, has taken over the Studebaker agency.

Ross Walton Co., Philadelphia, distributor of Oldfield tires, has removed to the Guaranty Industrial Building.

H. M. Springer, formerly of Spokane, has been transferred to Des Moines as manager of the B. F. Goodrich Co.

W. J. Brown Motor Co., Inc., Shreveport, La., has taken on the Hupmobile for that part of Louisiana and East Texas.

Goff-Caughman Auto Co., Columbia, S. C., has been appointed to handle the Velie in Richland and four adjacent counties.

Van Dusen Motor Sales Co., Inc., will hereafter be known as Bernhardt Motors, Inc. It will be located at 1241 Main Street, Buffalo.

Dornette Motor Car Co., has been appointed Davis distributor in Cincinnati. John Dornette, Jr. is president of the company.

Charles Warfield has been appointed Haynes district sales manager for the States of Utah, Wyoming, Colorado and the Kansas City territory.

Firestone Tire & Rubber Co., Philadelphia, has taken new quarters in the Guaranty Industrial Building, Chestnut and Twenty-fourth streets.

Merrill E. Stevens, former Nash dealer at Sioux City, has become sales manager for the **J. V. Thorndike Co.**, that city. **Fleming Motor Co.** now handles the Nash.

Firestone Tire & Rubber Co. has opened a branch in Springfield, Ill., from which both wholesale and retail business will be directed. **E. D. Olinger** is branch manager.

S. L. Kirby has been appointed district salesmanager for the Peerless Motor Car Co. in New Jersey. He has been assistant manager of the Buick Philadelphia branch.

Northampton Buick Co., under the direction of **E. J. Foley**, will attend to the selling and servicing of the Buick in Northampton, Mass., having opened in the new Gleason garage.

Chester R. Giddings, formerly of Providence, R. I., has taken the Dort and Liberty agencies for Hampden and Hampshire counties, Massachusetts, with headquarters in Springfield.

William T. Bush, for several years a sales executive of Studebaker and Packard, has resigned as director of sales of Gray Dort in Canada. His plans for the future have not been announced.

Dort Motor Car Co. has appointed the **Hudson Motor Car Co.** of Louisville, Ky., distributor covering most of the state of Kentucky. **J. L. Jennings Motor Co.** of Abilene, Tex., has been appointed to cover parts of Texas.

G. E. Bovis, formerly of Chicago, where he served as branch manager of the **McGraw Tire Co.**, has joined his brother, **John Bovis** at the **Bovis-Oldsmobile Co.**, Cincinnati, where he will have charge of the wholesale department.

Charles M. Fitch, for several years manager of the **Falls Motors Corp.**, Sheboygan Falls, Wis., has taken a position with the **Nordyke & Marmon Co.** of Indianapolis, in general charge of the body manufacturing plant it is building.

Crispin-Rich Co. of Syracuse are now the central New York distributor for Moon cars and are handling this line exclusively. **Schall-Crouch Auto Co.** of Baltimore will handle the Moon exclusively from now on as the Maryland distributor.

Steve M. Solomon, Jr., of Macon, Ga., has purchased the interests of his partner, **Kingman Moore**, in the **Kingman Moore-Steve M. Solomon, Jr., Co.**, Dodge Brothers distributor, and the business now is conducted under Solomon's name only.

William H. Taylor, formerly president of the **Overland Motor Co. of Chicago**, has succeeded **Frank T. Windle** as manager of the St. Louis Overland branch. Windle has been named as a sales supervisor, working under direction of the Toledo factory.

C. C. Davis has purchased interest of his partner, **W. W. Culver**, in the **Davis-Culver Motor Co.**, Galesburg, Ill., and will continue the business under the name **C. C. Davis Motor Co.** The firm is Studebaker distributor in two adjoining counties.

R. C. Sackett, vice-president and general manager of the E. S. Gahagan Co., Cincinnati Studebaker distributor, has resigned and left for Grand Rapids, Mich., to take over the distribution of the Studebaker line in that city and surrounding territory.

Oscar M. Brede has been promoted to the position of assistant sales manager of **Hinkley Motors, Inc.**, specializing in the replacement end of the business which the company is now developing. He will also retain general charge of the service department.

C. L. Hatfield, Decatur, Ill., has purchased the **Good Bros.** tire and battery station, the oldest exclusive automobile tire dealers in the state outside of Chicago. Hatfield will continue to handle the Federal and Mansfield tires and tubes and the Vesta batteries.

A. H. Vayo, Omaha, has been appointed distributor for the Barley Motor Car Co.'s complete line for Nebraska and counties in western Iowa. **Pittsburgh-Templar Co.** of Pittsburgh has been appointed to cover western Pennsylvania and eastern cities. **J. C. Freeman** is head of the concern.

Kaye E. Paulus, an employee of the Richardson-Phenix division of S. F. Bowser & Co. offices, Fort Wayne, Ind., for the past year, has been appointed district manager of the New England States for this division of the company. His headquarters will be in Boston.

Haynes Automobile Co. announces new distributors as follows: **Robin Brothers**, Montreal, Quebec; **Coolbaugh-Macklin Motor Co.**, Philadelphia; **Levand Automobile Co., Inc.**, Houston; **Roth Motor Co.**, Louisville; **Kent-Horn Co., Inc.**, Duluth, and **A. H. Vayo & Co.**, Omaha.

W. J. Kallis, connected with the automobile business in Atlanta almost since its inception and probably one of Georgia's best known dealers, has entered the real estate field at West Palm Beach, Fla. For years he was branch manager in Atlanta of the **Southern Nash Co.**

Buick Motor Co.'s Atlanta office announces the establishment recently of the following new Buick dealers in the Southeast: **McMinnville Buick Co.**, McMinnville, Tenn.; **Riddle Buick Co.**, Walterboro, S. C.; **Tazewell Buick Co.**, Tazewell, Tenn.; **J. O. Morgan**, Brunswick, Ga.

W. H. Chambers of Atlanta has been named vice-president of the **Lifsey-Chambers Co.**, Peerless distributor, the company being known as the **Lifsey-Hill-Smith Co.** prior to Chambers' affiliation. **Julian Lifsey** remains as secretary and treasurer, and **Dr. T. P. Hinman** is named president.

Clyde H. Pinney, formerly with the New York branch of the Vesta Storage Battery Co., has become associated with the **H. B. Shontz Co., Inc.**, of New York City and will have charge of the sales of the Lincoln shock absorbers, the distribution of which has just been taken over by the H. B. Shontz Co., for the Metropolitan district.

Garth Motor Co. of Birmingham, distributor for the Gray and Rickenbacker cars, has been given a portion of the Mississippi territory, in addition to its Alabama territory, for the distribution of the Gray car. This territory includes a portion of northeast Mississippi, in which the cities of Starkville, Columbus, West Point and Aberdeen are located.

C. H. Becker has resigned as sales manager of the Saxon Motor Car Co., Detroit, to become general manager of the **J. W. Goldsmith, Jr., Grant Co.** of Atlanta, Hudson and Essex distributor, to succeed **Samuel C. Porter**, who resigned to assume the presidency of the **Porter-Minehan Co.**, a new dealer organization. Before going with the Saxon company, Becker was identified with the **Joseph G. Blount Co.** of Atlanta for several years.

A. J. Stewart has resigned as general manager of the **Midwest Tire & Sales Co.**, Quincy, Ill., to become district manager in the Illinois and Missouri territory of the **Iowa Cork Tire Co.**, Des Moines. He will continue his headquarters in Quincy. **Frank H. Kathman**, secretary-treasurer of the Midwest company, will take over duties of president and general manager of the company and **Henry A. Ippenson** has been made assistant manager in the organization.

W. W. Barnett, Oldsmobile distributor for the Denver territory and for 16 years associated with the automobile trade in Colorado, Wyoming and New Mexico, has sold his business to **Spain-Skinner, Inc. T. H. Spain**, for the last three years actively identified with the Dodge Brothers agency in Denver, is president of the new company, and **Lewis B. Skinner**, formerly one of the owners of the Western Chemical Co., is secretary and treasurer. Barnett, who is regarded as the dean of the trade in Denver, first handled the Stoddard-Dayton in 1906. For the last ten years he has represented the Oldsmobile. He was an organizer as well as one of the first presidents of the Denver Automotive Trades Association.

Dort Sport Models

FLINT, MICH., Dec. 14—Dort sport models, both on the four and six cylinder chassis, in the future will be finished in light blue with nickeled trimmings. The equipment includes disk wheels, front bumper, windshield side wings, windshield wiper, drum type headlamps, cowl lamp, spot lamp, combination stop and tail lamp and Moto-Meter with a locking device. Spanish leather will be used on the upholstery, and the top is extra heavy khaki-colored material.

Southern Truck Resumes

GREENSBORO, N. C., Dec. 15—The Southern Truck & Car Corp. has been completely reorganized and has resumed operation. Dr. W. P. Knight is president of the company and C. E. Lowe secretary, treasurer and general manager.

OREGON COLLEGE HAS COURSE IN MECHANICS

PORTLAND, ORE., Dec. 16—Portland's regular winter course in automobile mechanics, held under the auspices of the extension department of the Oregon Agricultural College, opened this month with the largest enrollment in its history.

The course is open to all journeymen mechanics of Portland and vicinity, without charge, and is held one evening each week for two hours, from 8 to 10 P. M., when lectures, illustrated with lantern slides, diagrams and, in some cases, actual parts, are given. The course will continue until April.

Pierce-Arrow Sales Gain

BUFFALO, Dec. 18—In the first 11 months of 1922 passenger car sales showed an increase of 40 per cent over the corresponding period last year, reports the Pierce-Arrow Motor Car Co. In the last half of the year it is estimated that the gain over the last six months of 1921 will be close to 90 per cent. Truck sales up to Dec. 1 of the current year were 65 per cent more than those of the 1921 period.

Cadillac Not to Close

DETROIT, Dec. 18—Because of the large increase in business following its recent price cut, the Cadillac Motor Car Co. will not close for inventory two weeks the first of the year, as planned. Instead H. H. Rice, president, said the company will continue at full force and additional workmen will be taken on.

WILLYS PLANS 45,000 IN FIRST QUARTER

TOLEDO, Dec. 14—"We hope that next year will be the greatest in the history of the Willys-Overland Co.," declared John N. Willys, president, before a group of business men here. "Our inventory has been taken, and we are planning to produce 45,000 automobiles in the first quarter. This means we will have 15,000 or 16,000 men employed before April 1."

King Receivership Dissolved

DETROIT, Dec. 18—Because of the the King Motor Car Co., ordered in 1920 as a result of a voluntary bankruptcy declaration, was dissolved this week in Circuit Court here.

WILLIAMS ACCELERATOR
for FORD CARS

PRICE
$3.00
AND WORTH IT

QUALITY

THE WILLIAMS ACCELERATOR needs but little sales argument. Its sturdy, clean-cut construction speaks for itself. Its lack of complicated parts and extra attachments is readily seen. Its simplicity of installation and operation is apparent at a glance.

These are reasons why the Williams has always led in the accelerator field—the sales increasing 100 per cent each year. They are also an assurance that the sales will continue to increase. Write us for details. Order from your jobber.

NO-LEAK-O Piston Rings

THE GROOVE THAT CANNOT CLOG

Move From Your Shelves

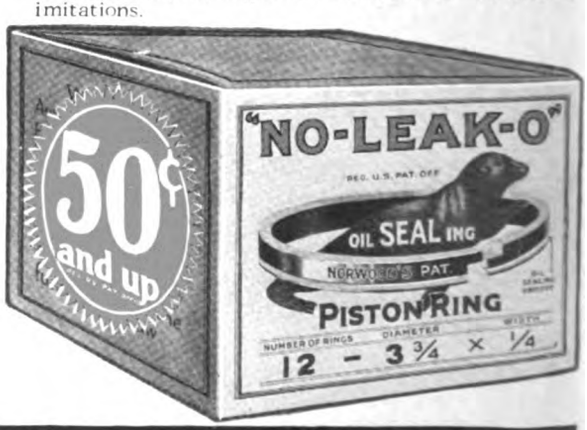
No-Leak-O Piston Rings are easy **to sell because:**

1 - they have made *good.*
2 - they are widely *distributed.*
3 - they are nationally *advertised.*

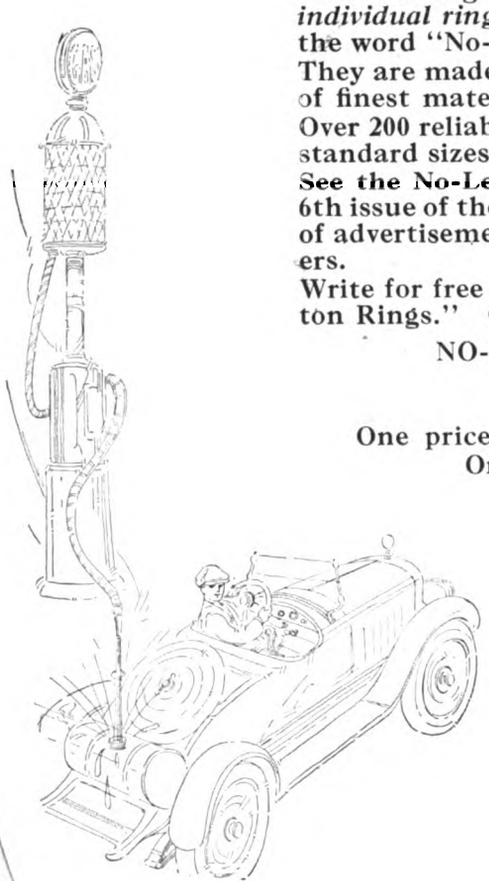
No-Leak-O Piston Rings are the first **and only piston** ring to have the patented "oilSEALing" **groove. This groove** packs an impassable oil film in between **piston and cylinder** walls which gives *perfect oil control and compression in each individual ring.* Every genuine No-Leak-**O Piston Ring has** the word "No-Leak-O" stamped in the ring.

They are made in one piece—easy to install—**quick seating**—of finest material—guaranteed against **breakage.**

Over 200 reliable jobbers carry No-Leak-**O Piston Rings in all** standard sizes and *over* sizes.



See the No-Leak-O full page advertisement in the January 6th issue of the Saturday Evening Post. It is one of the series of advertisements which is building a good business for dealers.



Write for free booklet, "Know the Facts About Grooved Piston Rings." Get our liberal dealers proposition.

NO-LEAK-O PISTON RING COMPANY
Dept. T-46
BALTIMORE, MD.

One price during eight years of continued success
One design—for all cars—50c and up

Important: In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

NO-LEAK-O

WON'T LEAK
because they're sealed with Oil

Oldsmobile in Fort Wayne, Ind.

"We believe the Oldsmobile to be the most complete line of any automobile manufactured today. The Four is the outstanding car in its price class. The Light Eight of course is in a class by itself. This opinion is based on ten years' experience in the retailing of passenger cars, during which time we have sold a number of different makes, including some of the most popular lines on the market today."

—HANKE MOTOR CAR COMPANY
WM. HANKE

October 22, 1922

No need to lose sales to competitors for lack of a complete line, if you are an Oldsmobile dealer. The Oldsmobile franchise equips the dealer with both Fours and Eights—fifteen up-to-date body models. He has a splendid Four roadster at $955 for one prospect, and the luxurious Eight sedan at $2,025 for another. Between these two types are a range of models with all the traditional Oldsmobile attractiveness and appeal.

With such a variety of cars, the Oldsmobile dealer is in a position to sell his customers not once, but several times—keeping pace with their increase in buying ability as time goes on.

And in the Oldsmobile Economy 1-ton truck he has still another source of profitable business—but under the same contract, with the same advertising message, and the same parts account.

Is it any wonder that with such a line of merchandise, and backed by the unequalled General Motors financing plan, Oldsmobile dealers are successful dealers?

Why not start the new year as an Oldsmobile dealer? We may have just the opening you want. Communicate with us today.

The 1923 Car Is the Most Salable Car Ever Built. It Will Help the Trade to

Make the 1923 Show Season a Selling Season

Show Committee, Dealer and Salesman, Working Together, Can Make It the Biggest Show Season

IF your automobile show is so well staged that people attend it in great throngs and make it the week's chief topic of conversation——

If your exhibit in the show is so attractive that your booth is filled with interested people much of the time——

If your salesmen on duty at the show take full advantage of the opportunity to make sales and prospective sales——

You will say, won't you, that the automobile show is a business builder?

The automobile show has been a business builder in this country for more than twenty years. It has centered public attention on the motor car by displaying hundreds of cars—the products of the entire industry—under one roof at one time. It has enabled individual dealers to show their cars to many thousands of people who could never have been reached in any other way. It has given individual salesmen a chance to put new life into their prospect lists and new vigor into their selling by providing the opportunity for fresh contacts with buyers under the favorable influence of show-time enthusiasm.

The shows through all these years have been business builders. There are many reasons why the 1903 show season can be made the most profitable show season in the history of the industry.

1923 Cars Are Show Cars

THE first reason is the 1923 car.

The 1923 car is the most salable car ever built. It is the lowest priced car ever built. This is a big factor in its salability. When the factors of greater durability, better looks, easier operation and lower upkeep cost are added the 1923 car reaches a high degree of salability.

The 1923 shows will present to the public cars built on the foundation of thirty years of experience in automobile design and production. As never before, after the shows have had their day, "everybody" will want an automobile.

The 1923 car will do its part in the 1923 shows. A study of the 1923 cars already on the market and of others to make their first appearance at the shows settles that point. The rest of the show job is yet to be done—by dealers and the committees representing them in the show management, by salesmen who will man the exhibits.

That's the show committee's job, which every dealer taking exhibit space can help by co-operation that ought to rate 100 per cent at show time if it fails to come up to the mark any other time of year.

What Dealers Can Do

WHAT must a dealer do to make the show a business builder for him? Some dealers answered this question several years ago; others have it half answered; some, newer in the field, are looking earnestly for plans that will yield them cash results on the 1923 exhibits. The individual dealer, in addition to putting the shoulder of co-operation behind the general show task, has a job for himself to make his exhibit a "high spot" in the show and to build patronage on the attraction his "high spot" has for the general public. He may be able to make his exhibit look a little more attractive than others, with displays of special models or with a striking dress of his booth with show furniture. That will help, but the dealer's big job is to sell his car and his organization, before the doors open, as a "high spot" in the show, to keep them sold throughout the show and to follow up this selling with after-show work of an intensive character. While the show committee is promoting the show the progressive dealer will be promoting his exhibit in the show. He will keep the promotion up right through the show. And in the show itself his sales force will be selecting prospects from the show crowds, interviewing them, selling some of them, listing and classifying others and making the exhibit for the time being a sales headquarters, and a hard working one at that. After the show the dealer will con-

Digitized by Google

duct the fastest sales campaign of the entire year, to turn the show interest of as many prospects as possible into buying interest.

What must a show do to be a business building show? Show committees and managers will be asking themselves this question throughout the next few weeks. First, a show must cause talk. Unless the general public can be got to talking about the show, long before it is held and right up to the time the doors open and until the doors close, it will not be a success. Promotion and a well-staged show will bring about this result. Promotional publicity—lots of it—will make everybody think about an approaching show and talk about it; will help to keep up the talk during show week. Good staging—a well-dressed, bright show exhibiting a wide representation of the industry's products—will finish the job. It will send first nighters out around town telling everybody they meet about "the best show Our town ever had," assuring large attendances, the first essential of show success, for the rest of the week.

The Salesman's Opportunity

THE salesman's opportunity in the show is as broad as the dealer's. He can work up prospects before the doors open, discover new ones while the show is in progress and turn many of them into buyers when the close of the show frees him for canvassing work.

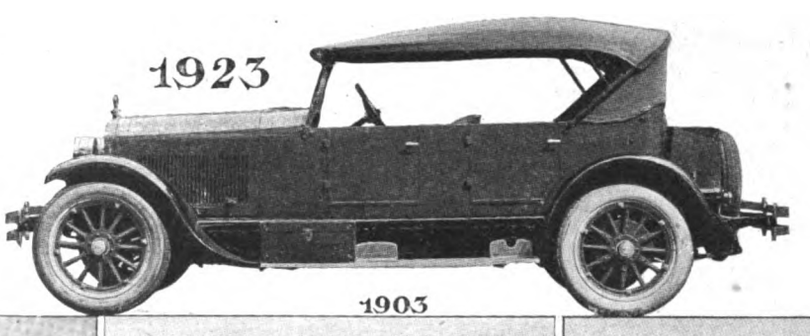
There is much for show committees, dealers and salesmen to learn in the experience of men in the trade in past show seasons. There have been mistakes which should be avoided and conspicuously successful methods which can be imitated or improved upon. But show committees, dealers and salesmen haven't the time to go about the country studying the shows that have gone before.

Motor World has been studying shows and show methods and in this Before Shows Number is presented practical information for the trade on automobile showmanship. There are ideas for the show committee, the dealer and the salesman. Motor World readers are invited to study and make use of them.

The show season will start in New York, as it has for many years. Under the auspices of the National Automobile Chamber of Commerce the twenty-fourth annual show will be held at the Grand Central Palace Jan. 6 to 13, opening and closing on Saturday. The Chicago show, also a manufacturer's exposition, will open three weeks later in the Coliseum. There will be big city dealer shows—in Philadelphia, Detroit, Baltimore, Cleveland, and Milwaukee—between the two national shows and after these, continuing until far into March, and in some cases into mid-April, shows in cities great and small, some in communities that cannot boast the title of city.

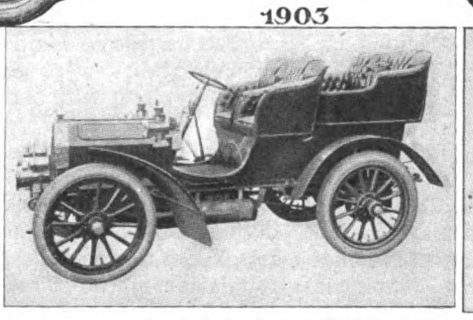
Make Them Selling Shows

ALL these shows, large and little, are part of the great selling system that moves motor cars from the factories to the highways. They have played an important part in this system in past years. They are looked to to carry on their share of the selling job again this year.

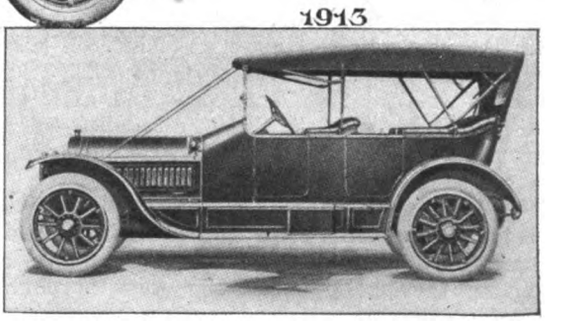


Will your town be in line with a 1923 show? Will it be a *selling show*? Will it recognize the selling power of a spectacular, yet dignified, presentation of the automobile as an essential in the transportation system of the country and as a part of the life of the people?

Will you be in the 1923 show? Will your car and your organization be among those that the show crowds will see and talk about? Will your salesmen, realizing how the already keen edge of competition has been sharpened by the production of so many salable automobiles, take a place just a little ahead of some other salesmen in presenting your cars to the big, interested crowds at the show?



Co-operation Is Needed



THE curtain will go up on the show season in a few days. Men in the automotive trade will find themselves once more in the glare of lights, the hum of voices, the good dress and the good nature of the public exposition. Within reach of their hands and their voices will come many thousands of people who are to become owners of new motor cars.

The prospect is bright. The sales opportunity awaits. The 1923 car is the most salable car ever built. Working together, show committee, dealer and salesman can make the 1923 show season the most interesting and profitable show season the industry has ever held.

Big Business Year Just Ahead for the Automotive Trade

Nothing Miraculous in 1922's Record Production—Why the Business Will Continue to Grow

By Neal G. Adair

THE automotive industry has made two and a half million cars and trucks this year and the whole country is asking who bought them.

Some of the year's products, as always at this season, are in the hands of manufacturers' branches, distributors and dealers. The great bulk of the huge output, however, has passed into the hands of users. No wonder men in the industry, even, are among those who want to know who bought these cars and trucks.

To say that all kinds of individuals and corporations bought them answers the question truthfully but it fails to give any valuable information. Ask why all these vehicles were bought and a question is raised that leads toward an answer with real meaning.

Seven Reasons for Big Sales

Seven reasons for the unprecedented sales of 1922 can be advanced. They are:

1—*Generally improving business conditions.* In a year the country has progressed from a condition which prompted the President to call a conference to relieve unemployment, to one in which jobs are going begging. Virtually no other business has come back as fast or as far as the automobile business, but nearly all have undergone sufficient rebuilding to boost the country's buying power in wonderful shape.

2—*The halt in buying late in* 1920. When after-war depression hit the United States buying of cars and trucks stopped almost as though at the wave of a hand. Logical buyers of late 1920, even those who had money in hand to buy with, held off through fear of panic conditions.

3—*Delayed buying in* 1921 *due to high prices.* After the blow to business dealt in 1920, with successive blows delivered in 1921, buying power couldn't do much better than stagger along and it wouldn't pay what were popularly regarded as high prices—for anything. Automobile manufacturers began reducing prices in the fall of 1920 and there were cuts from then on through 1921, but it was not until late 1921 that the reductions were large enough to start a buying movement which got under way too late in the year to affect materially the 1921 sales volume.

4—*The drop in prices early in* 1922. This movement began with the New York show and, after a flurry of uncertainty on the part of the public, which looked for further immediate reductions, gave the spring buying season a tremendous impetus.

5—*Price reductions periodically throughout* 1922. When some of these cuts came in mid-summer, in some cases on cars whose dealers were unable to supply immediate demand, the public apparently was thoroughly convinced that rock-bottom prices had been reached and that motor car values had risen to new heights on the sound economic basis of manufacturing economies.

6—The sixth reason, *belief on the part of some prospects that prices might be raised in* 1923, was a natural outgrowth of the price reductions of the year.

7—Finally, *extension of time payment facilities* gave buying rapidly gaining momentum throughout the year. Improvement of the general business situation and particularly the liquidation of frozen credits enabled banks and acceptance corporations to accommodate more installment payments and the organization of some additional financing companies and the expansion of others contributed to the growth of this class of buying.

The conditions outlined in these seven reasons undoubtedly played an important part in building up the year's great volume of sales. Back of them, the well built passenger car of to-day was making its appeal to a public in which "everybody wants an automobile" and the truck was demonstrating its permanency in the modern scheme of transportation.

No doubt the eagerness of the trade to accept old cars in part payment for new, a practice which grew with the year's growth of the industry, was a factor of weight in the business of the year. Appealing new cars, at appealing prices, proved too great a temptation to many thousands of owners of good but used cars, and the trade-in, which has left a large supply of used cars in dealers' hands to carry into 1923, was the basis of a huge volume of new car sales.

The Outlook for 1923

Now the industry is on the threshold of another year and men in all branches are wondering what it will bring forth.

If any great proportion of delayed 1920 and 1921 sales and advanced 1923 sales were crowded into 1922 the coming year might be a slim one, but there is no reason to expect such a turn in events.

Business in general is still going forward, which seems to assure a general foundation of prosperity for the automotive industry. And regardless of how many sales of adjacent years were jammed into 1922 the replacement business alone will demand a considerable production in 1923.

No one has fixed the life of a car, though some authorities have stated it as six years. Even if it were twelve years, a million cars and trucks logically would be required to take the places of those which would be junked in 1923 out of the registration of nearly 12,000,000 vehicles. The population of the country is growing and so is its wealth and the average increased motor vehicle registration of

Digitized by Google

the past few years, something over a million, is likely to be maintained, creating a demand for another million cars and trucks. The country most likely will want another 2,000,000 new motor vehicles, at least, in 1923, and combined car and truck production, in view of the increasing use of trucks, is not likely to go below two millions, and more probably will attain within a quarter of a million of this year's two and a half million mark.

The industry may not set a new record in 1923—probably will not—but 1923 will be a big year.

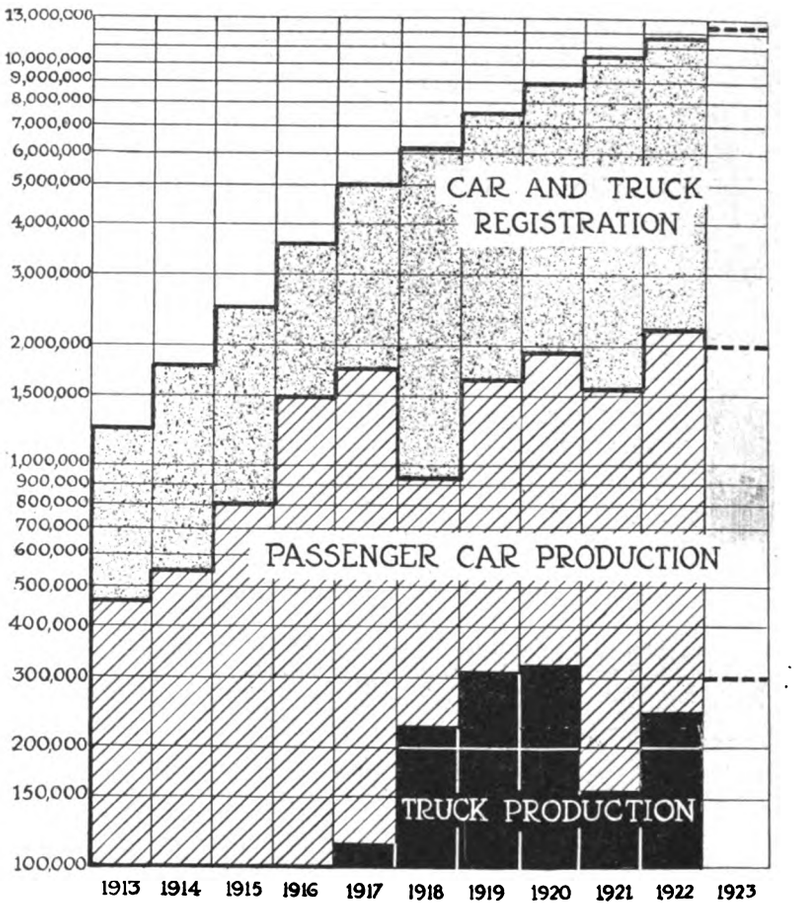
The maintenance and equipment divisions of the business have as bright an outlook. More than a million cars and trucks were added in 1922 to the registration. Nearly twelve million vehicles will be calling next year for repairs, adjustments and, in some cases, rebuilding. Nearly twelve million vehicles will be calling for tires and other supplies to keep them running. Nearly twelve million vehicles will be exposed to the salesmanship of progressive dealers and garagemen ready to equip them with accessories designed to add to their utility or operating efficiency or the comfort or convenience of their drivers.

The industry has built this year $1,558,000,000 worth of cars and trucks, wholesale value, as compared with a total value of $1,260,000,000 for the 1921 production. Translate the 1922 figure into retail valuation and it almost reached two billion dollars. That figure constitutes a tremendous business, done by the branch houses, distributors and dealers of the United States, with some subtraction, of course, for export sales. But it is only part of the picture. If we may estimate next year's car and truck business on a retail basis at two billion dollars it is conservative to say that in maintenance work, parts, accessories and tires the trade will do another three billion dollars' business, making a total of five billion dollars' turnover as the basis of 1923 profits.

But the automotive industry cannot stand alone. American industries are interdependent and the nations of the world are interdependent, so it is necessary, in attempting to look ahead into 1923, to consider the general American business situation and, to an extent, affairs across the sea.

Problems of German reparations, Near East settlement and other foreign complications make it apparent that the United States cannot expect next year any such increase in export business as would be necessary to set American industries going full tilt, but the situation in general is more hopeful than the opposite.

On this side of the water the indications point plainly to further stabilization, though the wisest business advisers advocate continued caution. The National Association of Credit Men has issued this statement:



"An acceleration of trade movements has given the impression that our problems are nearing solution; that we are out of our troubles. Judging the stability of trade movements by surface appearances is not wise. Though we have made decided improvement in our general condition as viewed by the side of the two previous years, yet it would be a serious mistake to feel that our problems are over and the full swing of prosperity has come.

"The pleasantness of relying on favorable symptoms may induce a lack of effort that is needed above all things at this time to bring us fully through our difficulties."

The statement is conservatively precautionary without being pessimistic. One of the great banks, in an equally conservative pronouncement, declares that the country in 1922 "has made great progress toward a condition of industrial, mercantile and credit stability."

There is much meaning for the merchant, large or small, in these statements. They emphasize necessity for prudence in borrowing and buying, yet they hold out promise of a profitable year for the business man who will study his market and develop its possibilities.

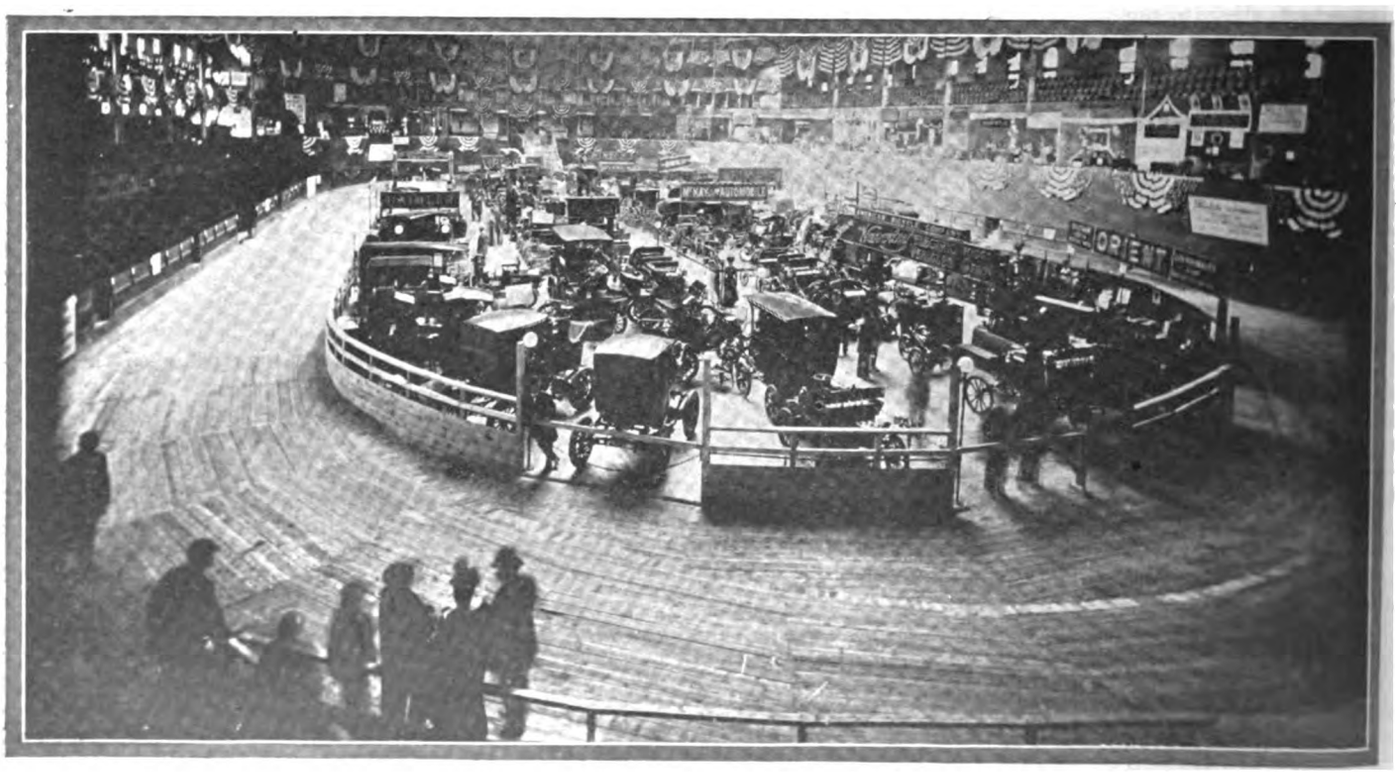
In every branch of his business the automotive man, whether he sells merchandise, or service, or both, needs to study his field as a basis for wise buying; he needs to make his organization one that serves his trade and builds more trade by serving; he needs to appreciate as older trades have learned by years of experience to appreciate the value of good will.

A 10 Years' Picture of Automotive Transportation and Production

THE graph shows the growth of motor vehicle registration and passenger car and truck production from Jan. 1, 1913 to Dec. 31, 1922—10 years—and forecasts the same figures for 1923.

Note how steadily registrations have grown—the increases are like a set of stairs. Passenger car production has had its ups and downs dependent upon countrywide business conditions but each five year period has shown a gain and the increase over the entire 10 year period is from less than half a million to two and a quarter million cars. Truck production, reaching its highest point in the post-armistice boom period, is on the up grade again.

The dotted lines show estimated production for 1923. They are only estimates at best but well informed authorities are agreed that the country will have nearly 13 million motor vehicles registered at the end of next year and that while truck production probably will reach 300,000, passenger car production most likely will fall little if any below two million.



The bright future of the industry is seen in the top line—the steadily increasing use of motor transportation.

1900 - - - - A Picture Story of Twenty-Three Years' Progress

REMEMBER the good old days of "Git a horse!"? Folks were skeptical about these "new-fangled hoss-less carriages" and they had to be shown. And remember how we showed 'em? We built a track around the exhibit, pushed a car out on it—breathed a prayer that the temperamental cusses wouldn't balk—and proceeded to prove that they ACTUALLY WOULD RUN. And remember how we put barrels in a double line and "snaked" along between 'em to show the doubting Thomases that you could steer 'em around anywhere—just as easy as driving a horse?—Yep, they were SOME days—those good old days of "Git a horse!"

Digitized by Google

as Told in the New York Automobile Shows - - - - - 1922

TWENTY-THREE years' development has established the dependability of the motor car—has crowned it King of Transportation. And now, in royal splendor, it accepts at the shows the homage of the multitude. Folks know and respect the motor car today because it has become indispensable in every phase of civilization—and everybody wants one. Twenty-three years have surrounded it with the dignity of a great institution—and the shows today reflect, in a striking way, the progress that has been made. The cry of "Git a horse!" has changed to "Get a car!"

Reilly Talks—

By Neal G. Adair

To Tommy Trumbull

About Show Smilers

THE Callawassa Automobile Show was to open in two weeks. C. J. Reilly, Inc., had drawn a fine central space to show the Sennett and the head of the house was talking over arrangements with Tommy Trumbull, general manager of everything and everybody around the place except Reilly himself.

"How many salesmen will we have on the job?" Reilly asked.

"Eight," said Trumbull.

"They can swing the job, but can they swing it with a smile?" Reilly suggested.

"Meaning—?" Trumbull questioned.

"Endurance," Reilly replied. "A show crowd gets tired and looks tired. Salesmen in the show get tired but they mustn't look it. The only way to keep 'em from looking it is to keep 'em from getting downright dog-tired."

"But with eight men we can have two on the job in the morning, three or four in the afternoon and six or seven at night and still work 'em only eight hours out of the twelve the show is open," said Trumbull.

"Too long," said Reilly. "Eight hours a day for eight days on a show floor—almost in the class of cruel and unusual punishments."

"Does seem long when you look at it that way," Trumbull admitted.

"Is long," said Reilly. "Don't forget a show's nothing but a show to the crowds. They don't think of the men in the exhibits as working; they're just part of the show. And a show is something people go to for pleasure, sightseeing, the thrill of the colors, the lights and crowd and so on. Build a fence around an exhibit and you wouldn't keep people out any more effectually than you would by manning it with a tired, listless, I'll-be-glad-when-the-lights-go-out crowd of salesmen."

"But we've only got eight men on the staff," Trumbull protested.

"Draft a couple more—Kelly from the service station and Jarvis from the demonstration job, maybe. School 'em a little and they'll do for off-hour fillers," Reilly suggested.

"Not so bad," said Trumbull.

To George Roper

About Getting Names

"AND the big job, Georgie, is to get names," said Reilly.

"Names?"

"Names—real names and real addresses."

Reilly and his head salesman, George Roper, who had been appointed exhibit manager for the show, were talking over the big job ahead.

"Yes, sir, names," Reilly continued. "We don't care much who the people are who drift by and just take a squint at our cars as they do at everybody else's, but when a fellow, maybe, with some of his family, comes into the booth and shows some real interest we want to know who he is."

"Ask him, that's one way to find out," Roper said.

"One way, but not always the right way," Reilly answered.

"But how else—," the salesman began.

"We got quite a few fake names and addresses last year, didn't we?" Reilly observed. "And some likely looking folks turned us down entirely; wouldn't tell us a thing."

Roper nodded.

"Let's try something new this year—on some of the likeliest looking ones," Reilly continued. "Don't scare 'em off by asking their names. Try getting them by diplomacy. Suggest that we have back at the salesroom some big, finely illustrated descriptive books on the Sennett that we are glad to mail to people who are interested in the car. Then ask the prospect for his business card so that we can send the book. Incidentally when Mr. Prospect gives you his card, hand him yours."

"Suppose they'll fall for it?" Roper asked.

"Try it," said Reilly.

To Tim Kelly

About Demonstrators

"WE'LL be doing some demonstrating show week, Tim; maybe a little more than usual," Reilly remarked one morning as he dropped into the neat little coop where Kelly had his office.

"I'm ready," the service manager said, and added, "We're always ready."

"Might be a little more so show week," Reilly suggested.

"How come?"

"Guess I've never had to kick about our demonstrators," Reilly continued. "They're kept a hundred per cent up to snuff or thereabouts. But maybe we could put 'em in a hundred and fifty per cent condition or something like that—what?"

"Maybe, but—," Kelly started to object.

"Look at it this way," Reilly interrupted. "Our cars in the show, in a setting of bright lights, brilliant decorations, flowers, rugs and Sunday-go-to-meeting togged salesmen look like a million dollars, don't they?"

"Sure do, why, last year—," Kelly began with kindling eyes.

"Never mind last year, let's see what we can do for this one," Reilly broke in. "Let's follow a prospect from the show to a demonstration—in a Sennett. He has the show picture of the Sennett, bright as the best January morning you ever saw. 'What a beauty,' his wife said as they looked at the sedan, and Mr. Prospect seconded the motion. Then comes the demonstrator, minus bright lights, decorations and all the other show accessories. It will have to be a pretty trim looking demonstrator, and a pretty sweet running one, to get by, won't it?"

"You said it," Kelly agreed. "Watch me—show week."

To Henry Bennett

About Henry Bennett

HENRY BENNETT, the Redman dealer, had been exhibiting in the Callawassa show since the first one was held twenty years ago. So had Reilly. Both had entered show after show, Reilly always with enthusiasm, Bennett invariably with the protest that he had to show because his competitors did. That's the way Bennett entered the shows—as a pessimist. The fact that he had finished each one with a creditable list of sales and prospects made no difference to Bennett. Long ago Reilly had given up hope that Bennett would ever admit the show was worth the trouble, but every year, for old friendship's sake, he dropped into the Redman dealer's office to administer a dose of show stimulant.

"Ready for the opening?" he called out as he hustled into Bennett's office.

"Sure, when I have to do a thing I do it, you know that," Bennett retorted.

"Cheerful grouch," Reilly observed.

"Just the idea," Bennett admitted. "Cornelius, you're always springing bright remarks."

"Cheerful grouch," Reilly mused. "Goes into the show because he has to. Wonders why the folks that work for him don't put more hop into the show job."

"What's my opinion of shows got to do with the way my boys handle the exhibit?" Bennett demanded. "I don't go around telling 'em everything I think about."

"But you can't conceal it," Reilly retorted. "And pessimism is catching."

"Stuff," the Redman dealer retorted.

"Good stuff," Reilly insisted. "There's more than a dog and a talking machine in the picture of 'His Master's Voice.' If you're going into the show get in all over. Let everybody around your place know it's the biggest thing in sight for a whole month before, during and after show week. Then watch the effect on your men—and the results they get at the show."

"What think?" Reilly concluded.

"You're right — sometimes," Bennett conceded.

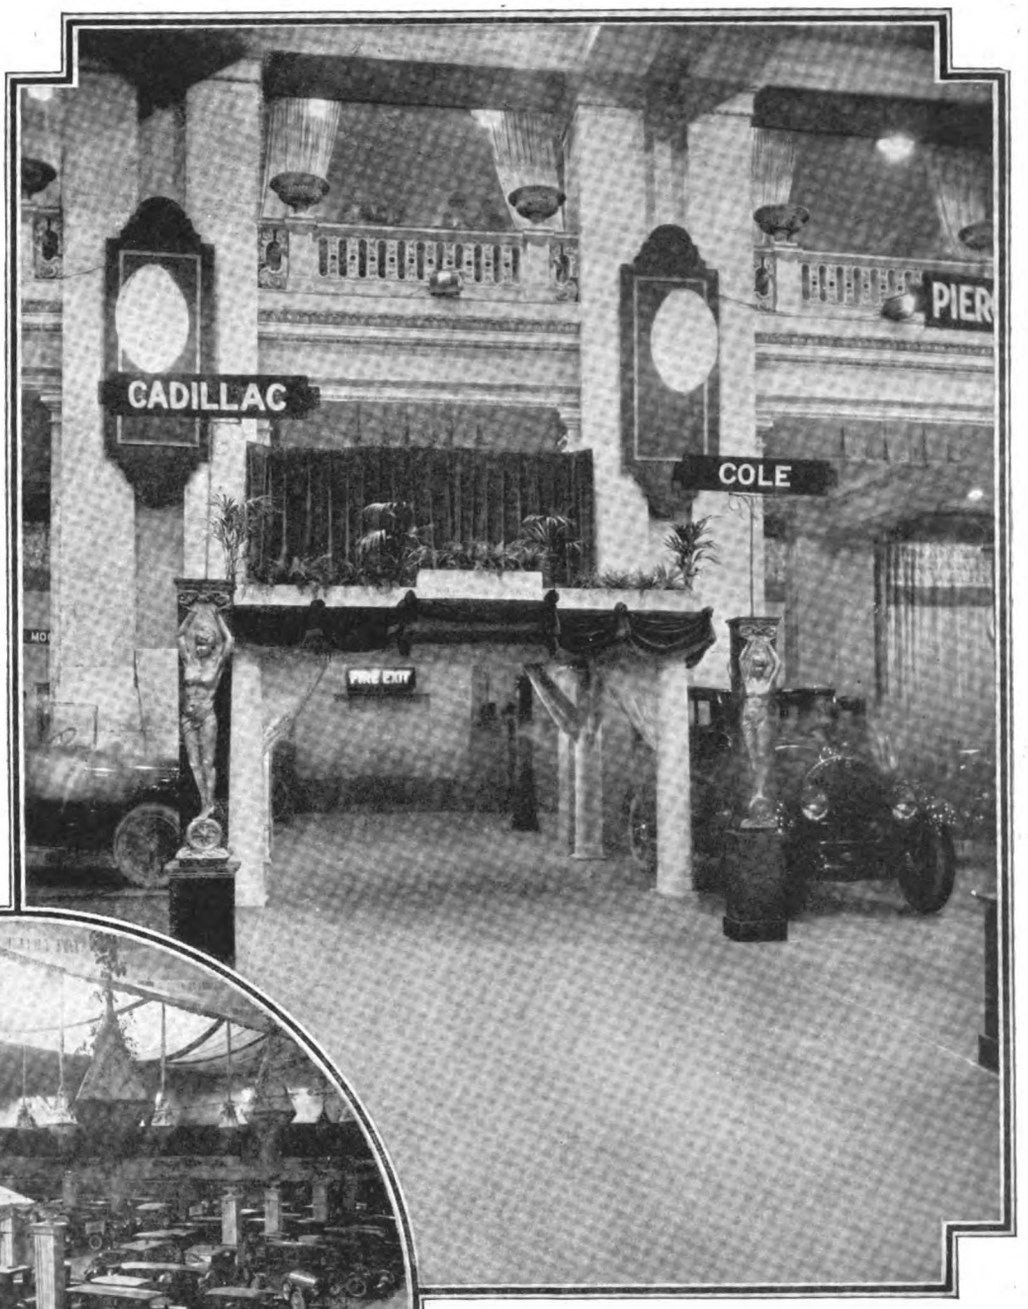
Staging a Show Worthy of the Automobile

AN Avenue de Luxe can be made a striking feature of a show. Boston always has one leading away from the entrance, but it is lined with car exhibits. In the Brooklyn show last year the crowds reached the show floor through a mirror-lined, trellised, vine decorated avenue (shown at the left). The beauty and dignity of the scene made a remarkably effective introduction to the show. Not an inch of exhibit space was sold along this avenue.



THE Brooklyn show last year was so completely dressed that the show crowds forgot they were in an armory. Filmy draperies completely concealed the iron bridgework such as holds up the roof of the average armory and mars the appearance of many a show. The decorations were simple but strikingly effective and the layout of cars avoided crowding and garagelike effects along the aisles.

The finely dressed show on the preceding page is Indianapolis, 1922

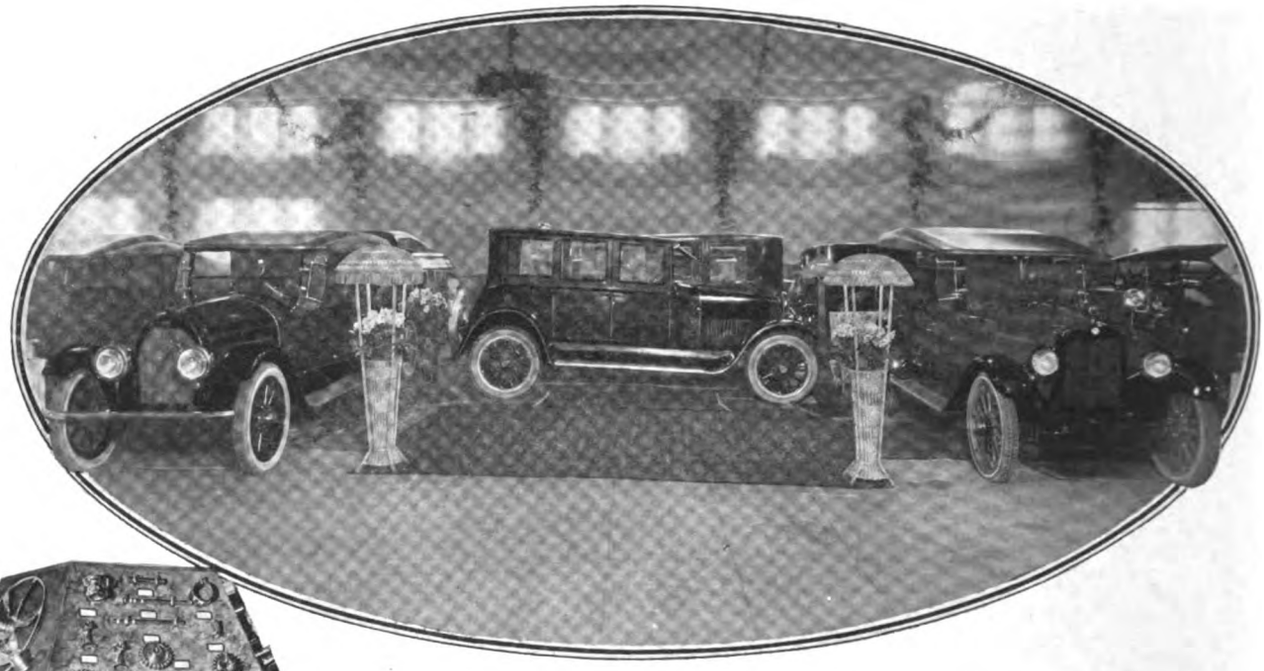
and One That Will Make People Talk

SOMETIMES it helps promote show attendance and interest to have a contest, or several of them, in which the public can take part. If this is done, announcements in the show are effective and a platform is needed to make them from. At the New York closed car show in September the platform at the right served for making announcements. The announcer made his appearance by parting the velvet curtains at the back. Some show committees get the newspapers to chronicle in advance the time and subject of show announcements and create interest and enlarge attendance in this way.



NEWARK, N. J., gave last spring's show a "hub" by setting up a pergola which contained radio apparatus for the official opening of the show by the mayor. Later the pergola was used as a booth by a woman's philanthropic organization. Many shows are built around a fountain, a great vase of flowers or some other feature that provides a striking center

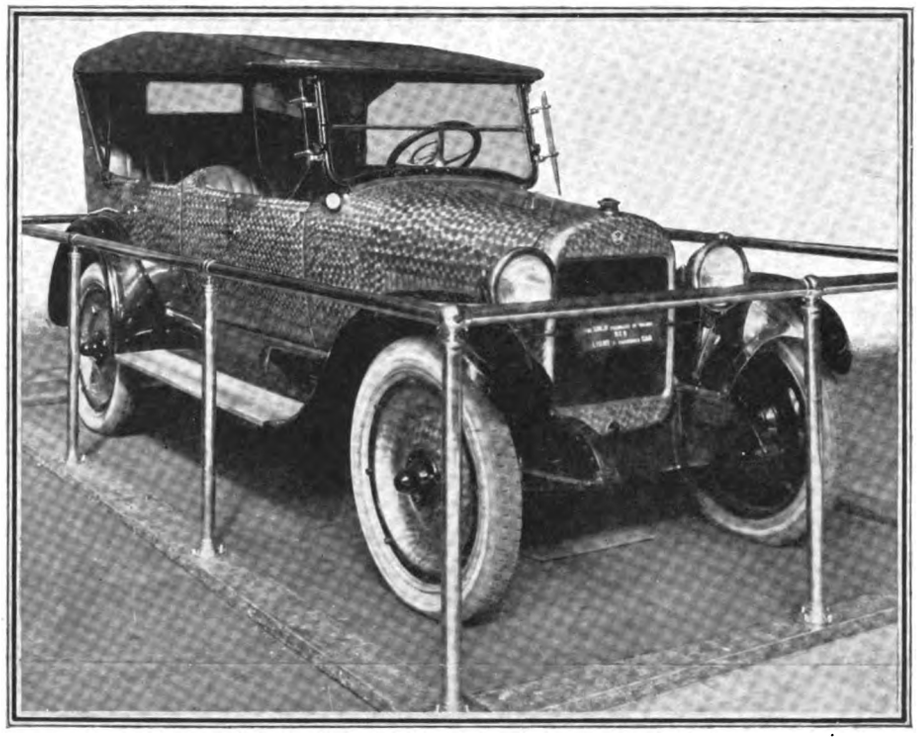
Will Your Exhibit Be a High Spot in the Show?

THE show exhibit can express the invitation, "Step in," in its very arrangement. Note how the placing of the cars, the rug and the flower baskets beckons to the show visitor to stroll in and get better acquainted with the car and the folks who sell it. The accessibility and comfort offered the show visitor in the arrangement of the exhibit has a direct bearing on the exhibit's selling power—a good thing to think about when planning the 1923 show exhibit.

HERE'S an idea for showing small parts in the car exhibit that is both useful and decorative. Since buyers more and more are being educated to an appreciation of mechanical details this display stand often can be of real selling value.



FOLKS always will be interested in "what makes it go." Invariably the crowds linger at the show exhibit that effectively displays an engine. To place the exhibit on the aisle, on a sturdy pedestal, in a way that won't detract from the general appearance of the exhibit, may well claim the careful thought of the exhibitor. Brightly painted castings and highly polished working parts attract attention, and it is always time and effort well spent to give particular attention to these details.

See How These Dealers Made Theirs Stand Out

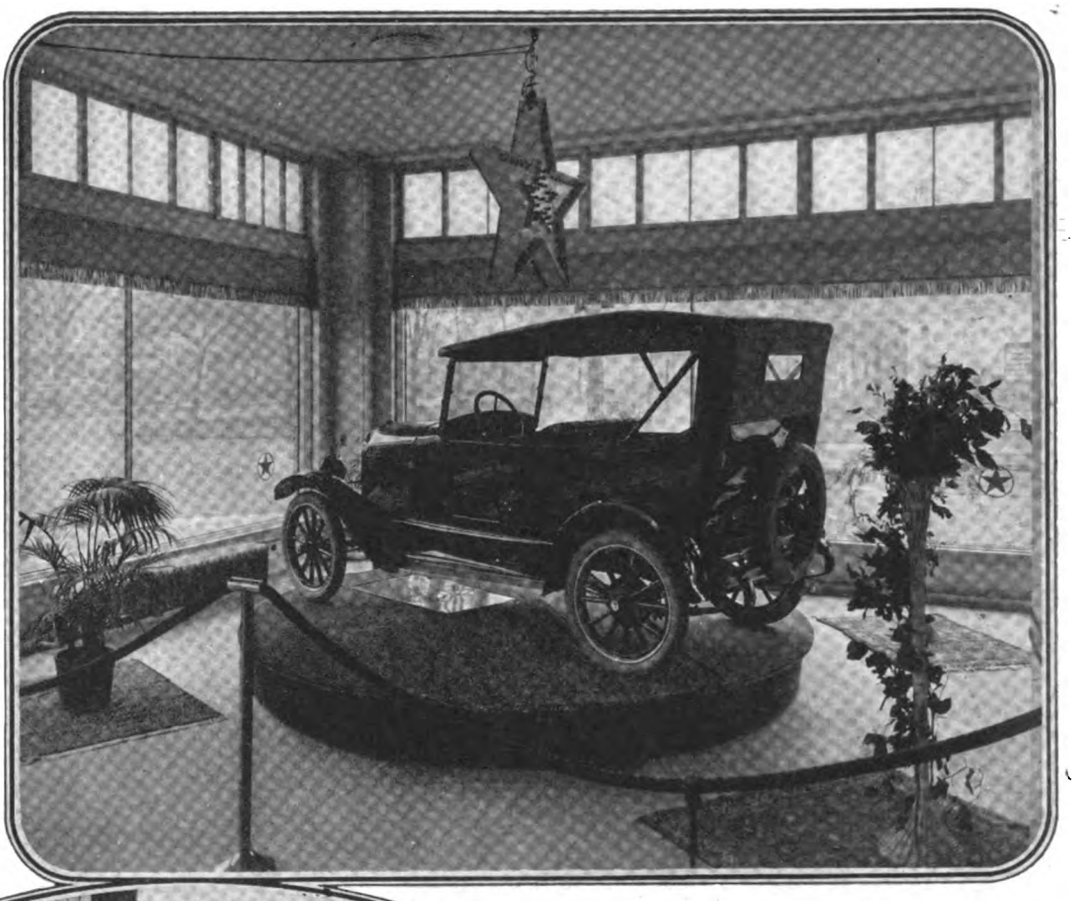
SOMETIMES it pays to go to considerable expense to provide a show exhibit feature that will make a particularly strong appeal to attract attention and cause show "talk." Special show jobs in bright colors—flaming reds and rich yellows—are effective. But, to get an effect really startling some distributors occasionally fix up a car like the one shown at the right. This car was covered with gold leaf and lacquered. After the show in which the distributor used it, the car was sent around to smaller shows in the territory in which his dealers participated. When the expense of making such a show exhibit feature as this is balanced by the opportunity to show it several times during a season it is an advertising medium of much force.

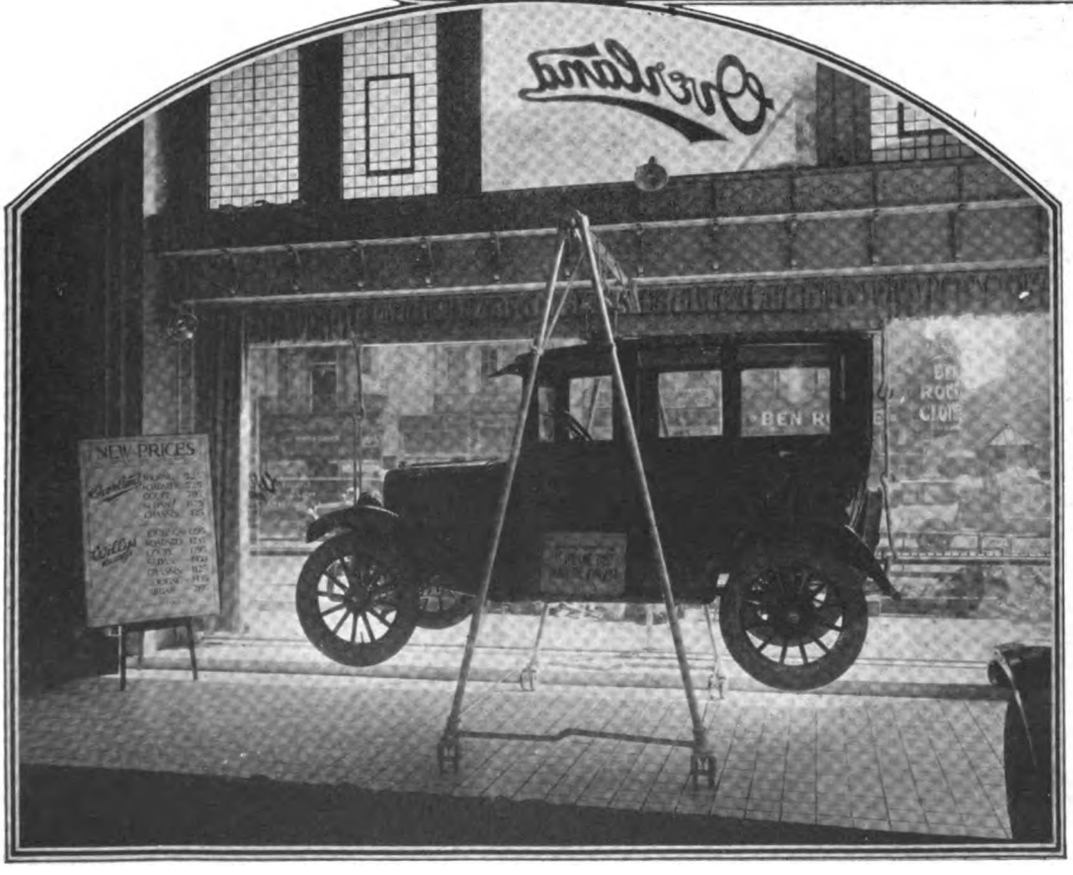
ONCE in a while a dealer can afford to do something distinctly unusual in the presentation of his car at the show. Here is an example of how the Lawfer Auto Co., Allentown, Pa., got intense show interest and publicity with a chassis attended by two uniformed negro boys. How seriously they took their jobs may be observed from the military pose assumed when the photographer said "look pretty." It is safe to assume that they were more natural when handing out catalogs to the show crowd.

Digitized by Google

While the Show Is On Will There Be

THERE are, usually, many visitors in the salesrooms during show week — or there ought to be. One can't take his entire salesroom to the show, but he can take the show to his salesroom with a little investment in decorations and a little more attention to the tasteful arrangement of the cars on the floor. This picture of the R. R. Hall Cadillac Co. salesroom in Denver shows how palms and cut flowers were used to bring a bright, pleasant, and somewhat festive atmosphere to the salesroom.



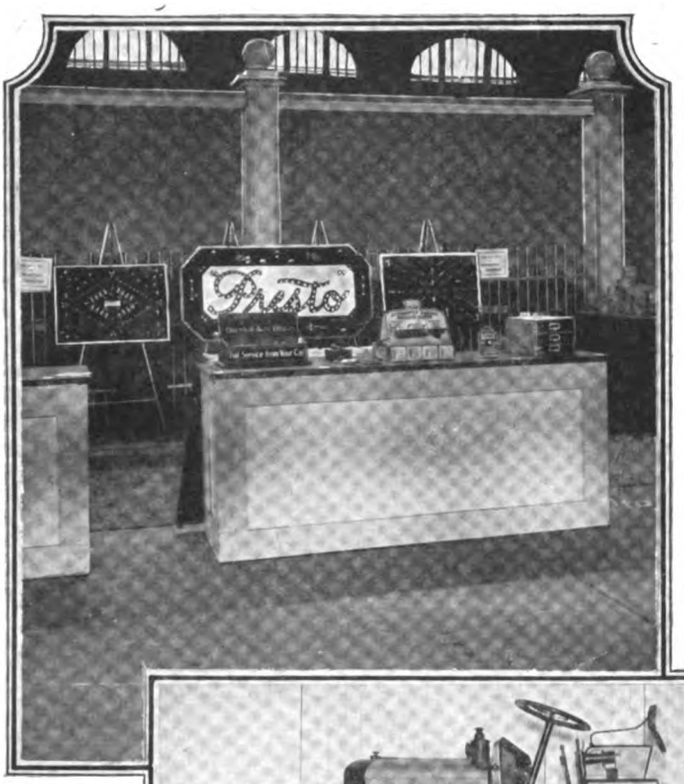


HERE is another example of how show atmosphere may be put into the salesroom at show time. This salesroom of the Studebaker branch at South Bend not only used flowers, and vines but rugs, comfortable chairs, and even a phonograph, to make the salesroom a place where people would wish to linger. It is selling atmosphere that makes people forget their worries and absorb the bright, optimistic outlook upon things that their surroundings inspire. Let's have more show atmosphere in the salesrooms for the 1923 shows.

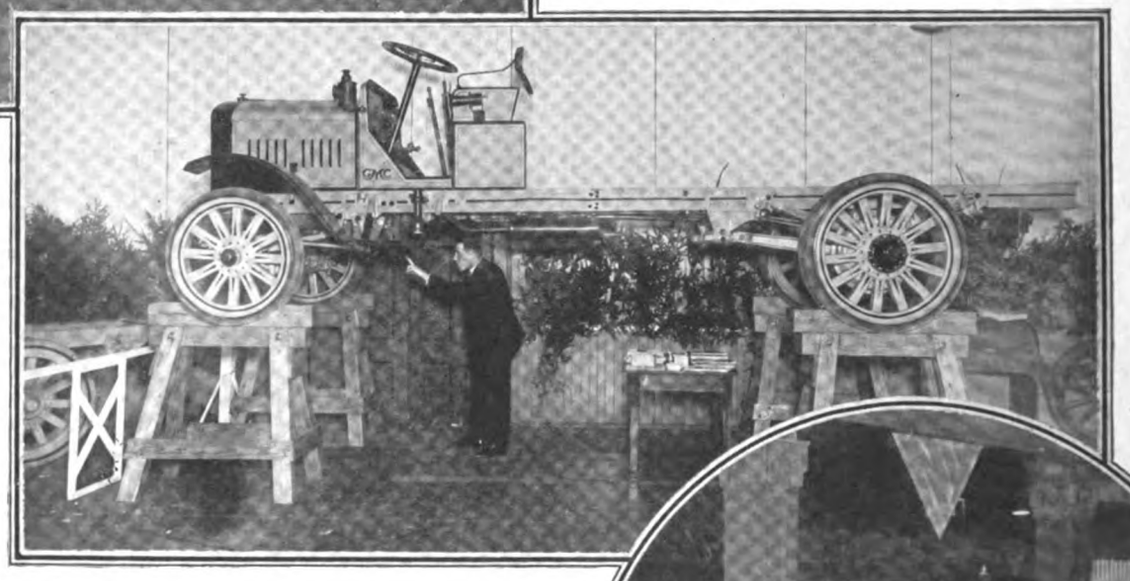
Digitized by Google

Show Atmosphere in Your Salesroom?

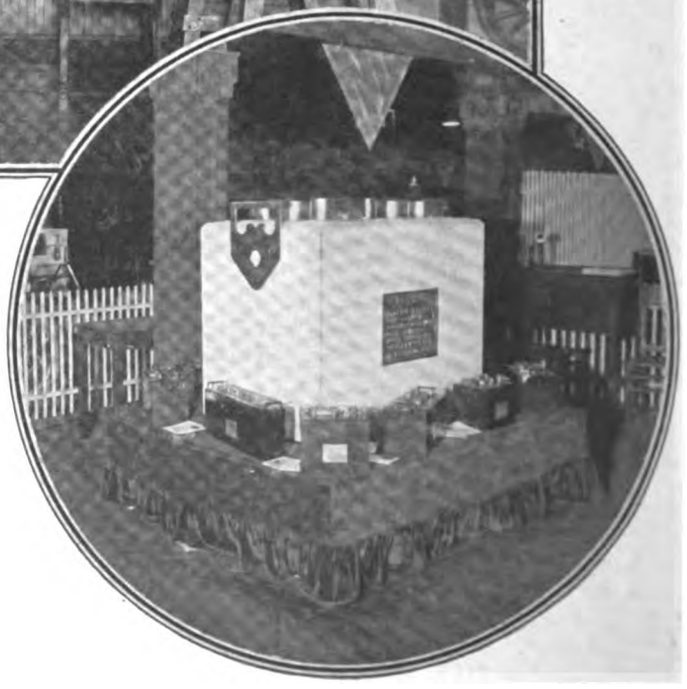
DURING the 1923 shows will be a mighty fine time to do something special in window display. When people see your exhibit at the show and get interested in some of the cars it contains, your salesroom is going to take on additional interest the next time they pass. Perhaps there is a special model that deserves particular treatment, or a selling feature of the car that can be accentuated through a special window display. A display that directs attention to this is particularly good show time advertising. The picture at the right is a Star display made by the Durant, Star and Locomobile establishment in Detroit. A small motor made the platform revolve.



IN this display the idea that was impressed on the public was that "the perfectly balanced car is the one that wears the longest." To visualize the idea in the Willys - Overland salesroom in New York the car was hung in a yoke from a stand in the window and a sign on the running board carried the message. Another good feature that might be demonstrated with most modern cars would be the safety of the low built car. This might be done by displaying a car tilted sideways on a platform inclined at an angle of about 30 degrees. A sign might point out the safety factor in its low center of gravity.



Digitized by Google



When You Plan the Truck or Equipment Exhibit

WITH space usually at a premium in the automotive equipment sections of automobile shows much thought must be given to an arrangement that will be pleasing to the eye and at the same time will carry the selling message effectively to the people in the aisles. This arrangement, in which an electric sign carried the trade name and plush covered display boards showed the products, is as effective as it is popular. A neat counter aids selling by providing a place to display items within the reach of show visitors. Working models, driven by a small motor, are particularly effective in this type of display.

GOOD ideas for displaying trucks at shows are usually at a premium. People don't stand off and admire the lines, or come closer to examine the upholstery of trucks. The truck prospect is primarily interested in the performance he is going to get, and next what the truck has to prove to him that it can deliver satisfaction in a mechanical way. In the picture shown below the truck was mounted on a set of horses that raised it far enough from the floor to allow a prospect to walk under it and inspect it minutely.

IT usually is quite a problem to make a battery show exhibit "sparkle." There's nothing very striking about a lot of black boxes. However, here is a battery exhibit idea that can be prepared with very little expense and labor. The box may be built in the shop of any battery service station from light lumber. A few coats of white paint and enamel will fill up the grain and give it a heavy appearance. The terminals and connectors may be made of tin and painted with metallic paint. Dimensions may vary according to the size and position of the display in the exhibit. One that is four or five feet long with other dimensions in proportion, according to the make of battery to be exhibited, will do for the ordinary battery exhibit. If this box is placed on a red plush covered platform and some batteries grouped around it a very striking display will result.

The 1923 Shows

Will Bring Many Selling Opportunities—Some Will Seize 'Em, Some Will Lose 'Em— What Will You Do?

FOLKS advertise their losses, sometimes. But did you ever read one like this?

LOST—In the automobile show, one golden opportunity for more sales and profits through failure to take advantage of it when that opportunity presented itself.

Certainly not. And yet, how many of us might have advertised our losses in this way last year and the years before?

And, what is still more important, how many of us are going to continue to lose the golden opportunity of the 1923 shows?

Motor World hopes the number will be small indeed. And, to help make that number small, it is presenting, in the following pages, some *practical, workable suggestions for taking advantage of the selling opportunity, the golden opportunity, of the shows.*

Every one of the show merchandising ideas presented — those for the show committee, those for the dealer and those for the salesman — has been thoroughly tested in the laboratory of practical application. They are ideas and suggestions that have helped others, in past shows, to make the most of the show opportunity.

For most of them Leon F. Banigan, of the Motor World editorial staff, author of the twelve pages following, acknowledges the cooperation of several of the industry's successful show managers, dealers and salesmen.

While these numerous show selling ideas logically group themselves under the headings used, there is much of interest in each of these articles for every person in the automotive industry who is interested in the merchandising of its products. They contain ideas that, with a little adaptation, may be made to fit in well with the 1923 plans of show committees, dealers and salesmen.

If these stories help you to visualize your opportunities more clearly and contain a few thoughts that are helpful in rounding out your 1923 show plans these stories will have accomplished their purpose.

You will want to read these stories—every word of every one of them. You will want to combine some of the ideas they contain with the ideas that you have found successful. You will want to seize the selling opportunity of the 1923 shows and wrest from it every atom of success it holds for you.

You will want to clearly visualize, now, before the plans for your 1923 show efforts are completed, the full opportunities that these shows hold forth. You will want to know how you can best prepare the public for a favorable reception of your show, your exhibit and your cars. You will want to know how to guide the activities of salesmen in the show so as to lose none of the opportunities for making friends and prospects during the show, and you will want to know how to effectively plan and carry out a program of following up show prospects. These stories will help you visualize the opportunities and will bring to you some suggestions for making the most of these opportunities.

You will want to begin doing things NOW.

And what you want a whole lot—and plan for a whole lot—YOU WILL GET.

How to Make the Most of the 1923 Show Opportunity

Practical Ideas for the Show Committee on Planning, Promoting and Staging a Real Selling Event

THE automotive industry is entering once more the great exposition period—a period rich in opportunity for co-operative merchandising effort in presenting the 1923 motor car to the public. How effectively the 1923 automobile will be introduced, how strongly it will appeal and how well it will sell through the year will depend to some extent on the 1923 automobile shows.

In view of this fact, the automobile show season imposes a sacred duty on the groups of men in the various cities of the country into whose hands is given the planning, promoting and staging of the 1923 shows. It imposes upon the show committees the duty of insuring the very best presentation of the motor car that it is within their power to give. This can be accomplished if the work of the show committee results in *a pleasing show and a large, interested show attendance. The show must be thoughtfully planned, effectively promoted and carefully staged.*

IN the planning of the 1923 automobile show in any town it is a good thought for the show committee to bear in mind that the primary object of automobile shows is to promote the sale of automobiles—not to make money for a dealers' association. This does not mean that the show cannot be a profitable venture—most successful shows are—but it does mean that, no matter how much money the show makes, it has failed if it has not presented the 1923 automobile in a strong merchandising way.

Many an automobile show has lost its selling value because of unbalanced planning, promoting and staging. A wonderful exposition is of little value if the show promotion fails to fill the aisles with people—interested people who are prospective car purchasers. On the other hand, aisles jammed with spectators, disappointed and disgusted at a small, unrepresentative, unimpressive, poorly managed exposition, may bring turnstile receipts, but does not help sell motor cars—in fact, it may be an actual factor of sales resistance later. There have been many of both kinds of shows.

Plan 1923 Shows Now

The 1923 shows will be good shows if the planning that should be under way now is done with the thought of making the very best presentation of the 1923 motor cars that is possible and then insuring, through adequate and effective promotion, the very largest and best attendance possible.

The basis of a well-balanced automobile show is a good show budget. Without well-proportioned and well-invested appropriations there is danger of the show plans growing strong in one department and weak in others. The lessons learned from previous shows will be the guiding forces in determining how much shall be invested in decorations, promotions, supervision, etc., to insure a well-balanced effort. It is a foresighted show committee that provides a contingent fund of 5 to 10 per cent of the total show budget for the extras that are almost certain to creep in as the show plans develop.

Use Some Street Standards

WOODEN columns like the one shown above attract lots of attention and may be used to advantage, especially if used in connection with a "court of honor" at the entrance of the show. Most cities give permission for the erection of a few of these in the business section and in the vicinity of the show building during show and a few days previous to the opening of the show

The organization of the show committee and the delegation of duties to individual members or sub-committees is an important factor in the success of show committee work, and one to which considerable thought may be profitably given.

The Show Committee

After several years' experiments in the organization and working plans of show committees, some dealer associations have greatly facilitated the handling of shows by making the board of directors of the association the active show committee. In the first place, the board of directors usually consists of a very good choice of the association's membership. Then, too, under most association by-laws, the board of directors controls expenditures, and it facilitates and expedites the work to have the power of paying bills in the hands of the committee that is spending the money.

Much thought has been given by show committees recently to interpreting the message the show is designed to carry to the public and providing a means of insuring the acceptance of this interpretation by the public. One of the most effective means of doing this was used in the Chicago show a year ago and adopted by many smaller shows that followed. This was the standardized show story. It was presented to the dealers and their salesmen at a meeting before the show and supplanted the personal ideas and con-

Digitized by Google

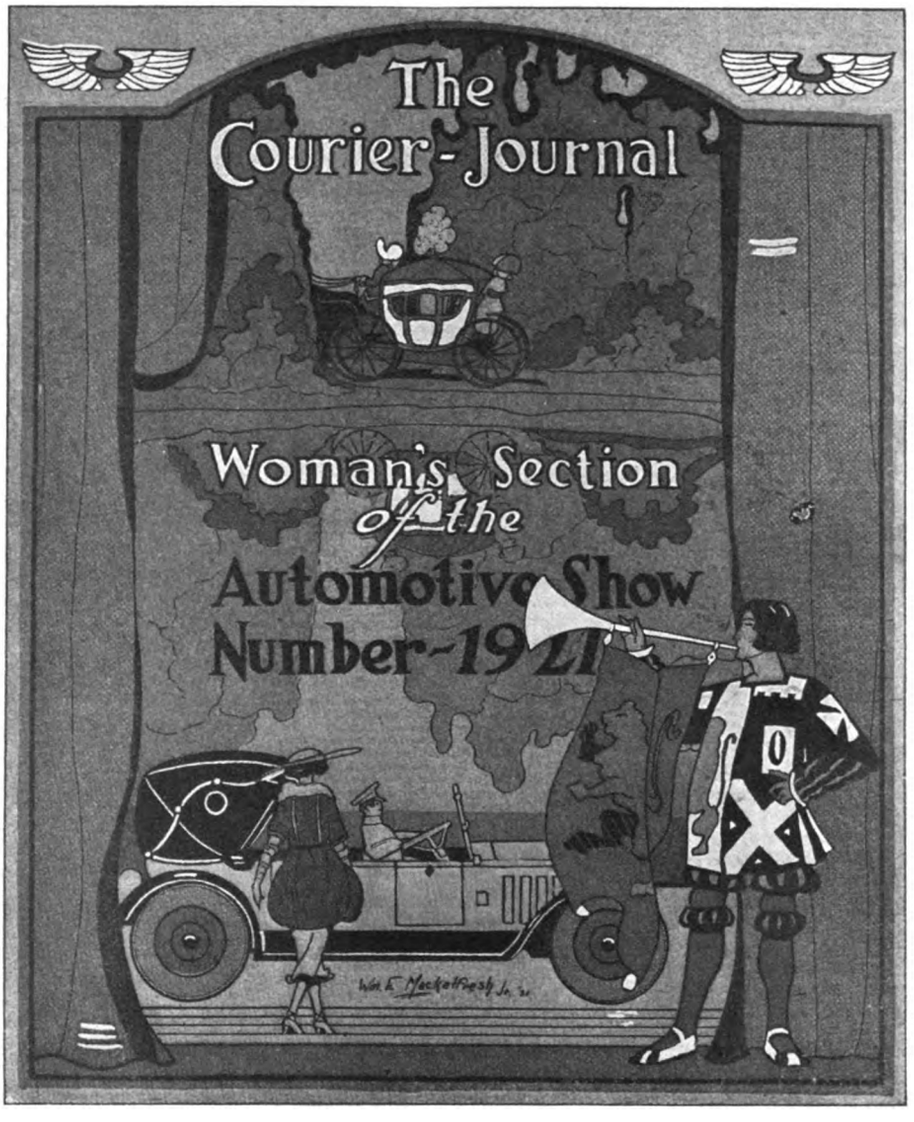
clusions of individuals with a broad, clear, concise and truthful presentation of that information which the show visitor seeks concerning business conditions, prices, used-car values, etc.

The 1923 shows have a definite story to tell. The story as revealed farther along in this number of Motor World in the articles on "Selling the 1923 Car" is the story of useful, dependable, economical motor cars.

Instead of asking the public to attend the "20th Annual Automobile Exposition," which is just another way of saying, "Come and see *another* motor car show," why not invite the public to see the products of the automobile industry which the industry presents as useful, dependable, economical vehicles.

The Big Job at the Shows

It is the job of the show committees to SELL THE 1923 SHOWS FIRST TO THE DEALERS AND THEN TO THE PUBLIC. But the show is not sold to the dealer when he has sent in his check for space, nor is it sold to the public when the visitor pays at the turnstile. The show is sold to the exhibitor only when he has a true conception of what the show will do for him, of the selling opportunity that it presents. And the show is sold to the spectators only when it has carried home to them the true story of the products it exhibits.



There is plenty of real constructive work for the 1923 show committees, more than selecting a building and decorating it and filling it with motor cars and people. The biggest job of all is selling the 1923 motor car—that's the reason for the shows—sometimes it is overlooked.

Selling space in the show and in the show program are activities that should begin early. In most cities where shows are an annual event the inadequacy of exposition room makes "selling the floor" a matter of signing up previous exhibitors. Selling advertising space in the show program is usually most satisfactorily handled by farming out the job to someone in town who specializes and is particularly successful in this work. Sometimes a hard-working program committee can be depended upon to get the advertising.

An activity that can very profitably precede the actual canvassing of local merchants for show program advertising is the SELLING of the show to the businesses of the town. This is usually most effectively accomplished through the local Chamber of Commerce, and it may be profitably followed up by calling on a large number of merchants and SELLING them on the opportunities for them to get into the show picture and cash in on the large rural attendance that many shows attract. In some cities local merchants get into the show picture and at the same time help advertise the show by carrying a paragraph referring to the coming show in their newspaper advertising, circularizing rural communities on the subject of visiting the store while in town for the automobile show, displaying automotive merchandise, motoring clothes, etc., in display windows.

Establishment of a publicity bureau is something that should be done early in show planning. The most satisfactory plan usually is to engage a practical newspaper man or advertising agency and hold that one man or organization responsible for getting the needed publicity. These persons know how to get newspaper publicity, how to prepare the copy that is acceptable to the newspapers. There is much of real news interest in the development of the plans for an automobile show, but it takes an experienced newspaper man to grasp the news value of pre-show events and capitalize them. Some of the effective forms of promotion used by show publicity bureaus will be described further on

Ask the Newspapers to Print Special Automobile Show Editions

MOST live newspapers capitalize the opportunities of automobile shows by getting out special show editions. Show committees can encourage this by getting the co-operation of the automotive advertisers for the papers. With this advertising as a nucleus the newspaper can often sell a large volume of general advertising for the section which not only pays for the setting of the editorial matter, but returns a good profit to the paper. The publicity bureau of the show should help in every way possible to get out these special editions by supplying material of all kinds, national and local. The above picture shows a colored front page of the woman's section of one paper two years ago

Digitized by Google

in this story. Perhaps they contain a new idea or two for some show committees.

Another event that may profitably be planned with much thought is the pre-show dinner of the dealers and salesmen, at which final information and suggestions concerning the conduct of the show, its mission, its opportunities for co-operative effort and individual benefit for exhibitors, may be imparted.

Promoting the Shows

Next to planning, promotion is the most important factor in making the 1923 shows successful. Automobile show promotion must be strikingly interesting, yet of a dignity compatible with the great, dependable, useful commodity to be exhibited. Well-balanced show promotion makes an appeal to all interests in the show town. It begins with the selling of the show to those who are to exhibit in it, extends to the other business men in the town and closes in a strong appeal to the public. Its forms are as varied as the individual shows are in character and appearance and promotion work in various communities must be controlled by the community tastes and the promises of success for various "stunts."

Following are some show-promotion ideas that have been particularly successful in various cities and towns.

1—*Encourage newspapers to issue show editions.* The benefits of such an activity are not confined to the publicity that the show gets when the special edition is printed. The missionary work that is done by the newspaper's advertising solicitors in this special effort to sell more advertising in the special issue—advertising with an automotive appeal—is valuable in selling the show to the local business men.

2—*Have special show stationery prepared.* Most show committees have found special stationery of considerable value in a promotional way. One form of show stationery that is favorably regarded is the printing of a calendar on envelopes, letter heads, blotters that are used as envelope stuffers, etc., which substitutes the letters A-U-T-O S-H-O-W for the dates of the month on which the show is held.

3—*Have a "Court of Honor" at the entrance of the show.* This is accomplished by erecting upright columns at the entrance of the show with arches suspended across the street, painted white and decorated with laurel and flags with conspicuous signs advertising the automobile show. In addition to this, standards or flags or banners suspended from trolley wires, poles, etc., for a few blocks lead to the show building. When the show building is in the motor row section this effect may be obtained with arrows carrying show advertising, pasted on the automotive dealers' windows.

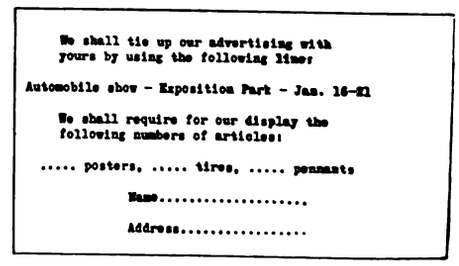
4—*Circularization of owners and prospects.* Most show committees find it profitable to send a piece of mail promotion to every registered car and truck owner in the territory and to supply dealers with material to be mailed to prospects among non-owners. With this story is shown how Brooklyn, last year, used a mail effort of this description and strengthened it by the use of window stickers, newspaper and program advertising and cards tied up by a general idea of arrangement.

5—*Supply newspapers through publicity bureau with statements of the Governor, Mayor and other prominent persons* in which reference to the motor car's place in modern civilization is extolled.

7—*Ask all automotive dealers to carry an announcement in their advertisements* for a few weeks before the show opens, calling attention to it and their participation in the show.

8—*Request restaurants and hotels to carry the show announcement on menus.*

9—*Supply pennants for hotels, stores, restaurants* and other places where the public gathers advertising the show.



10—*Supply cloth pennants* for use on demonstration cars, service cars and other vehicles used by dealers, and by truck drivers of the vicinity.

Tying Up Show Publicity and Advertising

SHOW publicity and advertising will be stronger if all is tied together with some feature that dominates its general appearance. The Brooklyn show did this in an effective way last year. The central idea in the Brooklyn material was a cut-out of an automboile which carried an announcement of the show. These cut-outs were mailed to every registered automobile and truck owner in the territory. The same design and color was used in window pasters with which the dealers decorated display windows, those in the vicinity of the show building pasting them on the window in the form of arrows pointing to the building. The design also was used in all newspaper, theater program and other advertising used by the show committee

Getting the Merchants' Co-operation

We shall tie up our advertising with yours by using the following line:

Automobile show - Exposition Park - Jan. 16-21

We shall require for our display the following numbers of articles:

..... posters, ... tires, ... pennants

Name.....

Address.....

ROCHESTER gets the cooperation of the businesses in its city by furnishing them with posters, tires painted and carrying show advertising, pennants, etc. Here is a return postcard used by the Rochester Automobile Dealers Association in enlisting advertising co-operation among the city's business men

Digitized by Google

Hold a "Motor Car Girl" Contest

HERE is a show promotion idea that will make a strong popular appeal, provide the newspapers with interesting material, get the co-operation of local merchants and help swell show attendance.

It is an Automobile Show Girl Contest.

The procedure in staging such a show follows:

1—Through a contest among local artists or by arrangement with one select a picture of a pretty girl.

2—Call her Miss Cleveland or Miss Richmond, according to the name of your city, or The 1923 Motor Car Girl, The Automobile Show Girl, or some similar name.

3—Publish the picture in the newspapers and announce a prize of a Ford coupe, or some other small car to the girl in your town who most closely resembles the original.

4—Appoint a committee of competent judges to make the selection from among the contestants who enter by filing their photographs with the committee.

5—Set a night shortly before the show at which the committee meets all the contestants and makes its selection.

6—Set a special show night or nights at which the winner is guest of the show, and on which the formal presentation of the prize is made.

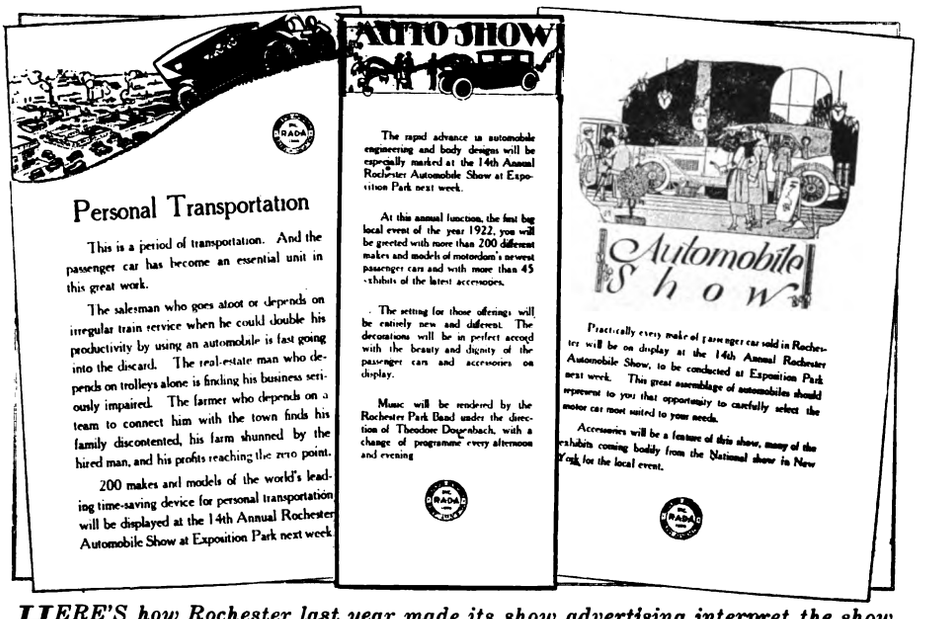
Such a promotion feature, if well handled by the publicity bureau, can be made to develop strong public interest and a lot of newspaper publicity. It has a human interest appeal that appeals to everyone and intense interest in the contest is bound to develop. Where this feature has been used other merchants often get into the picture, and help incidentally to boost the automobile show by announcing in their advertising and in the papers that they will supply the gown, shoes, hat, hair dressing, manicure, etc., etc., for the prize winner when she appears at the show.

The actual staging of an automobile show is a job of many related details, supervision over which is usually best handled when vested in one man, or one small committee. Division of authority is usually unsatisfactory. In larger cities the show committee may wish to engage a show manager, but in most associations the work is done by the paid association secretary.

Definite regulations for the conduct of the exposition, covering restrictions on activities in the booths, time of placing exhibits, changing exhibits, etc., must be enforced if everyone is to be treated fairly, and they should be plainly established before the doors are opened.

An adequate force of porters under the supervision of one man charged with the responsibility of keeping the show, anterooms, etc., clean and pleasing is always a worthwhile investment. Uniformed ticket takers add much to the dignity and appearance of shows.

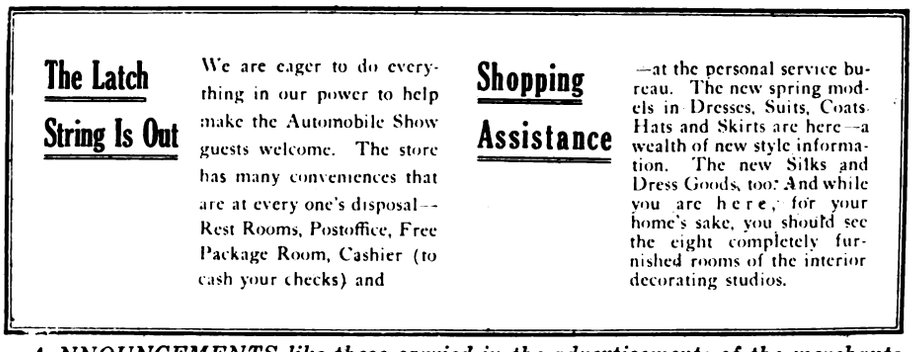
Considerable thought has been given recently to special show activities such as special nights, fashion shows, educational films, etc., as a means of attracting show patronage and supplying interesting and informative entertainment for show attendances.



The special night feature is well known and needs little explanation here. The general procedure is to name certain nights for civic bodies and fraternal associations, issuing special invitations to the members to attend on special nights. The fashion show idea is gaining considerable popularity. These shows are generally given in the afternoon to attract women. Models, showing seasonal gowns, wraps and some motoring clothes, pass through the aisles at stated intervals.

Special Exhibits

Another interesting show feature that will be staged in many shows this year where there is space is the historical exhibit, showing early models of motor cars. This is a feature that always attracts and when well promoted may be made a good attendance builder.



The automobile shows of 1923 will be good shows if the committees in charge of them keep foremost in the planning, promoting and staging of them the thought that the big job of the show is to SELL to the public the 1923 motor car.

Make the Show Advertising Interpret the 1923 Shows

HERE'S how Rochester last year made its show advertising interpret the show. These advertisements, used in all newspapers in the territory, did more than ask people to come to a show. They SOLD desirable features of the industry's latest products, and asked people to inspect them at the show

How Some Merchants Co-operate in Boosting the Show

ANNOUNCEMENTS like these carried in the advertisements of the merchants of the city help advertise the automobile show and at the same time allow the merchant to make a tie-up with advertising that will be beneficial to his business. Most merchants will be glad of the opportunity of doing somthing like this if it is suggested

How to Profitably Employ the Selling Opportunities of the 1923 Shows

Some Timely Ideas for Dealers on Show Advertising, Directing Salesmen and Follow-Up

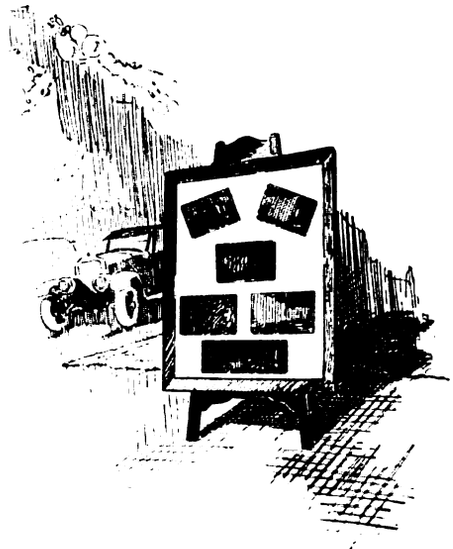
ONCE each year Opportunity, in the guise of an automobile show, visits most dealers. Opportunity rewards those who are prepared to receive the favors she is anxious to bestow. But she sheds no tears for those who are indifferent to the benefits she extends. Her departure leaves those who were prepared rewarded, rejuvenated and encouraged toward greater things. Why mourn for those who snub her?

The 1923 shows, which will begin with New York and Chicago in January and spread across the country in the next three months, embracing nearly every city and town, will again present opportunity.

The Selling Opportunity

This is the time when every automotive dealer might ask himself: "How can I get the most out of the 1923 show in my town?" It is a most pertinent question because upon what the dealer does between now and the day his automobile show opens—how he prepares to reap the harvest of the show's opportunity during the show and after the lights go out—will depend the success of the show for him, in a selling sense.

And right here—now—let's banish the mistaken belief that automobile shows sell automobiles. They don't and never were meant to, although some of us continue to be disappointed because they don't. Automobile shows provide selling opportunities. They direct the limelight of publicity toward the dealer and his car. They provide the atmosphere in which the automobile is displayed in a way that is pleasing. They put some dealers in direct contact with many persons who want to own automobiles and who may be sold automobiles. *The shows present the opportunity to sell. But selling is and always has been the job of the dealer and his salesmen.*



Let's not be led astray this year by the thought that when we put a few cars and palms and salesmen into a square in the automobile show we have done all that is necessary—that the show will do the rest. It won't.

The show is merely a stage. How well the dealer's "act" takes with the public depends upon how thoroughly he has "rehearsed" and perfected himself in making his appeal for public approval. His opportunity to make good must be grasped while he is in the limelight. If he grasps it there will be encores in the form of after-show sales. The public will remember the exhibits that impressed them in the show. They'll forget the others. An actor might as soon expect success without study and preparation before stepping onto the stage as a dealer who enters the show without studying, training, rehearsing and perfecting his "company" before the curtain rises.

Nor is the selling opportunity of the show confined to the week or so in which the show is held. This is but the peak of the opportunity. It begins several weeks before the doors open, when the dealer must be busy organizing for the show, perfecting his organization to make the most of the show opportunity, directing the attention of prospects to the show in the hope of closing them during or just after it, and doing the many other things that are necessary to properly prepare for the show. It continues at white heat during the show, when the dealer should bring to bear his strongest selling forces, and it continues after the doors are closed in the form of intensive and intelligent follow-up.

It is with the things that the dealer should do before the show, during the show and after the show that this story is particularly concerned.

Bringing the Establishment Into the Show

NOT only your cars, but your facilities to help them give satisfaction, are what show visitors are interested in. Where shows permit it, some dealers have found it a good plan to show pictures of their salesroom, parts department, service station, etc., on a special display board in the rear of the exhibit.

Getting Show Results

It is the purpose of this story to help dealers get out of the 1923 shows the very best returns obtainable. It is to deal particularly with how the dealer can:

1—*Prepare for the show*—get into the show picture.

2—*Direct Sales Staffs*—grasp the show week opportunity.

3—*Handle Prospects and Follow-ups*—cash in on the opportunity.

Having established clearly the idea that participation in the 1923 shows means work; that it means weeks of preparation, organization and planning; and it means the co-ordination of all the dealer's selling forces in a grand effort during show week, and prompt, alert, purposeful following up of every selling opportunity developed by the show, let's consider some of the real practical suggestions that come to us from the show successes of dealers in the past.

In the first place the dealer who has decided to enter the show wishes all of his friends and prospects, and all who are or may be possible buyers of his car, to KNOW that he is in the show. He wants to meet them at his booth when the big week arrives, to show them the very latest products of his factory and to tell them about his line. *He wants to get into the show picture.* He wants to impress on the minds of everyone that they should go to the

Digitized by Google

automobile show and especially they should see his exhibit.

The forces that are his to use for this purpose are principally advertising and display. He will recognize the fact that while the show attracts many people who may become prospects for his car it will also attract many of his prospects who may be impressed by other cars at the show. He will wish to impress on the latter that they will be afforded a particularly fine opportunity to observe his cars under the same favorable conditions that they do the others in the show, and to register with them as a part of their show that HIS car will be there and HE will be there to tell them all about it.

The Before Show Effort

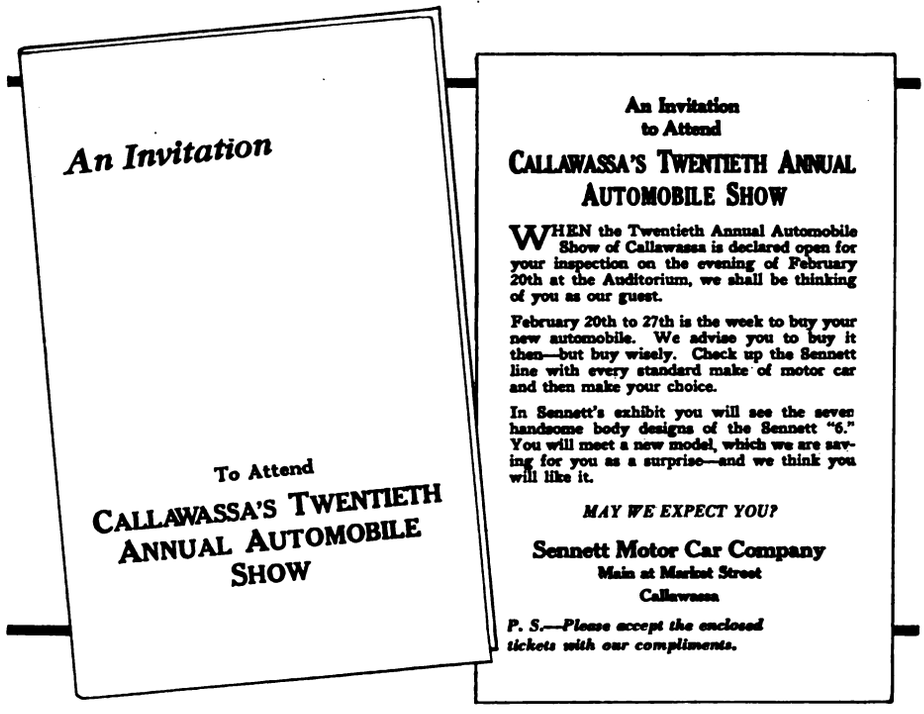
Some dealers begin as much as a month before the show opens to bombard their prospects—their entire mailing list—with letters and literature concerning their car, and accompany all of it with the announcement that the place to see the line and to learn all about it is at the show. Sometimes this effort has been very effectively carried out through a letter campaign of the "teaser" type. Sometimes it is done in a more general way through a "teaser" advertising campaign. One campaign that was particularly successful consisted of five or six mailings and newspaper ads which led the public from the bare announcement of the catalogued show space number without explanation to a complete announcement of the models to be exhibited. The last piece in the mail campaign was accompanied by an engraved invitation to visit the dealer's booth in the show, with two admission tickets.

Some of the means of getting into the show picture, before the show, which have been used by dealers in past shows are:

1—*Use of old models in street demonstrations for publicity purposes.* One dealer made a publicity stunt of this kind particularly effective and gave it a strong human interest appeal by arranging with the city health officer to give the car a "physical examination" in front of the City Hall at a certain time. The newspapers were primed for the event and on the appointed day the old car was driven to the curb in front of the municipal building. The health officer, after applying a stethoscope, reported the car "active and strong and good for many more years."

2—*Special show announcement stickers.* These stickers, printed in small, neat type and gummed along one edge, are supplied to all departments by the dealer. They are attached to every piece of mail matter that goes out, including statements, bills, regular mailing material, etc.

3—*Window cards.* Most show committees supply dealers with cards for display in the salesroom windows. Where these are not supplied it is helpful to have one or two neat cards lettered and to make them a part of the window displays for two or three weeks before the show. These cards may contain a short message inviting everyone to visit the dealer's exhibit in the coming show.



4—*Display in hotel lobby.* Placing one car in the lobby of a hotel a week or more before the show with a card attached announcing that the entire line will be displayed during the show in a dealer's booth has been very effective publicity in some larger cities. An entirely new model shown in a hotel lobby as well as in the show during show week is sometimes effectively used. Some dealers display a car in a department store before the show, as well as during the show.

One of the most important pre-show activities of the dealer is the organization and training of the entire organization to make the most of the show opportunity. This should include every person connected with the business and particularly those who will be brought into personal contact with prospects during the show. The telephone operator is an important cog in the selling machine always, and particularly at show time. Is she going to be particularly cheerful and courteous and efficient in handling the heavier phone calls that show week develops? Is the service department and its personnel going to be particular about appearance during the week when many strangers will visit it for the first time? Is the salesroom going to look its best and breath the atmosphere of the show in its arrangement and decorations during show week? Is every department going to be on its toes every minute to insure good first impressions for the many new friends the salesmen are going to make in the show, some of whom, at least, they are going to bring around to the salesroom and the service station?

The Salesman's Job

And the salesmen—there's much to be done by them in preparation for the big selling opportunity. Are they all thoroughly conversant with the selling points of the car and with its mechanical features? Do they know just how the dealer expects them to receive prospects in the booth, and what he expects them to say concerning the car? The day is past when

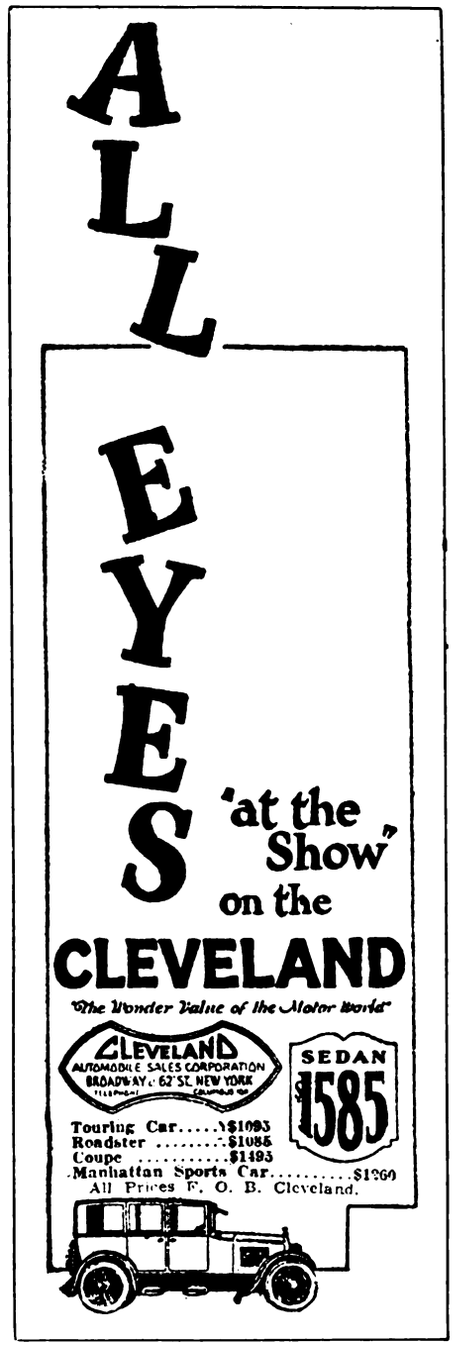
Letting Folks Know You're in the Show

AMONG the before show advertising activities that bring good results is the show invitation. This is generally designed and printed up a month or more before the show opens and mailed about a week before the show to prospects and friends. The invitation above suggests the form and in a general way the kind of a message that may be expected to interest people in the dealer's exhibit. Combined with show advertising and other publicity features it makes a strong before show campaign

Digitized by Google

dealers can afford to put men into show booths who are not thoroughly familiar with the product they are to sell and who are not really capable of representing the dealer in their contact with show visitors. The 1923 show visitor will be a pretty well informed person regarding automobiles. He will expect courteous treatment and intelligent answers. AND WITH SO MANY GOOD CARS BIDDING FOR HIS FAVOR HE'S NOT GOING TO WORRY MUCH ABOUT THE PRODUCT OF THE FELLOW WHO ISN'T PREPARED TO SERVE HIM.

Many dealers insure the best possible show service to the public by issuing written instructions to salesmen and other employees concerned regarding policies, etc., and by instructing the show organization at several meetings before the show. Several pre-show meetings at which the mechanical and body details of new models are explained and fully discussed are a necessity in every dealer organization.



Arranging the Exhibit

Another pre-show thought is the arrangement of the show display. Some study before the show will result in better arrangement. Some dealers find it profitable to chalk off on the salesroom or service station floor a space exactly the size and shape of the one to be occupied in the show and then experiment with the arrangement of cars, tables, etc., in this space to get the best effect. Dealers are not crowding show booths as much as they used to. In most good show displays the amount of space actually occupied by cars is seldom more than 40 per cent of the entire area of the booth.

Another detail that the dealer will wish to consider in connection with his show exhibit is the color he puts into it. One bright sport model works wonders in brightening up a show exhibit, and the whole exhibit is much more pleasing if there is harmony in the colors selected. Arrangements for the models should be made early enough to insure a good selection. With the large demands for space in most shows and the cost of exhibiting, it is seldom possible or advisable for a dealer to attempt to get a car of each model into his show display. Where only two or three models are shown arrangements can be made to have the complete line well displayed in the salesroom during the show. A definite plan can be prepared for getting the promising prospects out of the show and into the salesroom to see the models not in the show.

The next big phase of the dealer's show job is the management of the display during the show. All of the regulations to be observed in the booth should be formulated before the show opens and should be thoroughly explained to those who are to be on duty. Show attendance schedules should be settled so that each salesman's hours are short enough to avoid excessive fatigue. A dog-tired salesman is a liability at an automobile show.

Show Week Advertising

It is usually a good investment to "spread" a little in advertising during the show. The show ad should point particularly to the fact that the dealer's cars are in the show and it often is good practice to use some newspaper space to tell the story the salesmen are telling at the show. Above is one attractive show ad used last year. Its chief feature is the small space in which a particularly strong show appeal was made

Then, to put the plans into effect and insure strict compliance with them there should be a booth manager WITH AUTHORITY. The dealer or his sales manager cannot stay at the booth all of the time and there should be always present one person in complete charge. The reception of visitors in the booth is usually most satisfactorily handled in a manner similar to meeting customers in the salesroom. Show booths are more attractive and inviting when salesmen, not engaged with visitors, advance from chairs at the rear to meet newcomers instead of lounging in cars and on fenders, or conducting private little vaudeville shows for the pretty girls in the aisles. Show deportment is a subject that may well be given attention at a pre-show meeting.

A good slogan for every dealer in the 1923 shows is: "GET THE NAME." There are only a few of those supersalesmen left who can look at the size of a man's shoes and tell you whether he's going to buy a car in the next ten weeks. A good dealer organization will look a man up after he has visited the show booth. Most dealers supply their salesmen with memorandum pads or cards on which to record all the information obtainable concerning the people who come into the show exhibits.

In order to have an orderly way of collecting these names many dealers arrange to have a box in the booth into which the salesmen drop the cards. These are collected each night and on the following morning the selling effort in the form of a letter or a salesman's call begins.

A short meeting every morning of show week, in which the developments of the previous day are discussed and instructions are issued serves to keep the salesmen alert and enthusiastic.

Ask 'Em to Buy

Another good slogan for every dealer's show booth is: "ASK 'EM TO BUY." Some prospects wander around in shows and wander out and keep putting off buying because nobody happens to actually ask them to buy. To some it means parting with several years' savings and some real persuasion is required to bring about the decision to give up the money. It is a fact that one distributor in a big Eastern show two years ago experienced an increase in actual show sales of more than 50 per cent after issuing orders that every person entering the booth and giving the slightest evidence of interest be asked to buy.

Upon how well the work before and during the show has been done depends, to a large extent, the oppor-

Issuing Show Instructions to Salesmen

DEFINITE instructions, which outline in a general way the activities and conduct of persons manning the show exhibit are of considerable assistance in insuring better conducted exhibits. Many dealers find it helpful to issue a bulletin similar to the one shown below, either printed or typewritten, to every employee, and to make it the subject of a meeting during the week preceding the show. Such a bulletin not only establishes a code of ethics for the organization in the show booth, but it establishes the idea in the organization that manning a show exhibit is real, serious business if it is to be in a position to take advantage of the selling opportunities that the show provides. Perhaps you can use one this year.

C. J. Reilly, Inc., Desires That the Conduct of All Persons on Duty at the Sennett Booth in the Automobile Show, Fifth Regiment Armory, Jan. 7-14, Be Guided by the Following

Regulations

1—The booth shall be in charge of the salesmanager, who shall, upon receipt of this announcement appoint a first and second assistant who shall assume complete charge in the absence of his predecessors.

2—All retail salesmen and others on duty at the booth shall report their arrival and departure to the man in charge. Company officials and department heads will kindly observe this provision. It will facilitate their getting in communication with each other and their respective subordinates.

3—There shall be on duty at the booth at all times, in addition to the salesmen provided for in the attached schedule, one capable representative of the service department who shall be designated by the service manager.

4—Hats and overcoats shall not be worn by men on duty at the booth.

5—The use of tobacco in any form is prohibited while in the booth.

6—Men on duty at the booth shall refrain from lounging either in or around the cars, loud and boisterous talking, or any other actions that may detract from the dignity of the exhibit and bring criticism on themselves or the company.

7—Those not having business in the booth shall refrain from loitering.

8—Any inquiry that cannot be properly and promptly handled by the person to whom it is addressed shall be reported immediately to the man in charge who shall refer the matter to the proper person or department.

9—Any salesman who finds a prospect or receives an inquiry not in his territory shall, at the conclusion of the interview, refer the matter to the person in charge of the booth for reference to the proper person or department.

10—Any salesman handling a prospect outside of his territory by request or otherwise shall exercise the utmost courtesy and give the inquirer the same care and attention he would to his own individual prospect.

11—Get the name. In every interview, where there seems to be the remotest promise of a sale now or later, salesmen should get the name and address and all obtainable information concerning the visitor, record it at the close of the interview on the memo cards provided for that purpose and deposit it in the show prospect file.

12—Ask them to buy. Assume that every person who makes inquiries or shows other evidences of interest is in the market for a car, and before they leave the booth ASK THEM FOR THE ORDER.

13—Make definite appointments. Don't take, "I'll drop in to see you at the salesroom later," for an answer. Suggest a time for an interview or a demonstration during or immediately after the show.

14—Refrain from talking about other makes of cars. Don't knock. If a visitor inquires about some other make of car, ask courteously to be excused from discussion of a product you are not selling and offer to introduce the person to a salesman for the car mentioned.

15—Ask for prospects. Ask the person to whom you talk to tell you of any friends or relatives who may possibly buy. Make the suggestion: "Perhaps you know someone who might be interested in a car like this?" to visitors at the booth.

A FEW DON'TS	A FEW DO'S	
Don't guess.	Be courteous.	Be concise.
Don't argue.	Be cheerful.	Get the name.
Don't knock.	Be optimistic.	Make an appointment.

ASK FOR THE ORDER.

Above all else, C. J. Reilly, Inc., desires that no opportunity shall be lost during the show to impress everyone with the excellence of its product, the dependability of the company and the efficiency of its organization.

It expects every person who comes in contact with the public at the booth, in the salesroom, or at the service station to maintain at all times the attitude of unfailing courtesy and desire to serve.

Thank you.

C. J. REILLY, INC.
C. J. Reilly.

tunities for effective after show work. If the dealer has insured his pre-show advertising and publicity the attendance of a large number of prospects at the show, and if during the show he has interested and impressed many more who have visited his booth, and he has been particular to get their names and other obtainable information concerning them, he has laid the foundation for many weeks of profitable work after the show.

It is prudent to have a good system of after show follow-up to be put into effect as soon as the first show prospects are developed. Because of the large number of show prospects that do not give promise of developing into immediate buyers it is generally good practice to keep them segregated from the regular prospects until a salesman has made a complete after show report on them. Individual circumstances will, of course, always guide the procedure in handling show prospects. There will be some that are hot, and must be followed up before the show is closed. There will be others who will be scheduled for visits to the salesroom or demonstrations following the show. Only the best judgment of the dealer and the salesman, in view of the circumstances, will guide the course in handling these show prospects.

In every show salesmen meet a lot of congenial folk who like to chat about cars, who ask intelligent questions, who give every indication that they are interested in automobiles, but who are not in the market. There is always the possibility that some of this type of show visitors know people who are actively in the market for cars. It is a splendid idea to cultivate such visitors for the "tips" they may be able to give on live prospects. Besides favorably impressing them against the time when they may be prospects, the salesman who is courteous in his treatment of them and who asks them to suggest persons who might want to buy often may be led to sales through them.

The 1923 automobile shows are going to offer unlimited opportunities to the dealers who are prepared to grasp them. They are going to be of value to the individual dealer as selling events in proportion to the effectiveness of his efforts before, during and after the shows.

They are going to reward those who are prepared to take the favors they can bestow.

Will YOU be ready to TAKE them?

The Dealer's Show Month Calendar

ONE month is a short time for the dealer to give to preparation for the show. There are some things that can be done many weeks before, and it is well to give some time during the dull days of winter to planning and accomplishing some of these.

For the guidance of those who can use a memorandum of some of the more important pre-show arrangements, the following is presented:

Things to be done three or four weeks before the show—

1—*Begin a "Before the Show Sales Contest" to close up prospects before the show and line up prospects for closing at the show.*

2—*Plan pre-show and show week ads, invitations, letters, etc.*

3—*Plan the show week decorations for the salesroom and place order for palms, ribbons and other materials needed.*

4—*Decide on type of memo cards or pads to be used by salesmen in show and place order for printing.*

5—*Decide on models to be exhibited at the show and on salesroom floor and arrange with factory for delivery.*

6—*Attend to any painting, decorating or other things that are considered necessary to put salesroom, service station, office, etc., in good shape for reception of show prospects.*

Things to be done the second week before the show—

1—*Begin telling the public in ads to look for you at the show.*

2—*Begin a series of sales meetings, taking up study of new models, review of present models, talks on show deportment of salesmen, etc.*

3—*Select furniture and decorations for booth and plan it by marking of space on the salesroom floor and arranging models to get best appearance.*

4—*Organize salesmen for shows, appointing booth manager and assistants and making out attendance schedule for salesmen.*

Things to do in the week preceding the show—

1—*Touch up show models and get them ready to be moved into exposition building.*

2—*Mail show invitations and tickets.*

3—*Decorate salesroom for show week.*

4—*Strengthen advertising in local papers, directing attention to your participation in the show.*

5—*Hold a meeting of entire organization and issue instructions concerning definite duties of each department and individual during the show.*

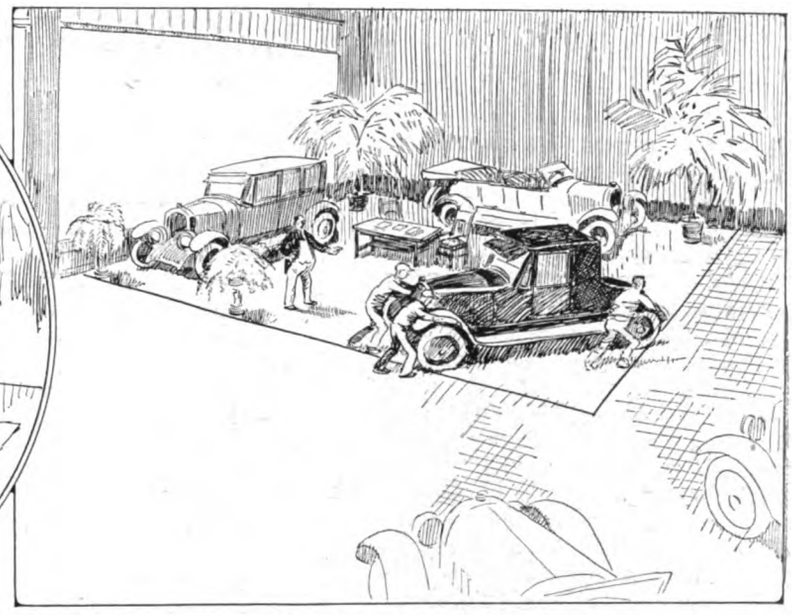
Among Ourselves

THIS is just a little chat between the editor and his readers—about this and some other numbers of Motor World.

This number gets us all set right for the show season, gets us to realizing that it isn't merely a show season, but a selling season. From opening to closing page this number is devoted to selling before, during and after the shows. Particularly will the many pages presenting the merchandising analysis of the 1923 car be of value, not only around show time, but throughout the year. This series of stories begins on page 38.

And did you notice the remarkable salesmanship story in last week's number—Dec. 20? We're talking about the article by C. S. Henshaw, Boston Dodge Brothers dealer, giving many practical suggestions for selecting, training and controlling a retail sales staff and containing ideas for salesmen as well as dealers.

Next week—Jan. 4—we shall have another strong story on the sales side of the business, presenting the plans and ideas of dealers in various parts of the country and in varied kinds of organizations regarding ways of compensating motor car salesmen.



The following week—Jan. 11—Motor World will carry a detailed report of the New York show opening Jan. 6, with text and illustrations telling the story of the show and describing the new models and refinements. You needn't miss the New York show because you can't attend it. You can see the show in Motor World.

The Salesman's Opportunity in the 1923 Shows

How He Can Make Them Produce More Sales and More Money for Him

"IS the luggage compartment in that coupe pretty roomy?" inquired the show visitor who was on the committee to present the pastor with a car on his silver jubilee.

"About forty quarts if they're carefully packed," flippantly retorted the salesman, who looked in vain for the appreciative smile on the prospect's face.

"Funny old crab," the salesman confided to another a few moments later. "The way he looked at that 'coop' I thought he was a live one, but he went cold on me all of a sudden. 'Nother half hour wasted on a dead one. Never did think much of the kind of people that came to the shows."

The Sunday School made the presentation that spring—a nice little coupe, but it wasn't of the make sold by the salesman who talked to his prospect in the lingo of the bootlegger.

All of which is to say that the salesman who would turn into profit for himself and his firm the opportunities of the 1923 show must take his part in it seriously and study how he can best introduce and sell his car before, during and after the show. He ought to hoist his hand and solemnly resolve NOW that if the 1923 show doesn't produce more real "jack" for him it won't be because he didn't make a 100 per cent show selling effort.

Quick, the Pencil!

The 1923 shows are going to be selling shows more than any that have gone before. They're going to be real pencil and contract parties, and there isn't going to be much after-show "pickings" for the fellow who isn't right up on the firing line doing his prettiest and asking 'em to buy—every minute.

Competition is going to be keen next spring. Organized selling effort is going to be better in the dealer show exhibits—many of the good outfits are planning their show selling campaign now—and the salesman who doesn't go into the 1923 show in his town thoroughly prepared will be starting way back of scratch.

There's going to be a lot more in the 1923 automobile shows for the salesman than living for a week in the shimmering show lights. There's before-show study—real old skull practice on mechanical details, selling points, closing prospects and using his personal powers to bring prospects into the show. There's meeting new faces and learning new things about the tastes and desires, and personalities of show visitors. There's the close study of prospects' peculiarities and hobbies and recording them for use in after-show selling. And—oh, boy—there's the mopping up of all the brand new leads that the show has made possible for the salesman if his work in the show has been done sincerely and thoroughly. And, best of all, there's more money for him as the result of a big job well done.

A SOUTHERN preacher of color, asked what made his sermons so interesting and convincing to his flock, said:

"Well — fust I tells 'em what I'se gwan ter tell 'em—den I tells 'em — den I tells 'em what I told 'em.

Isn't it a pretty good formula for the salesman's show time work?

Suppose, before the show, he tells 'em what he'll show 'em—and at the show he shows 'em what he's told 'em — and after the show he tells 'em what he's shown 'em—

Guess it would interest and convince a flock of prospects, wouldn't it?

Try it!

The salesmen in the 1923 shows are going to have to know more about the mechanical details of their cars—more of the whys and wherefores of the mechanical features of their cars—if they are to be prepared to answer intelligently the questions a motor-wise show attendant will ask. Further along in this number of Motor World there is a lot of information that can be of material assistance to salesmen in the 1923 shows—articles that give the reason for the use of certain types of units in certain types of cars, and how to best sell these features to show prospects. Read 'em.

Salesmen, like men in every other calling, often become so engrossed in the details of their particular jobs that they lose the vision of their bigger and broader functions in the industry. They fail to remember, sometimes, that they are, to the person whom they are trying to sell, the living, breathing, moving personification of the companies they represent—that their employers, their cars, and everything upon which they depend to make their livelihood are being judged by their own actions. How often we hear laymen say: "That's a high class outfit, I was just talking to one of their salesmen"—or the reverse. A salesman chirping at a girl in the balcony, stealing a little beauty sleep in a sedan or talking loudly across the aisle isn't going to impress the observer, who may be a prospect, with the dependability of a firm that employs that type of representative.

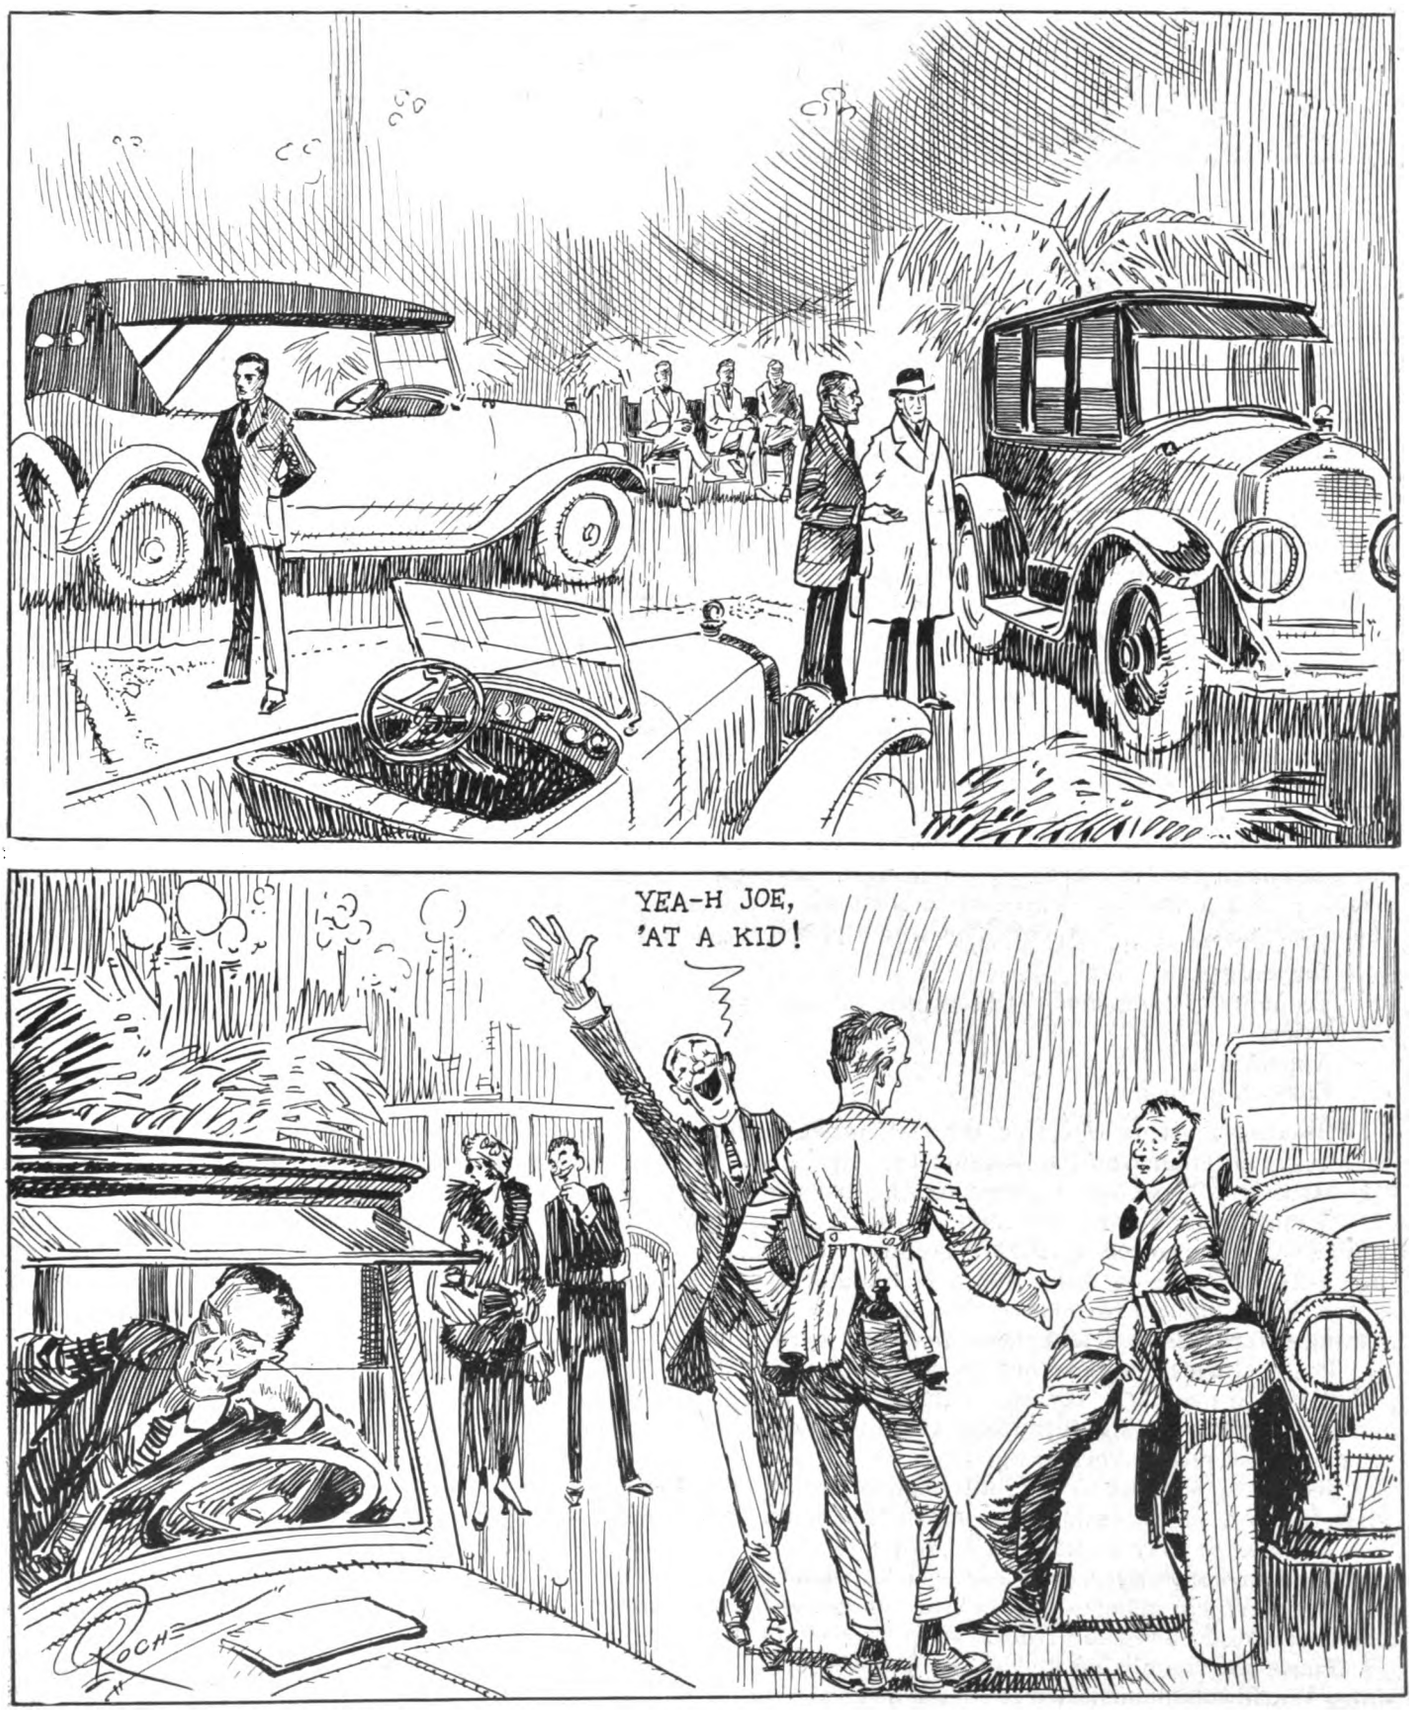
There are two little B's that produce the honey of after-show results in good volume for the show salesmen. They are B-CHEERFUL and B-COURTEOUS. Use them.

Thanks, for the Order!

And, above and beyond all else there is one thing that the show salesman MUST do to get results. That is—ASK 'EM TO BUY. How do you know a man won't buy if you don't ask him. Maybe he has coddled that little bundle of Liberty Bonds for four long years, and he has come to have an idea that the fellow who wants it in exchange for a motor car is going to be interested enough to ask him for it.

Perhaps there's a piano, or a fur coat, or just a coat of paint for the house next spring that has a fellow's decision to buy a new car eclipsed for the time. How do you know if you don't ask him to buy?

There's no one in the industry who is going to have so much to do in making the 1923 shows sell motor cars as the motor car salesman.



The very prosperity of the industry depends on how well he does his job.

And the place to begin doing the job right is in the 1923 shows.

Isn't It So?

Same Exhibit, Same Salesmen, but What a Difference Show Deportment Makes

Digitized by Google

Selling the 1923 Motor Car

Things Dealers and Salesmen Can Do at Show Time and After

THE average man contemplating the purchase of a car decides that he can afford to spend a certain amount of money. Having made this decision, he considers the various makes and models that can be bought for the amount of money he has to spend. He eventually buys the car that he has been convinced gives him the greatest value for the money he pays for it.

However, those features of motor car design and construction that make a particular car valuable to one prospect may be of little importance to another prospect. The basis by which motor car value is measured varies with the prospect. The salesman who convinces the prospect that the car he sells is the best value when judged by the prospect's own standards is the one who gets the order. Getting the prospect's signature on the order, therefore, depends on the ability of the salesman to do two things:

1—To determine by what standards the prospect with whom he is dealing measures motor car values.

2—To present arguments that will show the car he sells is the best value according to these standards.

Although the standards by which different people judge motor car values vary, and although different people attach a varying degree of importance to the same standard, it is possible and desirable to classify these standards. The standards by which prospects most frequently judge values are:

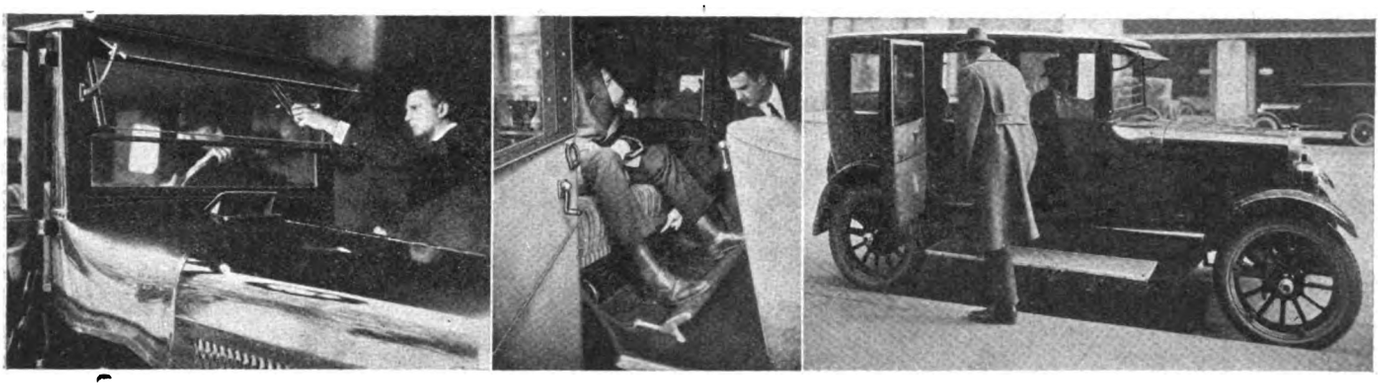
Durability.
Economy of operation (includes gas, oil, tires and maintenance).
Price.
Appearance.
Ease of operation.

Because most prospective buyers measure motor car value by one or more of these standards, the dealer or salesman who has studied the car he sells to determine why it is valuable when measured by these standards is in a position to convince the average prospect that his car is the one to buy.

Some of the things the manufacturers have been doing during the past year to make their cars more salable when measured by these standards are described on the following pages of this number. It has been impossible to tell everything that every manufacturer has done to make his product more salable. Instead Motor World presents a picture that shows how the 1923 models generally have been made more salable, making references here and there to specific cars.

These stories are designed to accomplish two things.

First, to present a review of the changes and improvements that have been made in the 1923 models, and to interpret the significance of these changes by pointing out their relation to the standards by which prospects measure motor car value.



Second, to suggest to the individual salesman or dealer how he may analyze the car he sells to find out what features of its design or construction make it salable in the eyes of the prospect.

The stories were written by J. Howard Pile and Donald D. Blanchard, technical editors of Motor World, and J. Edward Schipper, field engineering editor.

Motor World believes the stories will prove of practical value to all its readers engaged in the merchandising of motor cars and of interest to its readers in other divisions of the business.

These merchandising stories are indexed on the opposite page. They begin on the page after that. Motor World commends them to its readers.

Ideas to Help Sell the 1923 Car

Look for Them in the 25 Pages Following This Page

Do You Know Why Car Prices Are Lower? Page 40

This story tells how better cars are being built and, at the same time, selling at lower prices than ever before in spite of the fact that there have been no reductions in material and labor costs comparable to reductions that have been made in motor car prices. This result has been obtained through more efficient production methods.

Lower Priced Closed Cars a Big Sales Help Page 43

The margin between closed car and open car prices is not so large as it was a year ago. This has been an outstanding development of the year and undoubtedly accounts for the unusually heavy demand for closed cars. The application of quantity production methods to body building has reduced manufacturing costs and made lower prices possible.

Development of the Business Man's Car Page 44

What the business man looks for when he buys a car for business use. This story brings out the points that must be used in selling a car to this type of prospect and also describes special models produced by some manufacturers for this purpose.

More Miles to the Car, a 1923 Selling Point Page 46

Depreciation on the 1923 cars will be less rapid and it will cost less to maintain them, because they are stronger and more durable in every way. This story points out some of the things that have been done by different manufacturers to give their products greater endurance. Dealers and salesmen should study their cars from this viewpoint as it is one in which most prospects are particularly interested.

It Costs Less to Maintain the 1923 Car Page 50

Repair bills will be lower on 1923 cars. Better materials and workmanship will make the parts last longer and more accessible design will make repairs less costly when they are necessary. This is an important selling point and is one that will interest the prospect.

Greater Comfort in the New Cars Page 53

Riding qualities have been improved and, from a mechanical standpoint, operation is smoother and quieter. Upholstery is more comfortable and the new bodies provide more leg room. Open models offer greater protection from weather.

It's Just Fun to Run the Modern Car Page 56

Nearly all cars are owner driven. Consequently ease of operation from the standpoint of the driver is a most desirable feature. This point has been given careful consideration in practically all of the 1923 models. This story tells what some of the makers have done along these lines.

1923 Cars Are Easier to Maintain Page 59

Maintenance jobs that most owners take care of themselves are easier and simpler to perform on the new cars. As a result, owners will be less likely to shirk these duties. Greater satisfaction with the car is certain to follow.

They've Quit Juggling Motor Car Styles Page 61

This year's cars are not materially different in appearance from last year's or even the 1921 models. It seems probable that there will be no material changes for several years to come. Consequently, the new cars will not quickly become old fashioned in appearance.

Operating the New Cars Less Expensive Page 64

Every prospect is interested in what it is going to cost him to run the car. This story tells how to analyze operating expenses and what has been done in the new cars to reduce them.

Digitized by Google

Do You Know Why Car Prices Are Lower?

Can You Tell a Prospect Why They Are?—Read This Story of Manufacturing Economies

CARS were never so good nor prices so low as they are to-day. The 1923 models offer better transportation, greater durability, greater freedom from minor troubles, additional riding comfort and all around higher grade of performance and improved appearance.

And prices to-day are lower than ever before.

Such a condition would apparently indicate that materials and labor are cheaper. While this is true when compared with wartime conditions, nevertheless, even the drop in these two items as compared with the year of 1918, does not account for the difference in price.

Better Production Methods

There is but little doubt that the tremendous advances which have been made in production methods are chiefly responsible for this remarkable accomplishment. The improvements go from one end of the line to the other. Raw materials are better, methods of manufacture are better, inspections are closer, assembly is more carefully conducted, and yet, with all of this added value in the product, the manufacturing departments are turning over the cars to the sales department for about the same money as in the pre-war period.

In the light of present day knowledge, the automobile factory of ten or even five years ago was a most wasteful organization. The amount of money thrown away in the manufacture of automobiles would, if it had been saved, have made such a drastic difference in the prices of cars and in the profits of manufacturers that the entire price history of automobiles would have been changed. The reason that automobiles of to-day are cheaper and better is that some of this money has been actually saved and the rest of it has been turned back into the manufacturing industry in purchasing better materials and workmanship, and the remainder has come off the price of the car. To put this in another way, if we were to have made the same automobile as we are getting to-day by the methods used seven or eight years ago, it is safe to say that prices would be at least 35 to 50 per cent higher. The manner in which this saving has been accomplished forms one of the most interesting phases of automotive history.

The war rendered a service to the automotive manufacturing business which cannot be overestimated. The advances made as a direct result of the war represent a development period which would have extended over at least twenty years. The close manufacturing limits insisted upon by our own and foreign governments in the manufacture of war materials simply staggered commercial manufacturing organizations when they were first brought to face the problem. With remarkable adaptability, however, it was not long before gun parts, aviation engines and other units which required these close limits, were being turned out in quantities that the government officials themselves did not at first believe possible. It was a fortunate matter, indeed, that it was to the automotive industry with its equipment of high speed tools that most of these exacting tasks fell. It is not difficult to trace a great part of the manufacturing ability to produce high grade products at low cost to the lessons thus learned.

It did not take the engineer long to realize that he could cut the cost of manufacture by so designing the products that the number of points in which very close limits were to be maintained were kept at a minimum. In other words, the product had to be designed not only for performance, but also for manufacture. The chief engineer has ceased to be a czar in the factory, as far as design is concerned. After he has finished the design, it is turned over to the production engineer with instructions by the management to make any modifications necessary to make the product more readily manufactured, without, of course, affecting performance. In other words, after the production expert has finished his survey of the design and has recommended his changes, it goes back to the chief engineer who ascertains if any of the production changes made have affected performance. If so, a compromise or change is made so that the final product is designed to attain the maximum of performance with the minimum of manufacturing cost.

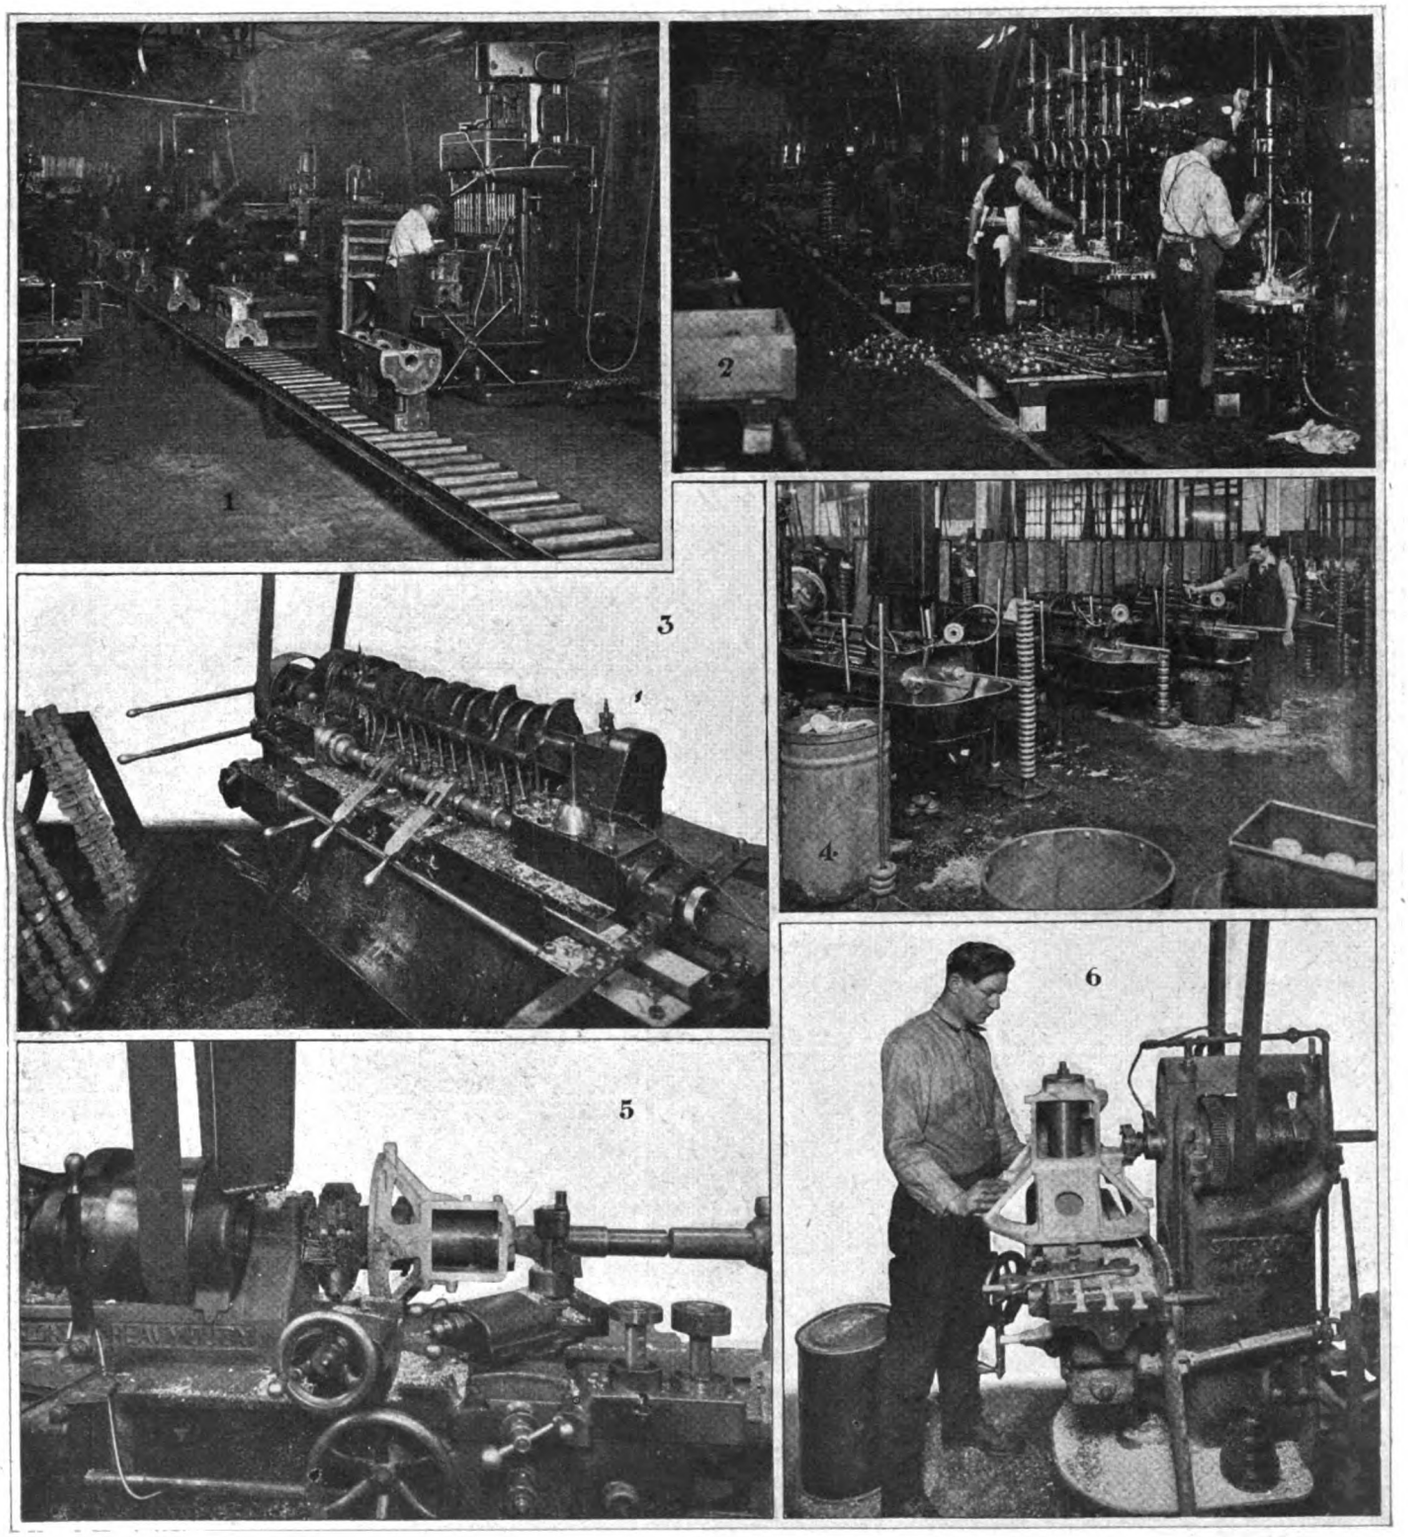
All of this should not be taken to mean that manufacturing costs on our present automobiles have been cut to their limit. Improvements are now going on which will still further advance the factory to the unattainable but ever sought 100 per cent efficiency. Of course, along with this, improvements in performance are always being made so that year by year we can always expect automobile values to be better. That is, a longer life for the car with all of the other features an owner desires for less money.

Specialized Machines

When a big manufacturer outlines his program for the manufacture of a model, if he is to be successful, he has to enter into the matter whole-heartedly in order to make it a commercial success. He has to purchase machines which will do the work in the most economical manner. He has to line up his entire manufacturing organization for this product. This represents the investment of a large sum of money, so that it is quite apparent that, if he is going to make a commercial success of the proposition, he must have assured himself that he has made no mistakes and that he will not have to change his model for a considerable length of time. Too frequent change of models is disastrous at this stage of the industry. With the machine tool art developed to the extent that it is to-day, a manufacturer can, for a well designed product, purchase single purpose machines which will do the work in remarkably short time. If the manufacturing schedule is big enough to keep these machines busy continuously and over a sufficient length of time, he is justified in their purchase. This development of the machine tool art has been responsible for the reduction in the number of changes of models by the important manufacturers in the business.

The smaller manufacturer can hardly afford to purchase these tools, as he can-

Better Cars at Lower Prices



AUTOMOBILE prices have been reduced out of all proportion to any drops in material and labor costs. Manufacturing economies have made the price reductions possible. New and improved machinery and methods have reduced the labor costs per car by reducing the number of hours of labor required to make it rather than by reducing the rates paid the workman. The elapsed time from raw material to finished product has been reduced, which means smaller carrying charges.

The automotive industry has played fair with the public. It has passed the benefits of these economies on in the form of reduced prices. In many cases prices have been reduced to produce a volume of sales that would permit manufacturing economies that would justify the reduction

The salesmen of the industry are fortunate in having a product to sell that is better and less costly than ever before. Prices are down, but quality is up.

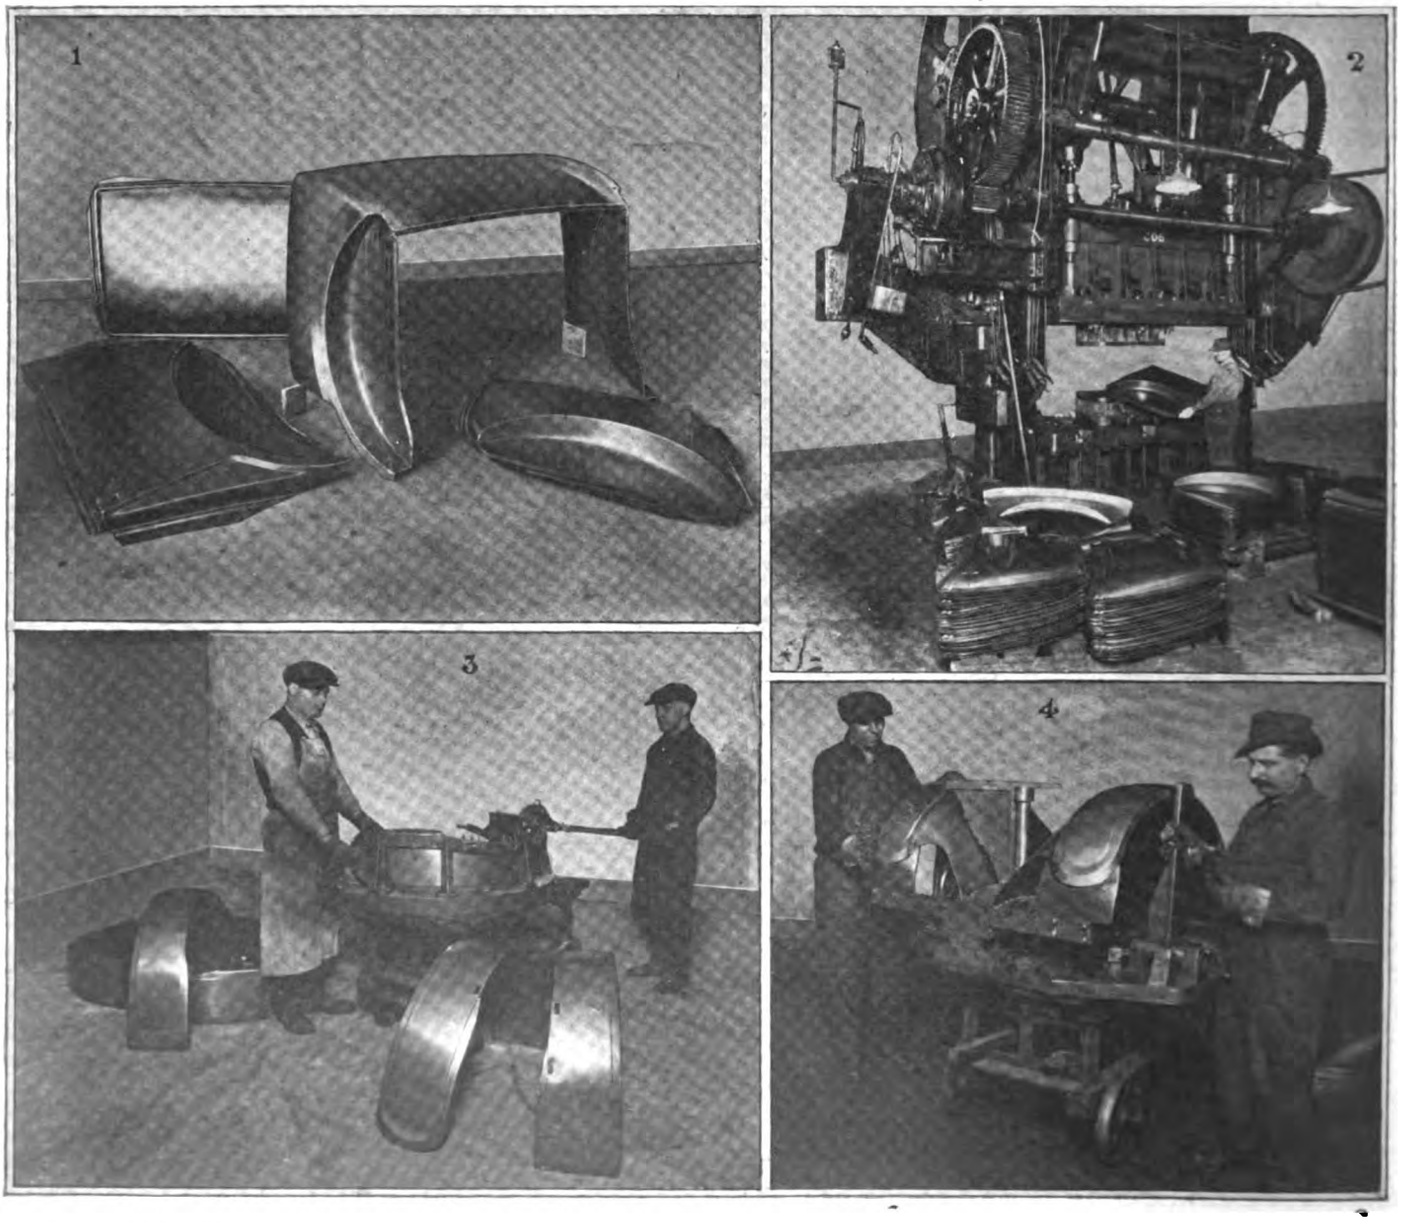
Machines Mean Accuracy, Interchangeability and Lower Prices

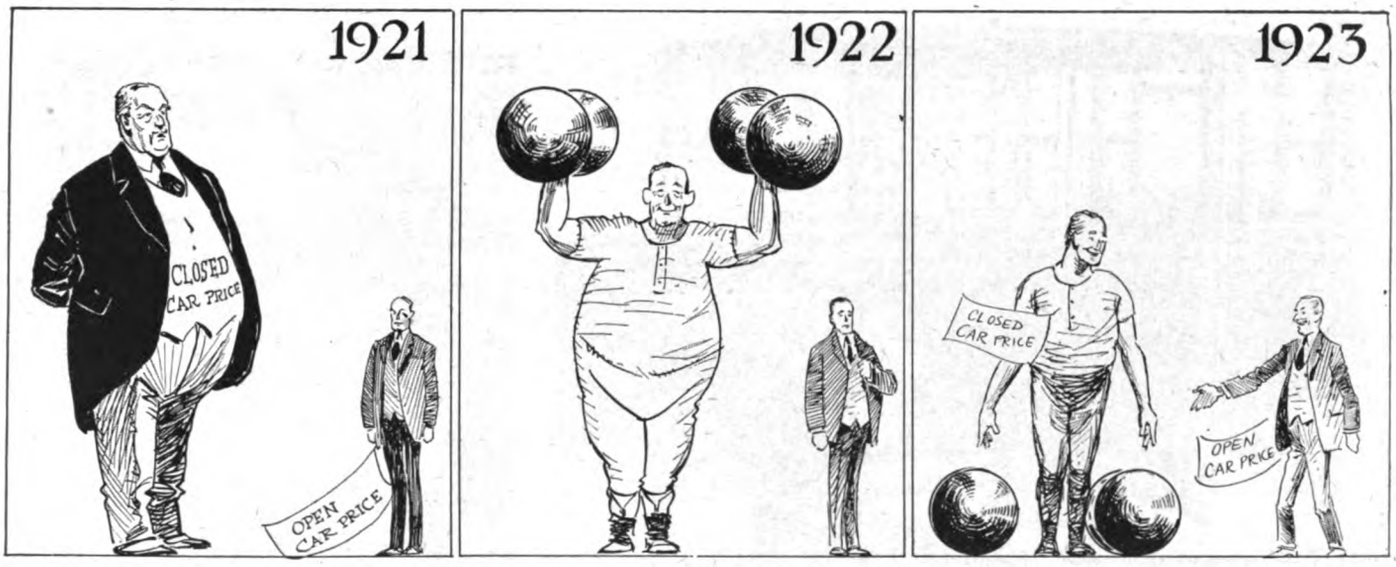
Here are shown a few of the modern machine layouts that are helping to lower costs through greater volume, accuracy and ease of final assembly. 1—*Six months ago this same aisle in the same factory was crowded with men despite the fact that production was lower than at present.* 2—*Two men on connecting rod operations that formerly required five men.* 3—*An automatic camshaft machine that completely roughs the camshaft, a hitherto impossible feat. This releases one man.* 4—*One man operating five machines which are broaching gear blanks.* 5 *and* 6—*These two operations on the bell housing and gearset housing are side by side and are performed by one man*



Digitized by Google

not keep them busy enough to pay for themselves and, consequently, he is unable to manufacture as cheaply as the big manufacturer. However, the smaller manufacturer gets around this problem by purchasing parts from the outside where they are made in factories which manufacture on a sufficiently large scale to utilize the machines. Consequently, although he must pay a profit to the parts manufacturer, he is able to derive the benefits of the increased efficiency of machinery, and to offer his product at a competitive price.

There is another phase in the handling of manufacture which has had just as big an influence on the reduced price of cars as improved machine methods, and this is the tremendous reduction which has been made in the capital invested in parts in process. The shorter the period of time which elapses between the moment that a piece of raw material enters the doors of the factory and the moment it leaves as a part of a completed vehicle, the less that part has cost the manufacturer. To put this in another way, big inventories and slow manufacturing methods go hand in hand to increase the capital required to manufacture the product. The interest on this invested capital must naturally be added to the cost and must be paid by the purchaser. To-day we are working for smaller inventories; we are sending the materials through more rapidly and, consequently, it is costing less to make. Furthermore, intermediate stockrooms are being abolished wherever possible and parts, which used to leave the machine shop and repose for weeks and months in a finish stockroom, now leave the manufacturing department and go directly to the assembly floor and, consequently, costs the manufacturer less and results in a lower-priced vehicle.



These and similar economies answer the question: "Why can we build cars better and yet cheaper?" It is a question which is often asked, and with a knowledge of these internal economies which have been effected, is not difficult to answer. In some factories previously loosely managed but now handled on a true economic basis, the reductions have been tremendous. And, furthermore, the savings are still going on and will continue to be made with the result that we can normally expect ever increasing quality at a reduced price.

Production Methods That Have Reduced Car Prices

Parts which will go together without hand fitting, filing or forcing play a big part in the reduction of prices, especially on closed cars. Making units to jigs or gages and the use of sub-assemblies in body building permits better workmanship in a shorter time. 1—*Assembly of a back panel and two side panels with the wheel housing welded in place.* 2—*A* 500-*ton press for stamping out exact duplicates rapidly insures a perfect fit of the parts.* 3—*A jig for bolt holes. The jig is curved to fit the finished shape of the fenders.* 4—*A jig for checking fenders as to contour, length, width and mounting dimensions*

Lower Priced Closed Cars a Big Sales Help

An Interesting Story of the Things Makers Are Doing to Cut Down the Differential

LARGE decreases in the margin between closed and open car prices have been an outstanding development of the past year. Much of the unprecedented demand for closed body styles, that has developed recently, is undoubtedly the result of these reductions in closed car prices, which have been made possible by the application of production methods to body building. Economical manufacturing methods have made the low priced automobile possible and adaptations of these methods are doing the same thing for the closed body.

The public wants closed car comfort. In the past, the big stumbling block in the way of the satisfaction of this desire has been cost. Closed bodies have cost from 40 to 60 per cent more than open bodies. As long as this condition existed, closed car sales were held back. Now, however, the public can buy closed cars at from 20 to 30 per cent above the open car price, and closed car sales have grown by leaps and bounds as a result.

Lower Priced Closed Cars

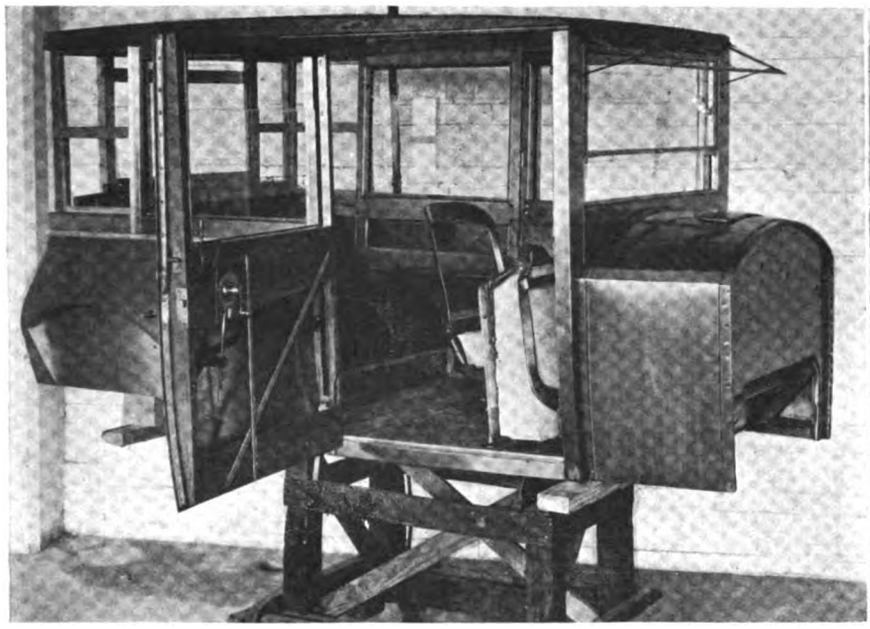
It has not been possible to produce a closed car at the present low prices that would compare in every respect with the higher price jobs from the standpoints of appearance, finish, ornamentation or convenience. The higher priced jobs were practically custom built—each body a separate job. That is why they cost so much more than the open models.

The new low priced closed cars, however, have all the usefulness of the higher priced ones and they are satisfactory as to appearance and finish. They offer complete protection from the weather. They can be closed in by raising the windows for winter use and opened for summer use by lowering them. They are well and substantially finished both inside and out but costs have been reduced by the elimination of things that add nothing to the utility of the body. For example, in the Essex Coach, all screw heads are exposed. This would not be tolerated in the higher price job but is permitted here to secure low cost.

The economical production of closed bodies on a quantity basis means the manufacture of the parts of the body completely and the later assembly of these parts into the completed body. This means that the body must be designed for manufacture in this manner and the manufacturing methods must be accurate to permit assembly on this basis.

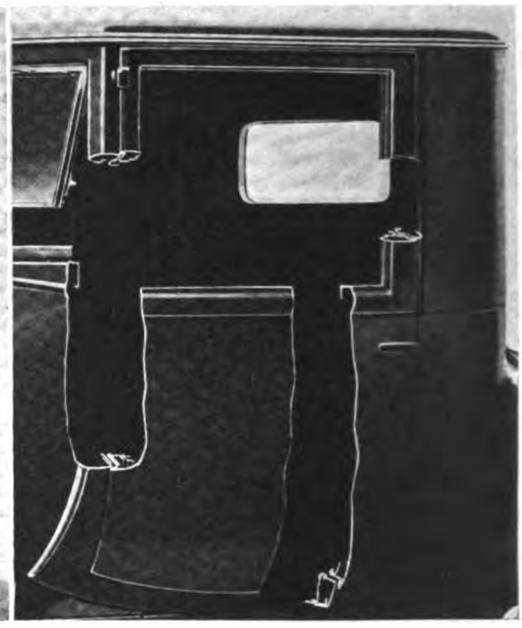
The Essex Coach was the pioneer body in this field and the methods employed in its manufacture illustrate splendidly the quantity production of closed bodies. The elimination of curves and of curved surfaces was a potent factor in reducing the manufacturing cost on this body. Practically all wood pieces in the body frame work are cut on straight lines. This materially reduces the cost of preparing the wood framing for assembly and, in some cases, makes the assembly work easier and more readily handled on an interchangeable basis.

The use of two doors in place of four permits another saving. The usual window runners have been replaced with felt liners. The glass operates between two fixed lining strips of felt. These assist in supporting the glass and prevent rattling.



The body construction is such that it is possible to put it together in a number of sub-assemblies. The body may truly be said to be assembled instead of being built in the usual way. Very little tacking is done from the inside of the body as this can practically all be done before the parts of the body are assembled. The roof furnishes a good example of this method of construction. The entire roof is a sub-assembly and is a soft top type covered with artificial leather. The actual ceiling or roof lining is stretched across the top of the body before the roof is put on. This allows tight fitting and does away with a good part of the usual interior tacking and trimming work. The roof is then put on over the top of the lining as an independent assembly.

Window Standardization



Further economies have been made by having similar parts of the body the same size. For example, all four window frames are the same size. This also means that all four pieces of glass are the same size and consequently there is no fitting of right and left in putting the body together. All plaited upholstery is detachable and, as a result, this work can be done where there is plenty of room and assembled when the body is complete.

It is important to note that none of the economies detailed in the foregoing in anyway affect the quality of the body. It is a strong, rigid structure, carefully made of good materials and the paint work is not slighted in any way. It has all the closed car utility with none of the frills that add to the cost of manufacture.

The Essex Coach is an example of closed car production economy brought about by eliminating curved pieces and by using sub assemblies

Dodge all-steel sedan has stamped parts and baked enamel finish

The Jewett closed bodies are another example of low cost manufacturing. The Jewett sedan is a four-door job of conventional appearance selling at about 35 per cent above the open car price. The pressed steel parts for this body are made in one plant and assembled in another. They are made so accurately, however, that no assembly difficulties are experienced. The rear wheel housing is pressed out of a single piece of sheet steel. Manufacturing this part in this way eliminates several welding operations. In some cases the pressed steel parts are welded together into sub-assemblies that can be attached to the body frame as a unit. Holes for attachment are located by jigs, which further facilitates that attachment of these pressed steel parts as there is no drilling to be done when the bodies are assembled. The cowl is stamped out in several pieces which are later welded into a sub-assembly which is readily attached to the body frame. The pressed steel work is so accurately performed and the inspection is so careful that hand fitting of these parts to the frame has been materially reduced, with consequent reductions in cost.

Pressed Steel Popular

There has been a tendency all through closed body work to use pressed steel parts in place of wood. This eliminates considerable hand fitting, thus resulting in lower closed car body costs. Much expensive hand work still goes into the upholstery operations and the industry is striving to find some means of reducing these costs. This work requires highly paid labor and must frequently be done in positions that prevent rapid work.

The all-steel closed body is another development that means lower prices. The production of bodies in this manner requires dies to press the steel into shape for use in the bodies. These dies are large and expensive to make and, consequently, this manufacturing method is only adapted to large quantity production bodies. These large dies only result in manufacturing economies when the cost of making them can be distributed over a large number of bodies.

Dodge Brothers are making bodies of this type. To offset the cost of dies, the elimination of wood in these bodies results in economies and the paint work is much less expensive as two or three coats of hard baking enamel replace 15 or more coats of paint. The baking on process of finishing is made practical by the steel construction. Because of these manufacturing economies, the all steel sedan sells for only about 10 per cent more than the open models.

Development of the Business Man's Car

Some Special Models Produced—Other Closed Bodies Give Satisfaction

THE automobile is a part of the modern business man's equipment. The executive with a car at his command is not tied down by railroad schedules nor does he lose time waiting for street cars. The salesman with a car is able to increase his activities greatly. The professional man finds that a car reduces the time he spends on the road. Every day more business men are turning to the automobile as the best all around means of transportation.

Some car manufacturers have recognized the possibilities of this sales field by producing special body models for the business man. Among these are Dodge Brothers, Chevrolet, Liberty and Hupmobile. Other makers are offering their regular models for this purpose.

The business man's car must be economical and dependable. The cost of operation must be a minimum, as this expense comes out of the business, thus affecting profits. It must be reliable because business has to use it every day. In most cases, it will have to be a comparatively low priced vehicle because the average business man will want to keep his investment as small as possible and also because of the effect that first cost has on the cost of operation. These selling points are discussed in other articles in this number of Motor World.

In addition to these, the business man's car must provide for the comfort of the driver and the transportation of his luggage. The closed car is usually the better type for the business man, especially if he be doctor, executive or salesman.

Digitized by Google

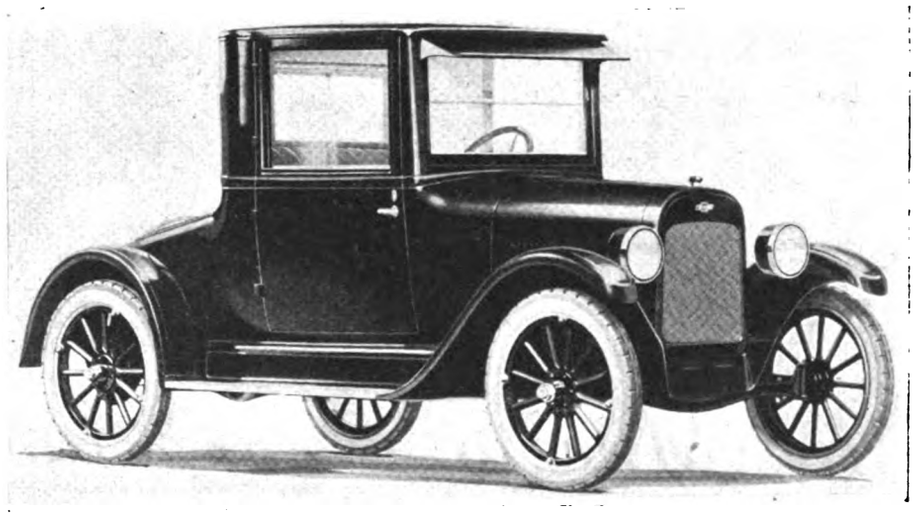
Generally, the coupe will be found to be best adapted to the needs of this field.

The business man's car must give complete protection from the weather. This is necessary for the driver's health and comfort as he must drive under all conditions of sunshine and storm. Furthermore, the business man must look well on arrival at his destination as his appearance may have considerable effect on his success in a business way. Only the closed car offers this sort of protection.

Ease of Operation

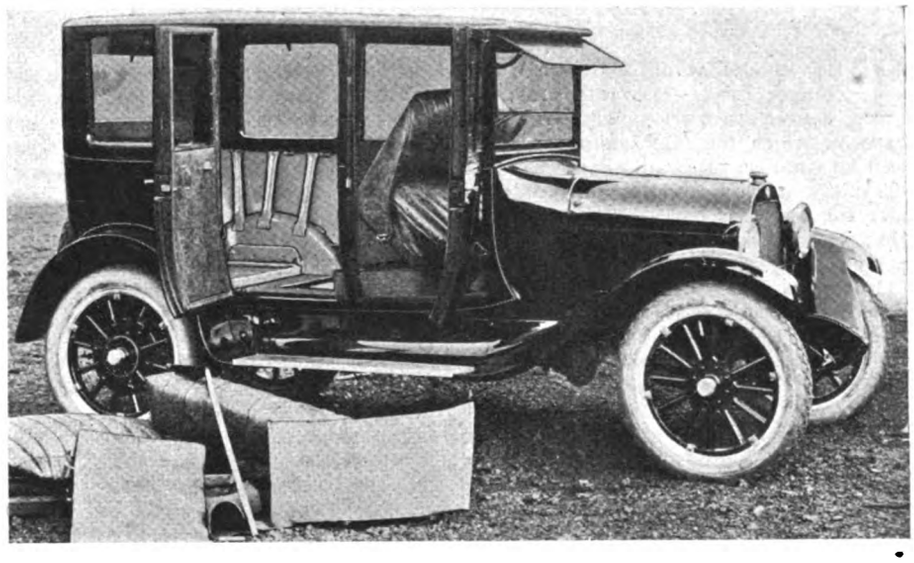
In selling, the ease with which the car is operated should be emphasized, as the business man will drive it many long hours every day and it is desirable that driving cause him as little fatigue as possible. Such features as an easy working steering gear, the convenient location of the controls, and the light action of the clutch and brake pedals should be brought out in this connection.

Luggage space is another very important consideration to the business man. The compartments provided for this purpose must be spacious. It must be easy to get baggage or sample cases in and out of the luggage compartments.



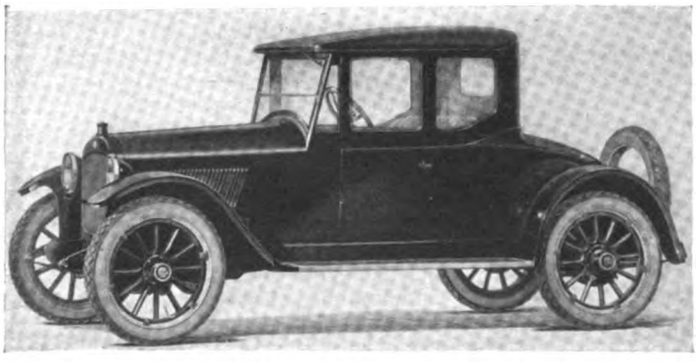
The Dodge Brothers business coupe was one of the pioneer bodies to be built specially for this field. It is an all-steel construction which gives a strong body and permits of a baked finish which is both cheap to apply and durable. The interior upholstery is leather. The Chevrolet coupe is a somewhat similar model.

The Dodge Brothers business sedan is the only one of its kind. It is an all-steel construction with baked on finish. The upholstery in the rear is removable so that this entire space may be used for luggage, and the front seat tilts forward to give greater width to the entrance to the rear compartment.

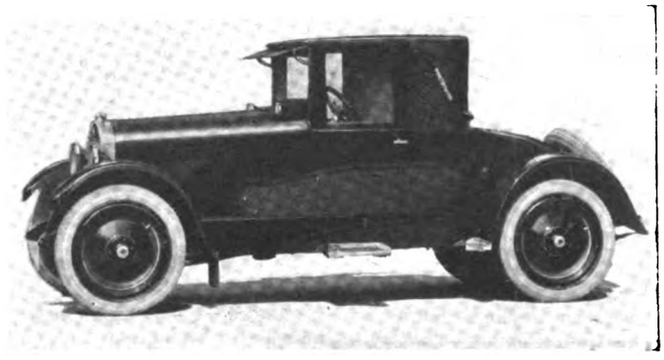


Liberty and Hupmobile have provided closed models for this purpose that sell at about 20 per cent above the open models. In the Liberty, the top is a substantially constructed steel unit of unusual rigidity. The luggage compartment is in the rear deck, the door to this compartment being about 25 x 14 in. which permits the entry of rather large cases. Equipment includes sun visor, cowl ventilator, clock, cigar lighter and door locks. The clock and cigar lighter are useful fitments that add to the salability of the vehicle. In the Hupmobile roadster-coupe, there is space for a suitcase in back of the seat as well as a commodious luggage space in the rear.

Whether a dealer has a special body model to sell to this field or must depend on the regular line of bodies, he must arm himself and his salesman with definite information on the model he is selling to business men. This information should cover the following points:



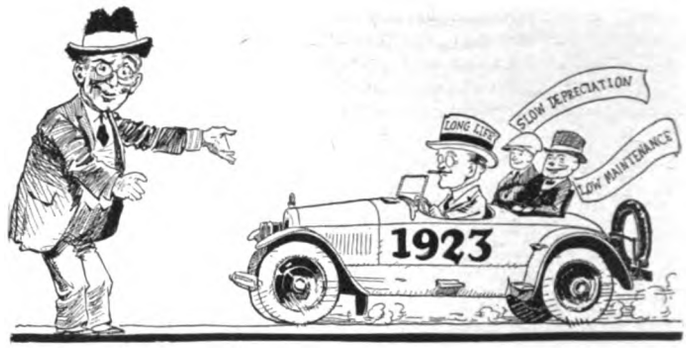
1. **Economy of operation.**
2. **Reliability.**
3. **Protection of driver from weather.**
4. **Ease of operation.**
5. **Provisions for carrying luggage.**



The Chevrolet utility coupe, a low priced car that is economical and offers protection from the weather. This is a satisfactory type for business use

The Dodge all-steel business sedan. All the space in back of the front seat may be used for luggage as the upholstery is removable and the doors are wide.

The Hupmobile roadster-coupe which has a large carrying space in the rear deck making it suitable for business purposes



The Liberty business coupe, which, except for the top, is similar to the roadster. There is a luggage compartment in the rear deck

THE NEW THREE-PASSENGER CAR

THE salesman of the motor car industry, who had "something to sell" in the 1922 car, will find himself in even better position to approach prospects with the 1923 automobiles. They will run more miles, depreciate more slowly and cost less to maintain than any car ever built. This story points out some of the "high spots" in this DURABLE 1923 CAR. It shows how dealers and salesmen can dig out information regarding the cars they sell, so as to be able to present them effectively to discriminating prospects.

More Miles to the Car, a 1923 Selling Point

The Modern Automobile Also Will Depreciate More Slowly and Cost Less to Maintain

THE public wants cars that are longer lived. It wants cars that depreciate more slowly. It wants cars on which the maintenance expense will be smaller. It wants cars that will operate smoothly, quietly and economically for a longer period. It wants cars that will retain their new appearance for a longer time.

Prospects are motor wise. Most of them have owned at least one car. They appreciate the importance of buying a car that lasts—one that wears out slowly. Their own experiences or, in any case, the experiences of their friends, tell them that depreciation is the biggest expense in connection with the operation of a car. Prospects are evidencing this interest in durability by such questions as, "How much can I get for it when I want to get rid of it?" and "How much will the repair expense be during the first year?"

Longer Life and Less Repairs

The factories are making strenuous efforts to enable dealers and salesmen to furnish satisfactory answers to these questions. They are putting better materials into the cars. The parts are being manufactured more accurately and greater care is being used in inspection and assembly. Designs are being changed to give longer life and greater freedom from repairs. *The 1923 car will run more miles, it will depreciate more slowly and it will cost less to maintain than any car built heretofore.*

Stiffer frames, stronger body construction and better paint work and upholstery are developments of the past year that will give longer life to the 1923 cars. Engines will be freer from vibration and the stiffer crankshafts and crankcases will mean less distortion and wear. Better lubrication and greater uniformity in the production of parts are other improvements that will contribute to greater durability in the 1923 cars.

Stiffer frames are a factor in making the 1923 car more durable. Any distortion in the frame is transmitted to the body. Such strains weaken the body, interfere with the opening of the doors and cause rattles and squeaks. By making frames stronger and stiffer, flexing and weaving of the frame members is reduced. To illustrate the value of a stiff frame, one of the new cars had its right front wheel lifted about a foot, the other three remaining on the level. Under these unusual conditions, all four doors opened readily. This shows how a stiff frame relieves the body of strains.

The frames used on the new Peerless models are of rigid design. The side members are straight and have a maximum depth of 7½ in. Tubular cross members, front and rear, are pressed into the frame to prevent twist. In addition, there is a radiator and engine front support cross member, a cross member which takes the brake rocker shaft and the front end of the torque arm, and a rear cross member for the front gasoline tank support. This frame, due to the added cross members, is stiffer and lighter than the frame used on previous Peerless models. By placing the springs directly under the frame side members, they are relieved of twisting strains from this cause.

The channel side members on the new Chevrolet Superior models are of heavier section and the cross bracing is stronger, both of which changes give the frame increased stiffness. Mercer is using about the same side members on the new six cylinder model as on the four, but there is a new and rigid cross member to support the front end of the engine, and a wider and stiffer cross member above the gasoline tank. The central cross member has wider flanges.

Stiffer Frames

The new Barley Six has an unusually stiff frame for a car of its size. The side rails are 8 in. deep with 2-in flanges, made of ⅛ in. stock. Internal gussets are employed for anchoring the cross members and there is a box section cross member against which the side rails are drawn up by a through bolt. The Buick Six frame has been stiffened considerably by increasing the thickness of the material used in the side members from $\frac{3}{32}$ to $\frac{1}{8}$ in.

Parallelling the trend toward stiffer frames is one toward stronger bodies. The new Dodge Brothers all steel coupes and sedans are good examples of this development. Buick has made numerous changes in the construction of the phaeton body for the four-cylinder chassis. These changes add to the strength and ruggedness of this body. The front pillar brace irons are heavier, as are the rear tonneau brace irons. The windshield bracket and top seat rail have also been made heavier. Ten body bolts are used to tie the body to the chassis instead of eight as formerly. The new closed bodies are also more rigid. Heavier gage metal is being used in the construction of bodies and fenders for the new Chevrolet Superior models.

Barley bodies are substantially braced with structural iron forgings. The new Oakland bodies by Fisher have heavier and wider fenders than did the former models, and are generally stronger.

More Rigid Bodies

Bodies that are protected from excessive distortion by stiff frames, and that are made rigid and strong to resist any strains will, of course, have better wearing qualities. Such bodies will not get out of alignment, thus interfering with the opening and closing of doors. They will not develop rattles and squeaks to the extent that less rigid bodies would. They will retain their appearance better, too.

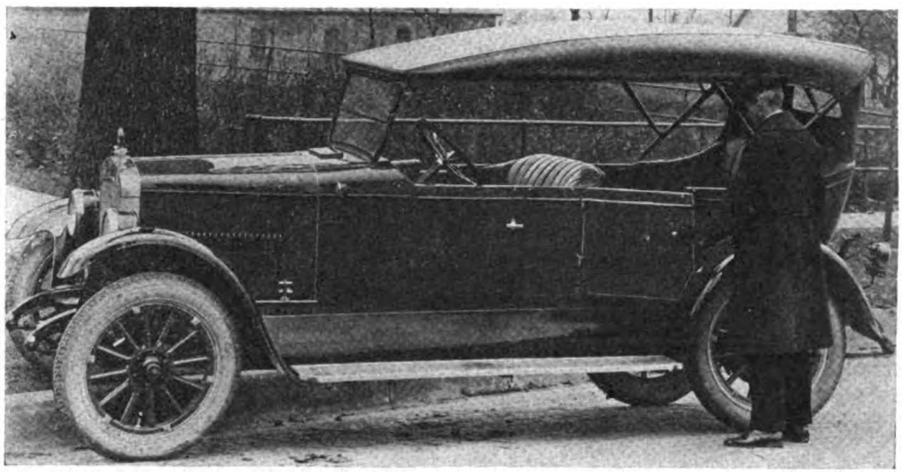
Paint and upholstery on the new cars are more durable. The factories are putting in artificial drying systems that give complete control of the temperature and humidity of the atmosphere in which the paint on the bodies dries. This gives greater uniformity of elasticity and strength to the various coats of paint. Such uniformity in the painting means increased freedom from checking.

Reductions in leather prices have per-

Digitized by Google

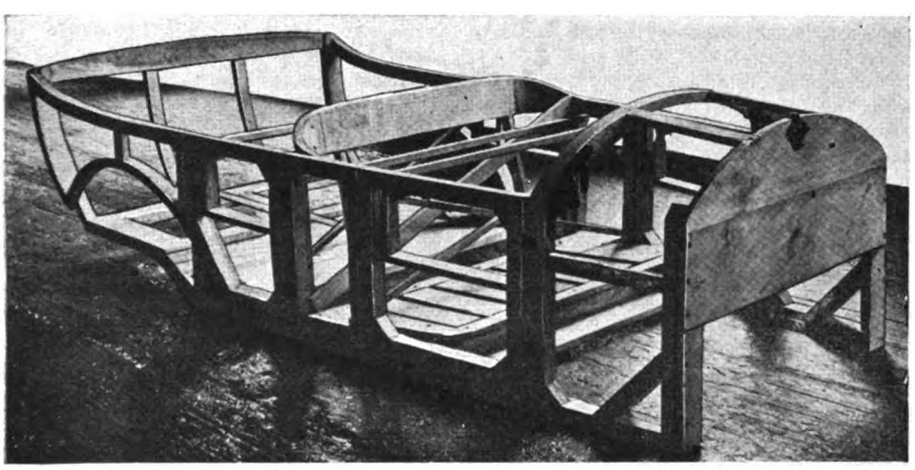
mitted the more general use of genuine leather in the upholstery.

Practically all of the changes that have been made in the cars mechanically have been made primarily to secure better wearing qualities. A great deal has been done to reduce vibration, as it causes failure of parts from fatigue and also increases wear. Reciprocating parts have been lightened, some makers are using longer connecting rods, and rotating and reciprocating parts are being more carefully balanced.



Balanced Crankshafts

Many makers are putting the crankshafts for their engines in dynamic balance. This work is now being done on a production basis whereas formerly it was more or less of a laboratory operation. This is a most important step forward. It adds considerably to the manufacturing expense but it shows that the factories are committed to a policy of making practical improvements. This dynamic balancing operation is performed on a balancing machine. Ansted, Continental, Essex, Hudson, Lycoming and Packard are among the makers to adopt this practice. Rickenbacker is balancing the flywheel and clutch dynamically as well as the crankshaft.

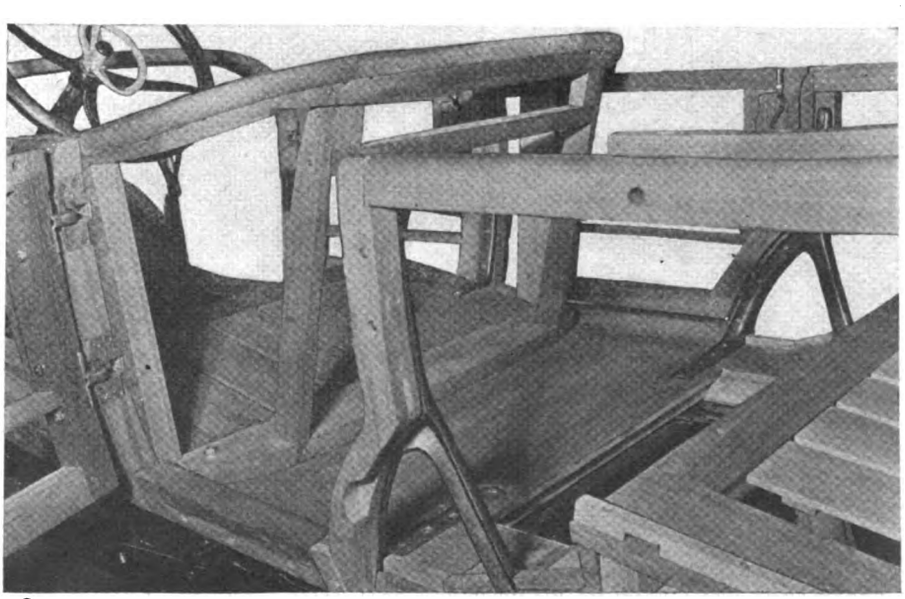


Reciprocating parts are being made lighter in the general effort to reduce vibration. Aluminum pistons are more popular than ever before. Franklin is using a forged duralumin connecting rod that weighs just a little more than half the steel rod used formerly. Longer connecting rods, such as those in the new Lycoming, Stutz and Buick engines, are also factors in reducing vibration.

Some of the factories are making selective assemblies to secure better balance. Connecting rods and pistons are weighed and those accepted are divided into three classes by weights. In assembly light rods are placed with heavy pistons, and vice versa.

Vibration is caused by unbalanced forces which are produced in the operation of the engine. Most people consider vibration simply as something that interferes with comfortable riding. It is well to understand that these unbalanced forces are harmful mechanically. Unbalanced forces resulting from an imperfectly balanced crankshaft tend to distort this part, thus placing added loads on the main bearings and perhaps setting up slight misalignments which are likely to increase wear.

Stiffer body structures are another feature of the 1923 model. The framework of the Anderson phaeton body used on this aluminum six is shown above



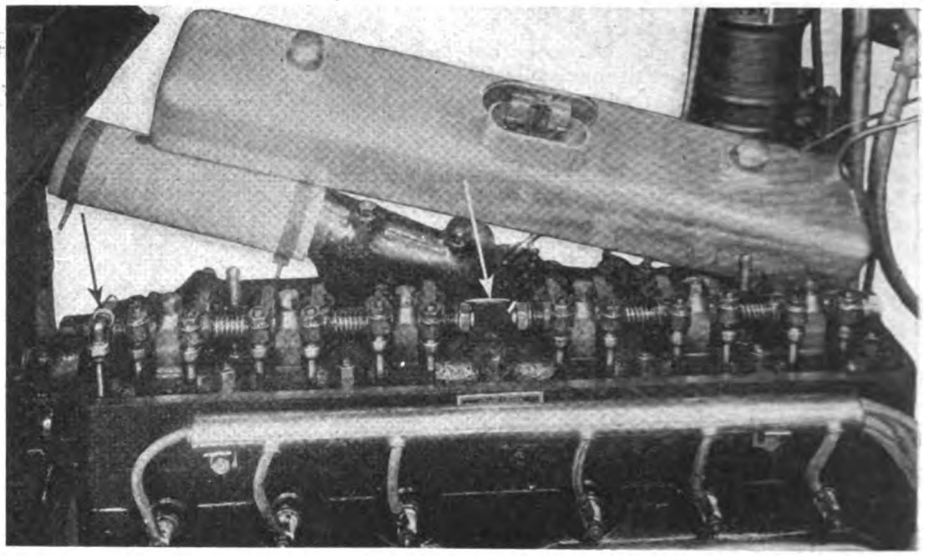
The picture shows the sturdy framework of the phaeton body used on the Anderson Aluminum Six

Crankshafts and crankcases are also being made stiffer. Both of these developments tend to reduce the wear and strain on the parts. A crankshaft that flexes very slightly puts strains both on the bearings and on the crankcase. Bearing wear is reduced with a rigid crankshaft. A stiff crankcase is better able to withstand the strains transmitted to it by the frame and also provides a better support for the crankshaft.

Stiffer Crankshafts

The crankshaft in the Falls engine built for the Dort Six is a three-bearing type of substantial dimensions. The Buick Six crankshaft has been enlarged, the diameter now being 2¼ in. Maxwell has changed from a two-bearing to a three-bearing type of crankshaft, the center bearing being 2¼ in. and the end bearings 1⅞ in. in diameter. This is an unusually heavy shaft for an engine of this size. Lycoming has a five-bearing shaft in an unusually stiff crankcase.

Buick bodies are strong. Note the steel bracing supporting the wood members



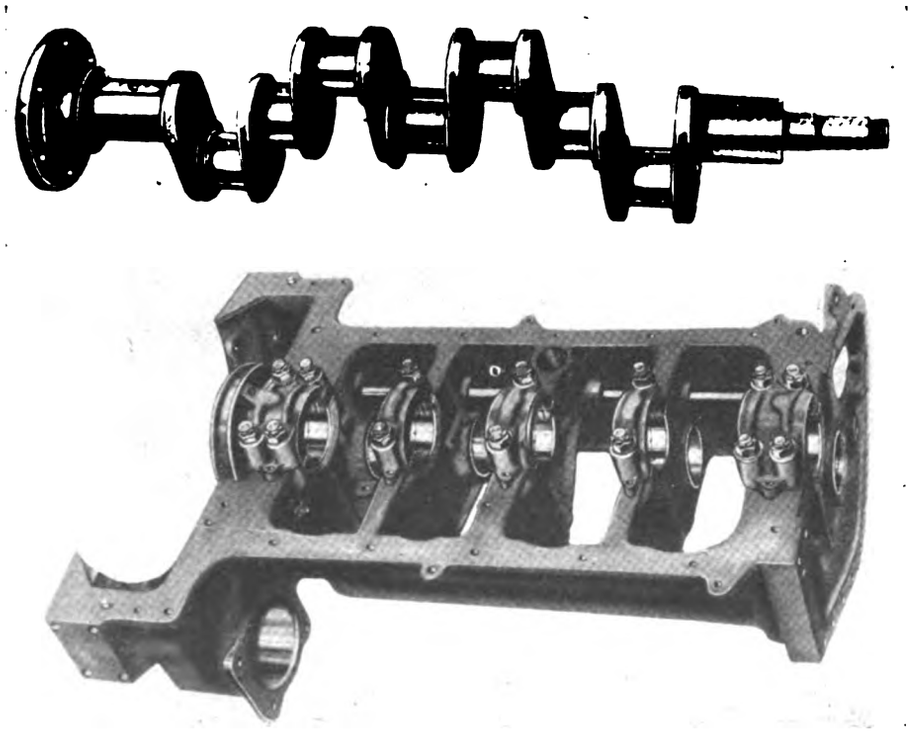
Digitized by Google

A stiff crankcase is better able to resist distortion from the frame and to absorb the forces from the moving parts. Crankcase distortion tends to destroy the bearings, cause bind and wear, and may even result in crankshaft distortion. The Oakland crankcase has been stiffened by the addition of several webs and by the strengthening of others. The Oldsmobile Light Eight crankcase is a strong box structure. Hupmobile and Liberty are examples of crankcases that are stiffened by having the block cast integral with the upper half of the crankcase. The Jordan-Continental crankcase is split below the center line of the main bearings. In addition to providing a stiffer crankcase, this construction gives a more rigid support for the main bearings and for the gearset housing. The crankcase on the Stutz is estimated to be 50 per cent stiffer than formerly.

Reducing Cylinder Wear

Several makers are using longer pistons than formerly. This means that the side pressures on the cylinder walls are distributed over greater areas. The reduced pressure intensities cause reduced wall wear. The Buick and Franklin pistons are examples of this trend. Longer connecting rods produce similar results, but by reason of decreased angularity of the connecting rod.

Finishing the cylinder barrels by honing is a new manufacturing process that it is believed will give better wear resisting qualities. Oakland and Buick are both using this process. The tool used for this purpose is somewhat similar to an inserted blade reamer except that carborundum stones are used in place of blades. These stones grind the walls to a very fine finish.



Oil is supplied under pressure to the overhead valve mechanism on the Falls engine used in the Dort. The arrow at the left points to the duct leading to the hollow rockershaft. The rockershaft is in two sections connected by a short length of tubing indicated by the arrow in the center. The aluminum valve cover has a filler opening in it and all oil used by the engine is supplied at this point

Lubrication is a most important factor affecting the life of any machine. Whenever two moving surfaces are in contact, there is wear. This wear can be materially reduced or practically eliminated, in some cases, by proper lubrication. Practically all engine makers supply oil under pressure to the main bearings, and there are many that use the hollow crankshaft system whereby the crankpins are supplied with oil under pressure. Maxwell and Lycoming are two makers to adopt the latter design, and Velie goes a step farther and carries the oil under pressure up to the piston pin by means of oil ducts on the connecting rods. The Falls engine as applied to the Dort six has the oil pressure dependent on the throttle opening. With this scheme, the wider the throttle opening or, in other words, the heavier the load, the higher the oil pressure.

In the Buick felt has been placed around the valve stems inside the springs to carry oil for the stems and guides. The felt acts as a storage reservoir for the oil, and consequently these parts are more certain to be lubricated. More positive lubrication for the front camshaft bearing in this engine is provided by an oil well at this point.

In the Stutz engine, the oil is distributed through integrally cast tubes, thus avoiding the necessity for exposed unions, tubing and soldered joints. The camshaft bearings in this engine are pressure lubricated. The cooling fan incorporates a centrifugal feed oiling system, which carries a supply of lubricant sufficient for a season's operation.

Crankshafts and crankcases are generally more rigid. The two pictures illustrate this trend. The upper one shows the five bearing crankshaft used in the new Lycoming engine. The lower picture shows the well webbed crankcase used in the same engine

Improved Oiling Systems

The engine used in the new Dort six has a built-in pressure feed oiling system which feeds the overhead valve mechanism. Oil is led under pressure through the rocker shaft, then through drilled passages through the rocker arm to the tops of the push rods. The top of the push rod ends in a cup in which the ball end of the rocker arm operates. Oil flowing under pressure from the rocker arm shaft through the drilled rocker arm comes out through a hole in the ball and into this cup. This keeps the cup and ball continually lubricated and provides a liberal film to cushion the shock. A lead is passed down through the push rod to the tappet so that the cam contact is also lubricated.

Digitized by Google

Lubricating oil for this engine is poured through an opening in the overhead valve cover.

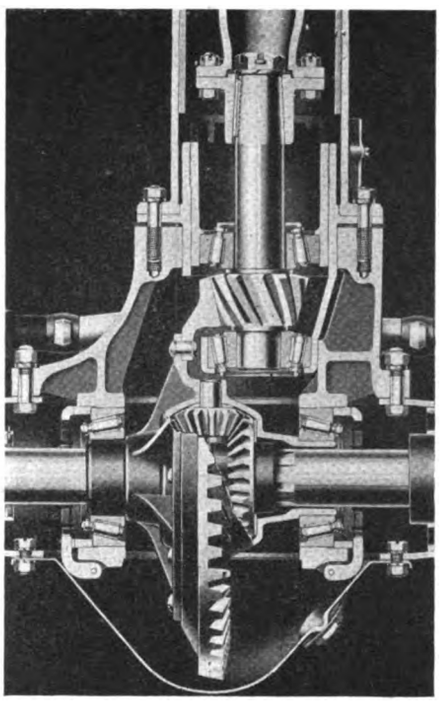
The new six-cylinder Midwest engine for passenger car use has a lubrication system that proportions the oil pressure to the load on the engine rather than to the engine speed. This is operated by the vacuum in the intake which is highest when the engine is running under a light load with the throttle nearly closed and lowest when the engine is pulling a heavy load with the throttle well open.

The forward universal joint is a difficult part to lubricate. For this reason owners frequently neglect it, and this neglect results in rapid wear. Buick and Gray make this universal a part of the gearset and lubricate it automatically from this point.

A step farther in automatic lubrication of adjacent parts is found in the Overland four and the Gray, in which the gearset receives its lubrication from the crankcase oil which is thrown up by the flywheel over a dam and maintained at the dam level in the gear case. Maintaining the oil at correct level in the engine, therefore, assures that the gearcase will at all times have the proper quantity of lubricant.

Anti-Friction Bearings

Maxwell has replaced the plain bearing at the rear of the transmission with a double row annular ball bearing. This change is typical of the trend toward the more general use of anti-friction bearings which wear longer and are easier to replace than the plain type.



A more rigid construction is obtained at the pinion shaft by supporting it in roller bearings located on both sides of the pinion. This mounting is known as the straddle mounting. It is not a new construction, but it is gaining in favor every year. It is a construction that gives more positive alignment with consequent reductions in wear and noise. Peerless is one of the makers to adopt this construction in its new models.

The radiator is not a particularly strong structure, and it must be protected from strain. Buick has reinforced its radiator shell on the inside, and the radiator core support angles have been increased in thickness and the bolts made larger. The radiator on the Barley six is supported on two ball plates which find their own seats.

On the new Buick clutch, the housing is drop-forged of steel instead of malleable iron. The splines are now case hardened and ground, and the clutch plates are fitted to closer limits on the splines and pins. This will decrease wear and obviate rattles. Nash has also changed its clutch, particularly in the clutch shaft. This is a splined type, but is now ground on all sides.

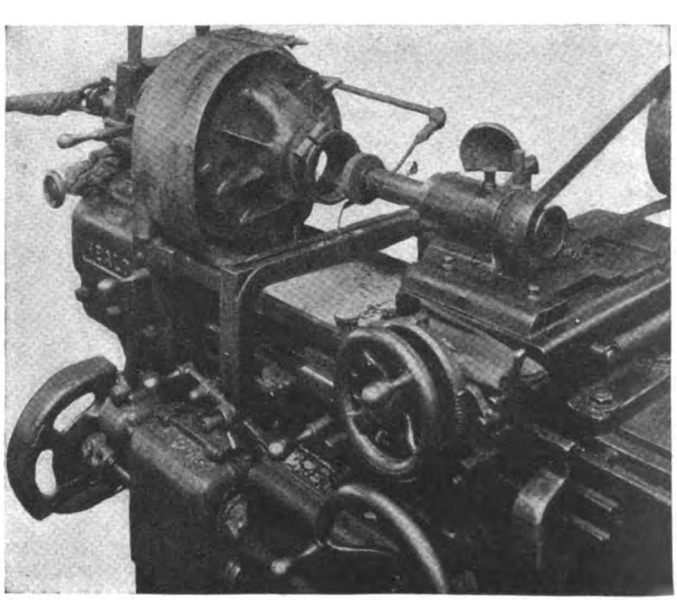
Rigid Inspection

Increased accuracy at the factory has done much to increase the life of the 1923 car. Improvements in methods, machinery and inspection have all combined to give greater accuracy. This means that the rate of wear is very much less than would be the case with less accurately made and fitted parts.

The practice of mounting the pinionshaft in bearings on either side of the pinion is becoming more general. It gives a more rigid construction. The picture is a sectional view of the LaFayette axle

The inspection of incoming material is more rigid than ever before. Many companies, particularly spring and axle makers, are laying down both physical and chemical specifications which raw materials must meet. These companies maintain laboratories to see that materials come up to the mark. Studebaker, for instance, puts a Brinell test on every individual spring leaf. The hardness test of materials is becoming more common, and temperatures in heat treatment ovens are being held to more narrow limits.

In the foundry, too, greater uniformity is being obtained in castings. Improvements in foundry methods have resulted in a better grade of castings than were possible some years ago. More uniform castings mean greater accuracy in the machine shop. In the case of the cylinder block, it means better piston fits.



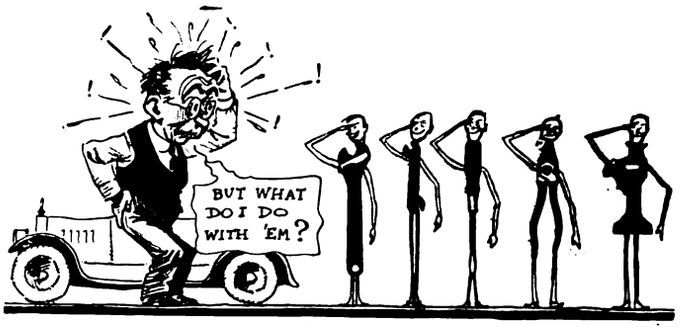
Often a good bearing is destroyed because of poor alignment or inaccuracy in the mounting. Even a slight misalignment in the supporting members for the gears and bearings in the rear axle is sufficient to cause rapid wear in this part. Very careful grinding operations are used to finish these carriers in the most up-to-date shops. In place of the reaming operation formerly employed at the Hudson and Essex plants, the bore for the pinion bearing case is internally ground. This operation is typical of many others that are giving greater accuracy with consequent improvement in the wearing qualities of the finished car.

Rust and corrosion have been guarded against in the past mainly by coating easily rustable materials such as iron and steel with good paints and enamels, and by the use of brass, bronze, aluminum and other materials that are not affected by the action of water or air. Nickel-plating and galvanizing have also been used for this purpose.

Non-Corrosive Steel

Several non-corrosive alloys of steel have been developed, which will be used in the 1923 automobile for the first time. Stainless steel is not a new product, but about the first use of this material in an automobile is believed to be in the Mercer six, in which the pumpshaft is made of this material. Steel has always been used as a pumpshaft material, although Tobin bronze has been tried. The fact that bronze and brass are usually next to the steel causes electrolysis in addition to the ordinary rusting.

Another point in the car where destruction of the steel goes on at a very rapid rate is in the valves, which are subjected to great heat and have little or no means of becoming cool between explosions. Scaling and burning is quite common, especially where engines are used continuously under heavy load. Special alloys of steel have been developed which have alleviated this trouble.



Slight inaccuracies in manufacture or assembly are sufficient to cause rapid wear. The illustration shows the bore for the pinion bearing case being internally ground. This operation on the Hudson axle was formerly performed with a reamer. The present method is being used because of its greater accuracy, which means less wear and longer life

Digitized by Google

THE AVERAGE MAN AND HIS CAR

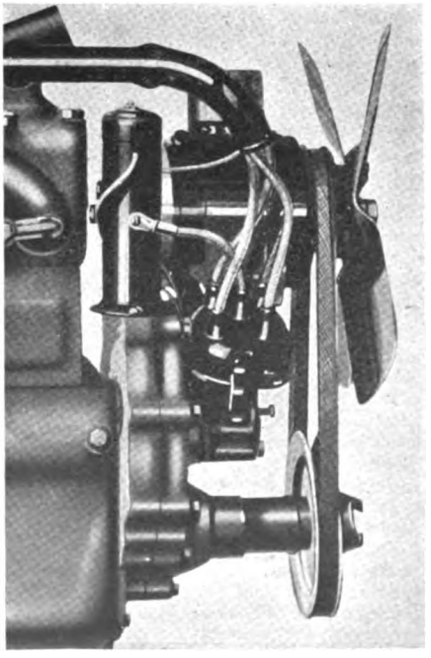
BECAUSE Mr. Motorist, take him by and large, doesn't know anything about machinery, the ingenuity of automobile builders has been quite generally devoted for several years to developing self-maintenance features and to simplifying the adjustment or repair of mechanism neglected by the driver. The 1923 car shows a high degree of accomplishment along this line. This story suggests some of the principal lines to follow in a study of this kind applied to your car.

It Costs Less to Maintain the 1923 Car

Better Materials and More Carefully Fitted and Accessible Parts Boon to the Owner

WHEN the automobile was young, the car buyer was making his first investment in a self-propelled vehicle. The first cost was the only thing he considered, because it was the only cost that was brought to his attention.

To-day the great majority of car buyers have owned one or more cars. Many of them have owned a half dozen. These buyers know that there is a good deal more to consider in the buying of a car than the first cost. Some buyers have been bitterly disappointed because they have either purchased cars that were not at all fitted to perform the required work, or because they expected $5,000 performance from a $500 car. Others who have made a happy choice and have used intelligence in operating and taking care of their vehicles have little or nothing to complain of in the matter of service charges.



Many of the refinements found in the 1923 cars will be found there for the purpose of simplifying maintenance operations and for cutting down the cost of upkeep.

Accessibility Improved

The reduction of maintenance charges has been brought about in three ways. First, the materials of which the car is constructed are correct as to quality and size. Second, simple adjustment points and lubrication points that the owner has to take care of have been made accessible, so that they will be more likely to get attention at regular intervals. Third, such units or parts of units as have to be taken out at intervals to clean, adjust, lubricate or repair have been designed into the car so that there is a minimum amount of time and trouble getting them out and putting them back.

In addition to these three features, it can be pointed out that repair methods in general have been so improved that it costs less than formerly from the standpoint of labor charges to perform such service operations as may become necessary from time to time due to accident, neglect or natural wear. Service has become more of a business. It is better organized and standardized so that the service employer knows how long it takes to perform certain operations. Special tools and equipment mean more time saved. Speed wrenches, mechanical valve grinders, engine stands, hoists, pullers, washing tanks and special tools of all kinds make a great saving in mechanics' time which is passed on to the owner in decreased repair bills.

The flat rate method of estimating repair work in connection with the piecework method of paying service station employees in some shops has not only made it entirely practicable for the shop to estimate in advance exactly what the job will cost, but it has brought about a very definite idea of the time required to perform various operations. As a result in many cases the cost of service to the owner has been more than cut in half, while the shops continue to make the reasonable profit they are entitled to and the mechanics earn more than they did before.

The electrical units of the Maxwell are mounted in front giving a neat accessible layout and a clean engine appearance. This position also keeps the coil cool

A previous objection to car ownership that does not exist this year is high prices of repair parts. Due to the decreased cost of raw materials, reductions in labor costs and the use of improved production and distribution methods, it has been possible to reduce the cost of parts for repairs very materially, in some cases more than 50 per cent.

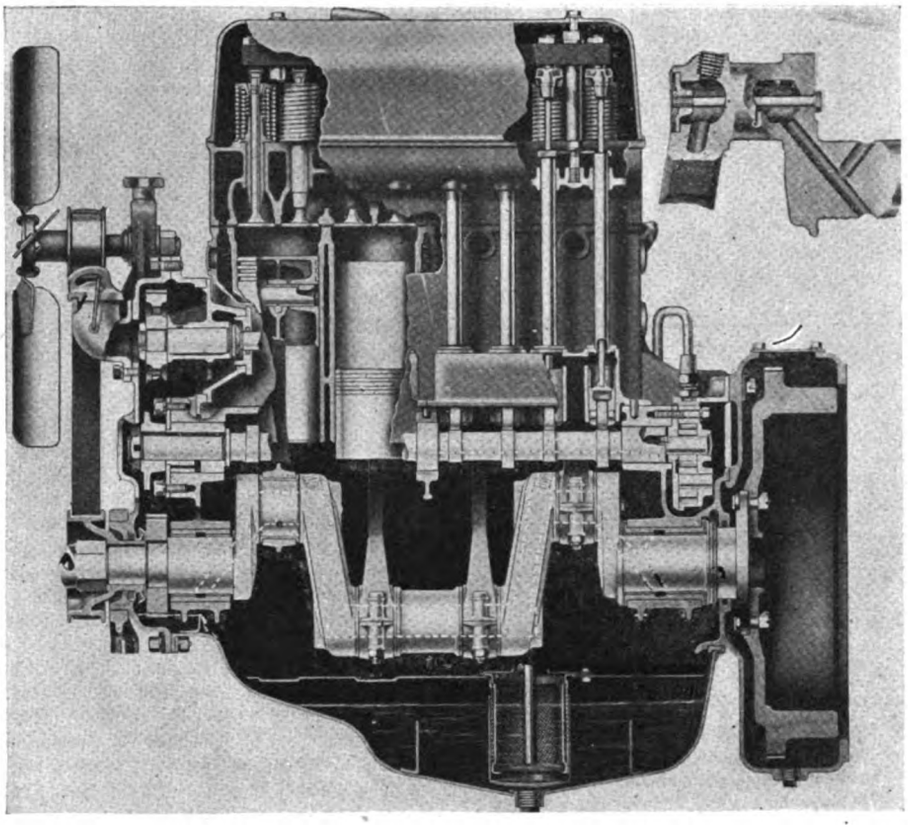
Owner Neglect

Among the most important features in connection with service costs is the care the owner gives the car. Probably 60 to 80 per cent of the service on a car is necessary by reason of owner neglect. It is the function of the instruction book to so explain the mechanism of the car that the owner will get a clear idea of the attention he should give it. Lubrication is one of the points that is the most neglected on the average car and the cause of much wear and consequent expense. The instruction book of to-day has gone far in making plain to the owner the parts that require lubrication, how often they should get it and what kind of lubricant to use.

Many manufacturers have realized that service on cars could be much improved and costs cut by pooling all service information, and accordingly, service manuals, sheets, diagrams and outlines of service methods have been published for distribution to car dealers and shops, with the result that mechanics are now able to perform service jobs with more real information at hand than they have ever had before.

The realization that service plays an

Digitized by Google



important part in the selling of the car and of keeping it sold has led to a much greater consideration of the service problem by the designer. Detachable cylinder heads are seen on a constantly increasing number of cars. The Buick four uses this design to bring about easier access to the combustion chamber. Valve cages are eliminated, the valves seating directly in the cylinder head.

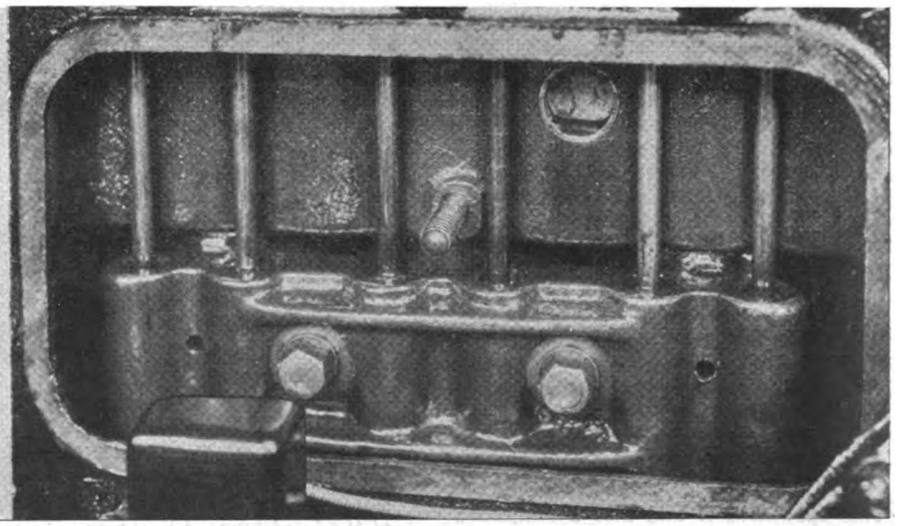
The Continental 6Y engine has a detachable cylinder head fitted with extended lugs so that the head can be removed without the necessity of driving a screwdriver or chisel into the gasket. Another car provides eyes for a tackle hook.

Replacing Bearings

The refitting of bearings has always been an item of considerable expense because of the necessity of hand scraping. One design that shortens a bearing replacement job is seen in the Oakland. When the bearings are worn out, an entire new set of bearings is simply put in by dropping the bushings in place. This operation has been made possible by holding down the size on the machined parts of the crankcase to very close limits and adopting the same care to the bronze backs and bearing surfaces of the bushings. In this way interchangeability is secured. The new Midwest six cylinder engine also has bearings of this type. With a bearing construction of this kind, it is unnecessary to scrape bearings to a fit or to line ream them.

Many manufacturers use a somewhat similar method in fitting connecting rod bearings, excepting that the babbitt is cast into the connecting rod directly instead of being placed in a bronze back. The babbitt bearings in both the upper and lower holes are machined exactly to size, the holes tested for parallelism and stocks of these rods shipped to dealers and agents. It is then a perfectly simple matter to slip out the worn or burned out rods and insert the new ones, the worn rods being sent back to the factory for rebabbitting.

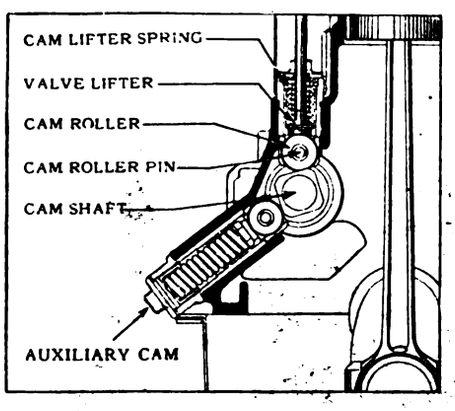
All oil entering the pump of the Midwest four cylinder engine is screened and the pressure lubrication system is entirely carried in the upper half of the crankcase so that the lower half can be removed easily



On the new Buick models bearing life is greatly increased by making the babbitt harder. In some places around other engines and moving parts, it has been found practicable to use a steel shaft in a cast iron bearing under certain conditions with a considerable increase of life to the bearing and the shaft as well.

Another feature of accessibility is the change of design of the valve tappets and guides so that they can be replaced without taking the engine out of the car and tearing it down. The Oldsmobile eight, Rickenbacker, Mitchell, Hupmobile and Falls engines are examples of a design of this kind. In these engines blocks of two or more tappets and guides can be taken out from the outside of the engine by simply taking off nuts or cap screws, after which the replacement is easily made.

Another construction feature found in a number of cars affords easy removal of the camshaft. On the Gray car the camshaft is carried in three bronze bushings which step down in size from 1 7/16 in. so that the entire camshaft can be drawn out through the front end of the engine.



Oakland replaceable bearings simplify repair work and reduce service costs

Tappet guide blocks permit the removal of six tappet guides as a unit on the Falls engine used in the Dort and other cars. Other designs permit the removal of two or four

Digitized by Google

A recurring feature of service cost in any car is the removal of accumulated carbon, which is generally accompanied by grinding the valves as they are usually affected by carbon in the combustion chamber. Several different methods of slowing up the formation of carbon are being used. In the new Stutz the formation of carbon is greatly retarded by machining the entire inside of the combustion chamber. Packard, Hudson, Lincoln, Lafayette, Rickenbacker and a number of others use this same method of retarding carbon formation.

Continuous spring tension on the Buick Four camshaft prevents any noise. The extra cam lobe takes up the usual slack point

As carbon in the combustion chamber is largely made up of road dirt, anything which would prevent the road dirt from entering the carbureter would lessen the accumulation of carbon deposit. Franklin has for some time been using an air cleaner and the new Series B Rickenbacker has one fitted as standard equipment. These devices filter the incoming air of dust and dirt.

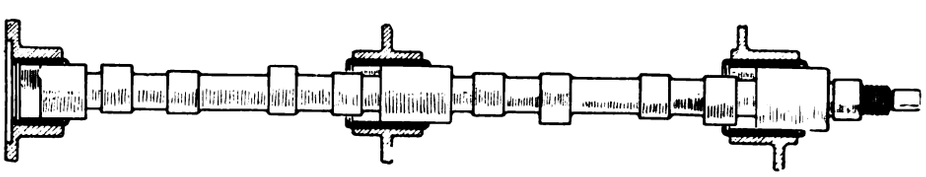
Better Lubrication

Perfect lubrication would mean an end to all service work, excepting that caused by accident or breakage. But there is no such thing as perfect lubrication. Even the finest oil, of exactly the correct viscosity and suppled continuously in sufficient quantities, will not give 100 per cent lubrication, or in other words, remove friction entirely. There is always friction present when one surface moves against another, and this friction increases as the pressure increases and as the speed increases. Engineers have provided lubrication methods that reduce friction to the minimum, provided the lubricant, either oil or grease, is supplied at regular intervals. As soon as the supply of lubricant stops, the friction increases several hundred or several thousand per cent and erosion or rapid wearing away of metals begins. Better lubrication, therefore, means that the service cost is decreased because the parts will not wear out so soon. Better lubrication means both a continuous supply of lubricant to the parts that need it and also a simplified method of replacement so that the car will need a minimum of attention on the part of the owner.

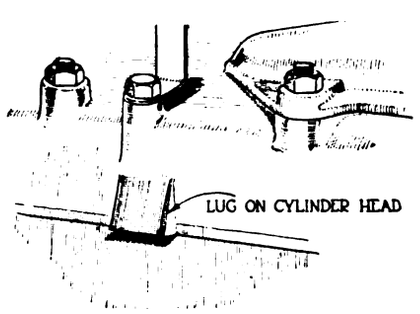
A point that has heretofore been difficult to lubricate is the piston pin. A constant supply of oil to this point is now supplied by pressure on the Maxwell and Lycoming engines, and the Velie uses an oil duct on the connecting rod.

The pressure system of engine lubrication has made great gains in the past few years and is now used on the great majority of cars for 1923. Several different adaptations of this design are used, but the hollow crankshaft predominates.

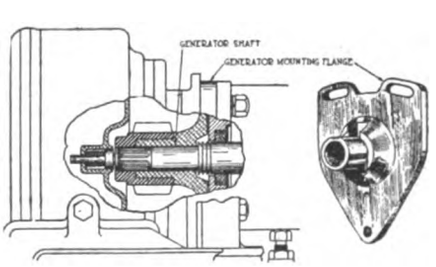
While it is extremely important to get a copious supply of oil to rubbing surfaces, it is equally important to keep the oil where it belongs and one place it does not belong is in the combustion chamber. The very nice problem of allowing ample lubrication of the cylinder walls, yet keeping the oil down out of the chamber, has been worked out by careful cylinder finish, accuracy of machine work and assembling and by giving a great deal of attention to the design and fitting of the piston rings. While it cannot be said that the solution of this problem has been found, yet, with the development of constant clearance piston types, better piston rings and better methods of assembly, a great deal of the difficulty encountered on the older engines has been overcome, and one manufacturer is so sure that he has a real solution that he is giving a written guarantee of 15,000 miles against oil pumping by his engine.



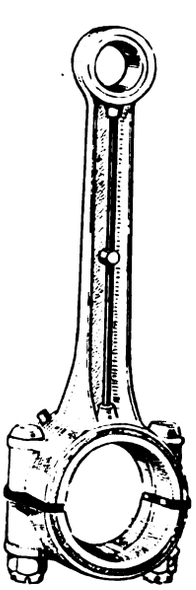
Another point in connection with lubrication from the service standpoint is the facility with which periodic attention can be given to certain units and the ease with which the system can be repaired, adjusted and cleaned.



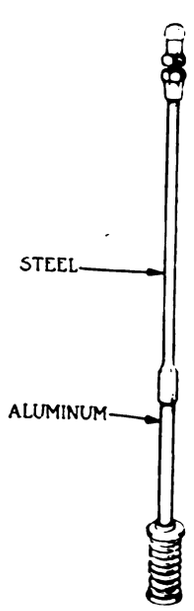
Due to the fact that gasolines are particularly difficult to vaporize, notwithstanding the very creditable vaporizing and super-vaporizing devices, there is a certain amount of raw or unvaporized fuel which finds its way down past the piston rings and into the sump. Eventually this dilutes the lubricating oil to a point where it no longer has sufficient viscosity to form a lubricating film in the bearings and between the cylinder walls and pistons. It is necessary, in view of this condition, that the oil be drained from the crankcase approximately every 500 miles in winter and every 700 miles in summer. This means that the average car will have to be drained approximately every three weeks in cold weather and every four weeks in warm weather. Several cars have made provision for easily draining the oil without the necessity of crawling underneath the car.



Accessible Oil Screens



Oil screens and filters show a tendency to be much more accessible. The Lycoming engine is so designed that when the engine pan is dropped the entire pump



Features That Have Decreased Service Costs

At the top is the Gray camshaft which, like many others, has the bearings of decreasing size, the smallest at the back so that the camshaft can be withdrawn from the front. At the left center is shown the lug on the cylinder head of the Continental 6Y engine. At the lower left is the Franklin sprocket which drives the generator and is so arranged that it can be removed without disturbing the timing. At the right is shown the Velie method of oiling the piston pin and the Buick bi-metal push rod to insure constant tappet clearance

Digitized by Google

and screen can be easily seen, cleaned or repaired.

Buick and Peerless models also show improvements in this respect. The Franklin and the Mitchell carry the oil tubing outside the crankcase so that in case of obstruction the connections can be easily broken and cleaned out. Other makers have taken the other extreme and cast the tubes right in the crankcase to prevent injury or breakage. The Peerless has a larger oil strainer that has been installed as an independent unit in the lower half of the crankcase. This screen is removable for cleaning without taking down the engine pan. An oil drain plug, operated by a special wrench in the tool kit allows of draining the oil without getting under the car.

In the 1923 car there is a decided effort to eliminate noise. This may sound like an impossible performance, but, nevertheless, many of the new cars have carried out the idea so successfully that it is sometimes impossible to tell whether the engine is running when standing close to the hood. Noise means lost motion somewhere, something rubbing without lubricant or something hitting. Lost motion means a hammering action, and this soon leads to wear. A bearing which knocks and pounds soon pounds its oil out, beats down the babbitt and finally the bearing gives way. Stiffer crankshafts, stiffer crankcases, harder or more carefully designed bearings and a better selection of materials have reduced the liability of knocks and rattles. Overhead valve engines, in spite of their many other advantages, have in the past been rather noisy, especially when they became old and worn. Two features of design at least have been used to reduce this noise, due to unequal expansion. The new Buick has bimetal push rods, one part being made of aluminum and the other of steel. The proportions have been so made that the ratio of expansion is the same as in the

Haynes uses the Whyte Motorcontrol on its 1923 models. This simplifies the removal of the body as no wiring need be disconnected. This location of instruments and switches is also desirable from the convenience standpoint

cylinder block. This assures that the valve tappet clearances will remain the same at all engine temperatures. To insure a supply of oil to the valve stems, the valve springs carry a felt packing. The new Falls engine has some innovations in overhead valve gear design. A positive force feed of oil is carried right through the overhead shaft and rocker arms so that there is a film of oil at all times on all working surfaces. Small cups at the upper ends of the push rods carry a supply of oil to take care of the contact between the push rod and the rocker arm, and also to absorb the click which is usually present at this point.

There is at least one place in a four cylinder engine where there is slight lost turning motion in the camshaft, and under certain conditions this is liable to develop into a decided click or light knock. The Buick four has a development to overcome this. An extra lobe or cam on the camshaft is placed at this ordinarily loose point, and a roller bearing against it takes up the slack just as would the valve tappets with the force of the valve springs behind them.

Electrical mountings are quite simple to maintain. Many cars have made the ignition unit entirely separate from the generator so that the generator can be dismounted without disturbing the timing of the ignition. The hollow sleeve mounting of the generator is another feature that cuts down the labor cost, because the entire operation is controlled by a single set screw. In the front end chain drives the adjustment is either of the automatic type, maintaining a constant chain slack, or else the adjustments are very easily gotten at and easily made. Generator charging rates on the third brush systems are easily changed. On the Ford only two small wrenches are required, and the adjustment can be made in five minutes. Brush replacements on both motor and generator are more simply made, and in the design of the unit and its installation of the engine, this feature has been carefully considered. In the past it was frequently necessary to dismount the unit in order to replace the brushes. There are few units so mounted to-day.

Wiring systems are better laid out and are more substantial, and many of them have been passed by the Underwriters Laboratories as a first class risk. This means that insulation, size of wire and fusing have been very much improved and that in the car of 1923 danger from fire due to short circuits is minimized. Troubles with electrical wiring systems are not common because of the junction blocks, fuses and simplified wiring, consequently, it is seldom necessary to trace out circuits. Instruction book wiring diagrams simplify tracing circuits.

Greater Comfort in the 1923 Cars

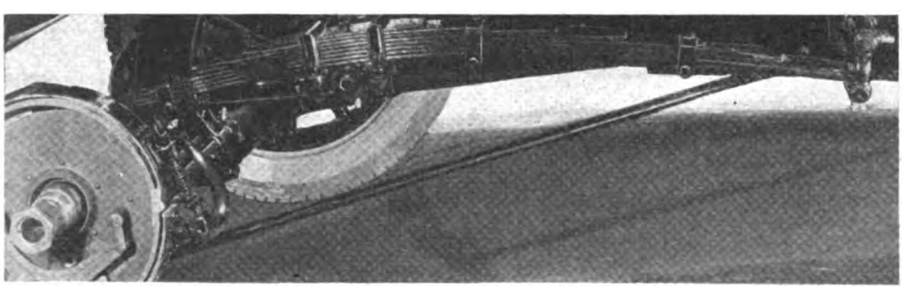
Smoother and Quieter Operation—Detailed Improvements Make Motoring More Pleasant

COMFORT has been given as much attention by automobile designers as any feature of the car. There are two kinds of comfort, mental and physical. Mental comfort is a sense of security or peace of mind on the part of the passengers brought about by the reliability of the automobile. Their faith in the car and its ability to get there and back without mishap has a great deal to do with their enjoyment. The factors back of this reliability are correct design and manufacture and durable materials. Coupled with these primary features of reliability are the indicators and gages which show that the various mechanisms are performing their duties correctly. These gages tell the driver at a glance what is going on and remove the chief obstacle of enjoyable driving —worry.

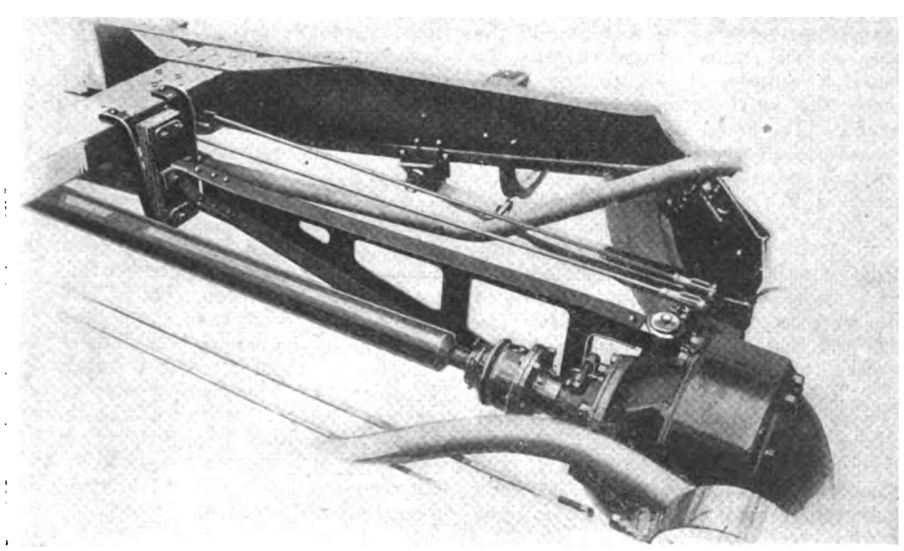
Mental Comfort

The 1923 car can be said to have reached a point where worry is almost removed from the list of things the driver has to do. Every vital mechanism is protected in some way from going wrong by gages, fuses, cut-outs, emergency tanks, etc. Tire trouble, due to the general use of the cord tire, is almost a thing of the past and many cars run tires from 8000 to 20,000 miles without puncture or blowout.

Mental comfort features are generally only realized after the owner has driven the car for some time. They are not usually given the sales attention that they deserve. The man who has never owned a car will not appreciate them at once. The more experienced motorist will generally look for them the first thing.



Physical comfort can be shown in demonstration. A great many factors of design and construction contribute to physical comfort.



Freedom from noise, vibration, squeaks and rattles is of prime importance and the 1923 car can be truthfully said to have reduced these evils to a minimum. The careful balancing of crankshafts and flywheels, together with selective assembles of connecting rods and pistons,

Digitized by Google

has reduced the vibration in the power plant to almost nothing. Many manufacturers are using these methods and the results obtained make the cars of 1923 stand out above all former models. Anti-friction bearings, improved bearing mountings and more care in the design and assembly of the steering mechanism are responsible for a great reduction in vibration through the chassis. Correct bearing arrangement and mounting leads to a reduction in wear and reducing wear

Spring and Torque Arm Changes

At the top is the redesigned spring on the Buick in which the changing of the center member position gives easier riding. At the bottom is shown the new Peerless fabric connection for the torque arm, previously a difficult point to lubricate, now requiring no lubrication

cuts out the rattles. Spring shackles have undergone some improvement both as regards design and what is still more important, lubrication. Gear noise in the engine has been eliminated by using spiral gears, composition gears working against metal, or silent chains.

The most direct contribution to comfort is easy riding. This is secured through springs, tires and cushions, these three absorbing the unevenness of the road. An important factor in easier riding in the greatly increased use of cord tires which do not require such high pressure inflation as do fabric tires. They are therefore able to absorb many of the small unevennesses in the road surface instead of transferring the jolts to the springs, which happens when higher tire pressures are used. A slightly softer tire also makes steering much easier on rippled roads which will cause a highly inflated tire to skid at high speeds.

Little change is noticeable in spring design and construction this year, practice having proved the worth of present designs. There is, however a decided tendency toward the fitment of rebound plates or shock absorbers as standard equipment, the practice being quite general among the sport models.

Cushions play a very important part in comfort and while any sort of a cushion may be reasonably comfortable for a short ride, the increase in long distance touring has centered the attention of the body designer on the shape and make-up of the cushions. In the closed cars there is a tendency toward higher seat backs, with spring backed upholstery, giving a maximum of comfort. The general lowering of the height of cars has brought with it a slight reduction in the height of seats, therefore it will be found that seats in general are at a greater angle than before. Attention also has been given by most builders to greater leg room.

A feature that is becoming more prevalent with the straighter side bodies is the ability to lower the glass in the closed models all the way so that the driver's left elbow can rest on the sill. Door sizes are better adapted to easy entrance and exit and the newer two door sedans or four passenger coupes have extra wide doors.

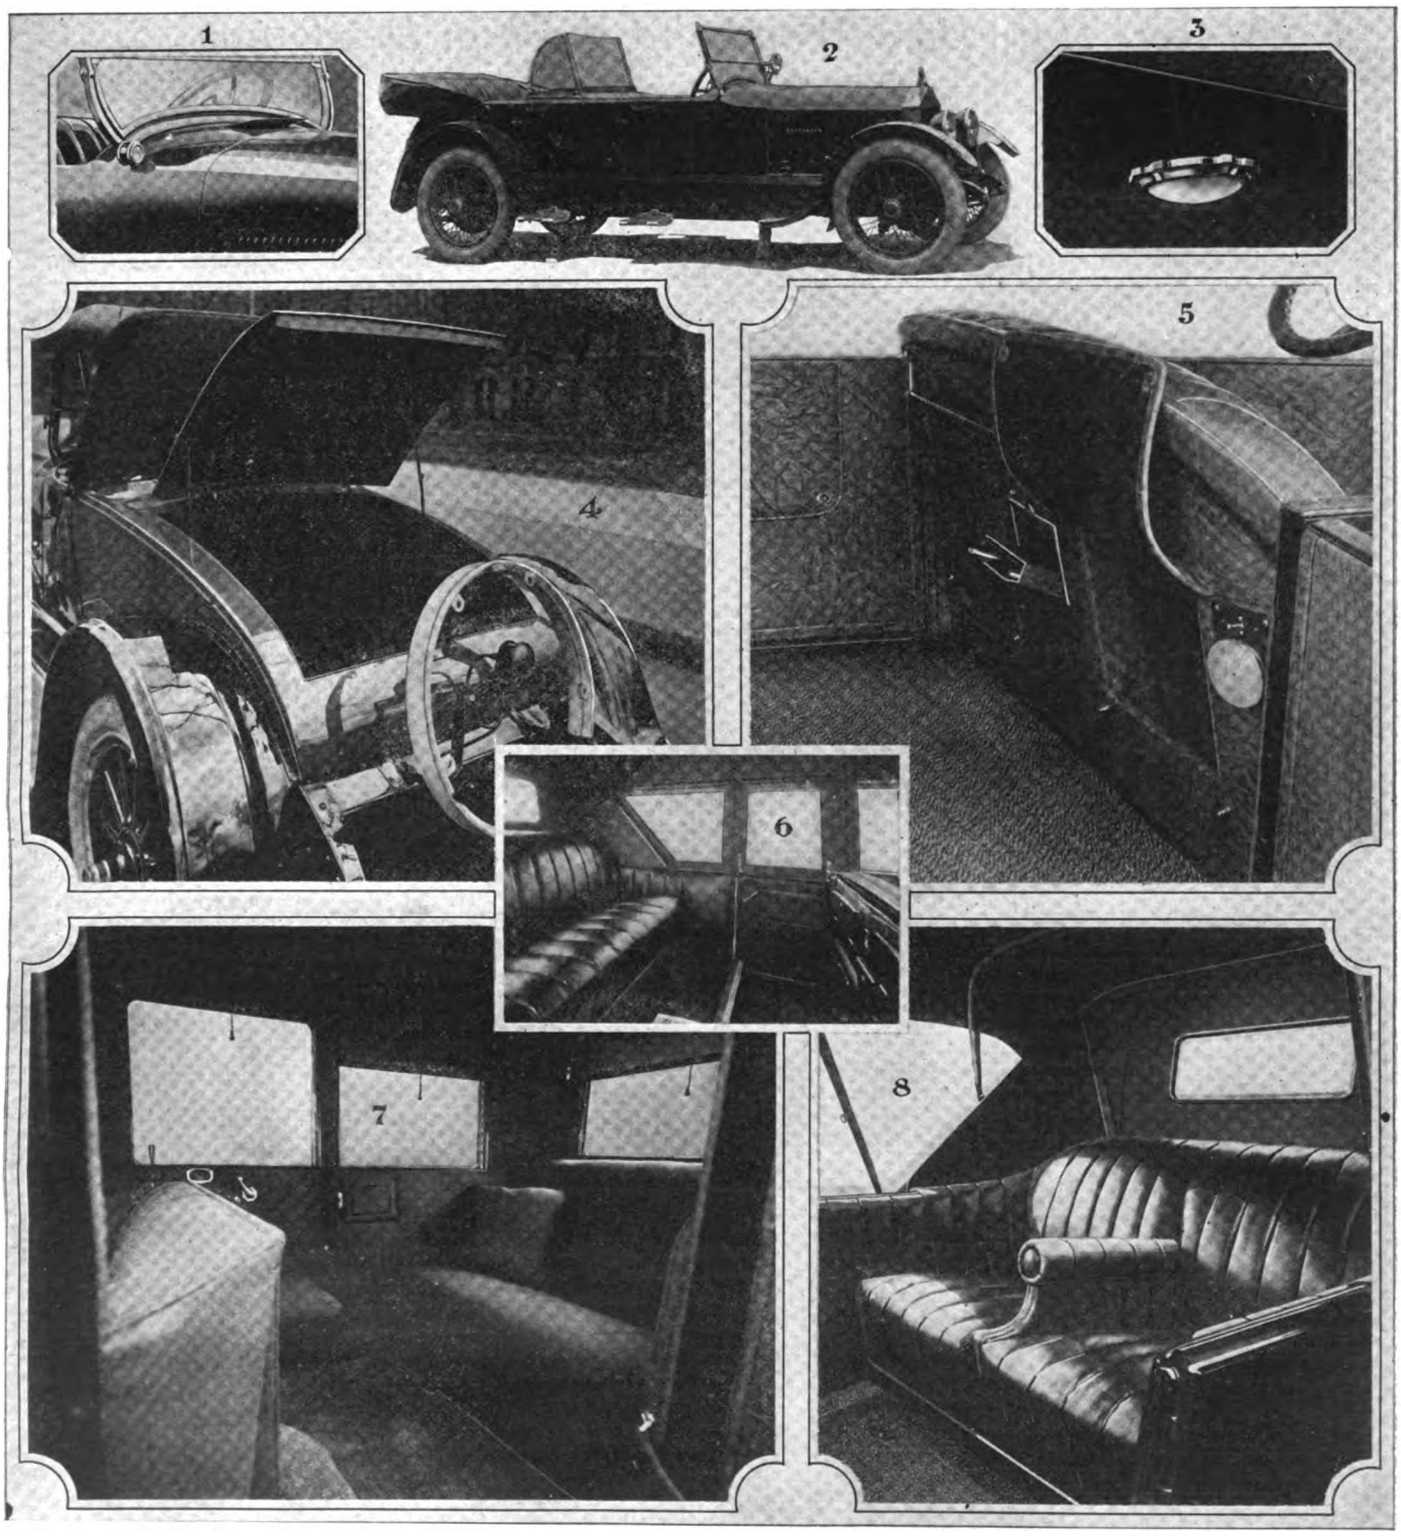
Driver visibility is much improved. Blind spots have been removed or reduced and there is a distinct trend toward rear windows which allow better vision by means of a mirror in front of the driver. Many phaetons and roadsters have adopted plate glass for the rear window, making it large enough to be useful and redesigning the rear curtain to carry the extra load. Better headlamps give driving light at night and non-glare devices assist in preventing accidents and causing annoyance to pedestrians and passing motorists. Windshield wipers of the automatic or hand operated variety are fitted to an increasing number of cars. One of the Pierce-Arrow closed models has two windshield wipers, one on each side of the shield.

Protection against heat, cold, rain and wind has made great advances. Many closed models are regularly fitted with car heaters which take their heat from the spent exhaust gas. Doors have been made close-fitting, and windshields on the closed models are being more tightly fitted not only for protection against cold winds but against rain as well. Rubber gaskets and beads fitting into gutters are used for this purpose and the rubber strip along the joint of the glass keeps a tight joint at this point.

Better Fitting Curtains

On the open cars the curtains are made to fit better. It has been something of a job to make a tight joint between the curtains and the slanting windshield but this has been worked out satisfactorily. Paige has a triangular metal frame with glass and Studebaker uses a triangular strip of curtain for a filler. Better fastenings are used on some other cars. The general use of windshield wings on sport models has greatly added to the comfort of the occupants of both front and rear seats. With windshield wings and better fitting curtains it is now possible on many open cars to fit a car heater and maintain a comfortable temperature although naturally there will be more air leaks than in a closed car.

The California top is being fitted to an increasingly greater number of open models. This furnishes at once closed car comfort with open car advantages and at a price generally somewhere in between the two. Many of these tops have clever means of disposing of the side panels when they are not being used. Some have the panels slide down into the doors and body and others have a hinged arrangement whereby they are folded into a compartment between the doors.



Lever Operated Windows

Practically all door windows on closed models are lever operated. Some makers still use a strap lift on rear quarter windows, but there is a disposition to use either a Pullman window catch or a lever regulator on these too. Several cars have an arm rest in the center of the rear seat. Studebaker uses this type. On some models this is removable so as to allow for the seating of three persons.

With the added conveniences and better design from a comfort standpoint it is now possible to drive cars in the cold, rain and snow of fall and winter and be practically as comfortable as in the spring and summer. The 1923 car is essentially a year round car.

It's Just Fun to Run the Modern Car

Makers Have Done Wonderful Work in Developing Ease of Operation

THERE is a thrill to operating any fine piece of mechanism—an airplane, a well balanced typewriter, the engine of the Twenty Century Limited or a motor car. Perhaps the operation of any of these may fall within the daily duties of the operator and so it might be called work. On the other hand there is a sense of satisfaction or pleasure in the work and the way the machine responds to the controls.

The 1923 car, with its added improvements and refined mechanism, is a pleasure to drive whether that driving be done as part of the daily routine or as recreation.

Car control has three essentials, starting, running and stopping. Coupled with these are visibility from the driver's seat and the knowledge that certain units are performing their functions properly as indicated on gages or dials.

Easy Starting

The 1923 car is greatly improved in all these respects. Cars are started now in the coldest weather with little difficulty. There is better provision for drawing a "firable" mixture into the cylinders.

The running control of the car consists in the ability easily to accelerate the speed, slow down, climb hills, back up and all the other things that a car has to do in the course of a run. The clutch, gearset and steering wheel are the prime factors in the running control and the brakes are to be depended upon for stopping. In addition to these prime factors of control, there must be means by which the driver is kept informed as to the operation of the various units. The oil must circulate, the generator must charge, the cooling system must be operating correctly and the speed of the car and the distance traveled should be observable. All these and other operations are taken care of in the instrument equipment and many of the vital operations are made as nearly automatic as possible so as to leave the driver free of complicated manipulation.

There is no great change in car starting methods within the year. Yet certain details have been refined that permit the driver to step from the curb to his seat and with the very minimum of exertion to start the engine. Principal among these refinements has been the grouping and positioning of switches and controls. No uniform system of placing these controls exists, yet the general lay-out of the mechanical controls has a great deal of effect upon the positioning of the starting controls. The aim has been to effect the operation of starting the car with the least possible number of motions on the part of the driver.

An inseparable part of the starting operation, especially in cold weather, is the choke or primer. The conditions under which the engine starts in cold weather are a good deal more difficult than most people realize, yet designers have been able to overcome these difficulties to such an extent that the average owner really does not know they exist.

Starting is successfully accomplished either by means of a carbureter choke or by a primer which either atomizes the fuel at a point between the carbureter and the combustion chamber or else applies heat from the storage battery to some point in the manifold system thereby vaporizing the liquid fuel and making the firing of the mixture more certain.

Among the 1923 cars using heating primers are Franklin and Lincoln. The Lincoln device is called the "Electrofog." In both cars the storage battery current is used to heat the gasoline to a point where it becomes a permanent gas or fog which is easily combustible when drawn into the combustion chamber and fired in the usual manner.

Some Day Maybe—

A YOUNG fellow will be able to sit back in the tonneau with his girl while his voice controls his car by means of some yet unheard of development of radio. Some day, MAYBE. In the meantime designers have gone so far in work along automatic control lines that the ease of operation of the present-day automobile is one of the wonders of the world. There are a few mechanically inclined owners who like to fuss with controls, but the average buyer of a car wants to have everything done for him but starting, steering and stopping. There is much in the equipment of the 1923 car to talk about in an interview with this average buyer. Are you UP on all these features of your car? Look in this story for hints that may help you make a sale some day.

Engine Temperature Control

Two other mechanical features that assist in reducing the time of the starting period are the use of shutters, either thermostatically or manually controlled, and the use of thermostats in the cooling system to allow for more rapid heating of the engine cylinders. Any one of these three control systems allows the water in the circulation system to get up to a normal operating heat in a very short time as compared with the time it would take were no such method provided.

Not only is the engine of the 1923 car easier to start, but it is also easier to control after it is running. During the past year engine controls have been simplified somewhat although there was no particular difficulty experienced before. Several cars, including Cadillac, Peerless, Reo and Jordan, have eliminated the conventional quadrant on top of the steering wheel. With the universal use of the foot throttle or accelerator with the one exception of the Ford, the use of the hand controls for spark and gas has decreased greatly and there is a tendency therefore to make them a little less conspicuous and to get them out of the way.

Automatic Spark Advance

In flat level country the spark lever is practically not touched after advancing the spark to the proper position following the starting of the engine. In hilly or mountainous country, the spark lever will be brought into action more frequently. Some cars use an automatic spark advance which at all times maintains the spark at the point of greatest engine operating efficiency. This means that instead of retarding the spark from time to time when the engine begins to knock, the car is simply driven at the desired speed and the automatic advance retards the spark when or even before conditions demand it. As soon as the need of a retarded spark has passed, the spark is again advanced to its maximum point. The great advantage of such a piece of mechanism is in the return advancement. When the spark is manually operated, the driver very often forgets

Digitized by Google

to advance it again, with the result that the engine is operated for a long time with retarded spark thus losing power, using more fuel and heating the engine. Many 1923 cars are fitted with an automatic spark advance.

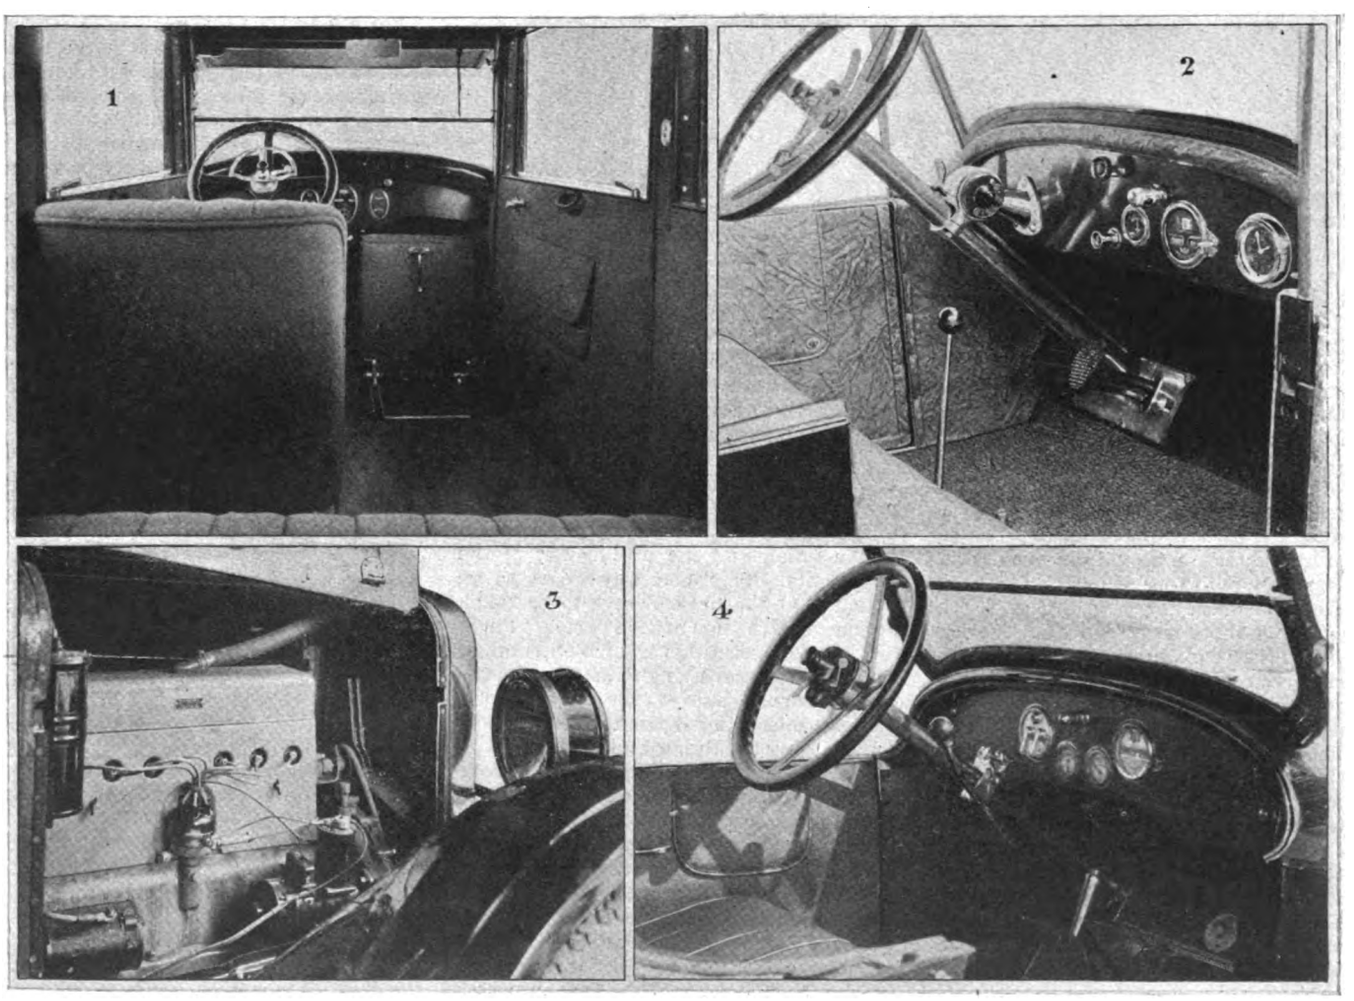
Less Driver Attention

Summing up the ease of control of the engine on the 1923 car, it might be said that attention on the part of the driver is reduced to a minimum. Oil, gasoline, water, spark and so on are all made to perform their functions with practically no attention on the part of the driver.

Aside from the engine controls, which are few in number and simple, the only other control elements in the car are the gearshift, which determines the gear ratio or power ratio between the engine and the rear wheels, the steering gear, the clutch and the brakes.

The clutch has not undergone any radical change in design and the only notable refinement is the rearrangement of some parts and the use of slightly different materials which give an easier engagement. The harsh clutches of some five years ago are not to be compared to the smooth acting units used today.

In general the foot pressure required to release the clutch is not so great as in previous years. This has been brought about either by decreasing the spring pressure, as in the case of the new Peerless, or by increasing the leverage between the throw-out and the pedal. It is more than likely that this gradual change has been brought about by the increase in the number of women drivers. The new Rickenbacker is fitted with a clutch designed to require lighter pedal pressure and yet give more even pressure to the friction surfaces. It is of the disk type.



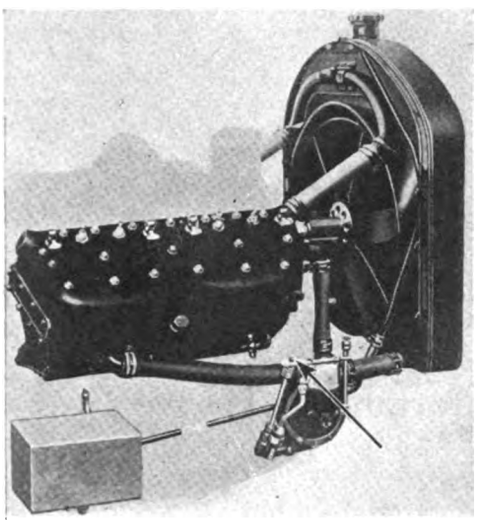
From the standpoint of ease of operation, little change has been made in gearshifts. In several instances slight changes have been made in the curve of the gear shift lever or in the length of the lever to bring it within more convenient reach of the driver. An instance of a change of this kind is seen in the Chevrolet Superior model in which the hand brake lever is placed behind the gearshift lever, thus giving more room in the driving compartment and by a change in the bend of the gear shift lever, it is so placed that the driver's hand does not come in contact with the instrument board.

Few changes are to be noted in the design of steering gears. Chevrolet has changed to a worm and screw type. In general the diameter of steering wheels has increased and 19 in. seems to be a pretty generally accepted size. Many of the steering rims are now corrugated on the inside for easier gripping, especially when the driver is wearing gloves. Some of this corrguating is even carried to the outside of the wheel. Consequently the car can be driven with a very light grip on the rim compared to the grip required on a perfectly smooth rim.

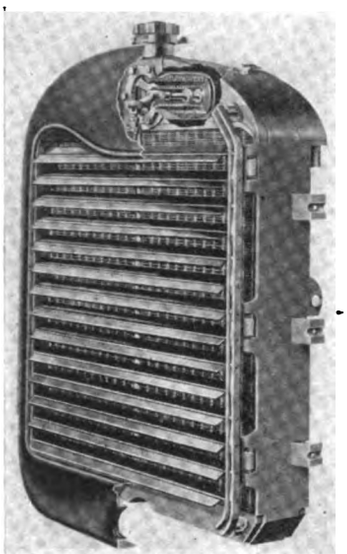
Larger Steering Wheels

The increase in diameter of the steering wheel not only allows a more comfortable position on the part of the driver, but also gives an increased leverage for steering, but this leverage is

Making the Car Easier and More Comfortable to Drive



1—Looking from the rear seat of the Packard Single Six Coupe with its unusual range of visibility. A compact dash arrangement simplifies control of the units. 2—The Reo driving compartment with its convenient driving controls. The switches are on the steering column. 3—Oakland models have a reversible headlamp which can be turned to throw the beam on the engine in case of trouble at night. 4—The Oakland driving compartment. The gear shift lever is unusually long so that the driver has to reach only a few inches from the steering wheel. The dimmer switch is on the steering column



Digitized by Google

still further increased in many cases by a still greater gear reduction in the gear itself, some manufacturers specifications calling for as much as 12 to 1 whereas previously the gear ratio on passenger cars did not go much above 9 as a maximum.

Another trend toward easier steering is in the increased use of anti-friction bearings in the steering pivot pins, especially on the heavier cars. Some manufacturers have adopted ball bearings at this point and others are using tapered roller bearings.

Cadillac uses a condenser for collecting and condensing alcohol vapor which is drawn back into the radiator when it cools

The Lincoln radiator shutters are operated by a Sylphon thermostat according to the engine temperature

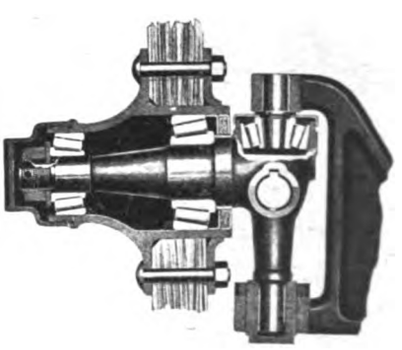
A number of improvements in manufacturing methods are responsible for easier steering without increasing the gear ratio. Most all these methods have to do with better machine methods to reduce friction at a number of points. The alignment of king pins, steering arms and tie rod bolts is one element. The design and layout of the pitman arm is another. The polishing of balls and removing of the machined ridges goes far in preventing the elimination of a lubrication film with consequent friction. Where grease is used as a lubricant for the king pins, it is possible to put it in with sufficient pressure to reach all working parts.

Brake Designs Differ

Considerable diversification exists in the matter of brake design both as to the actual type of braking mechanism and the connecting linkage between the brake pedal and the brakes. It was at one time considered desirable to have brakes equalized and while theoretically this is desirable, it has been found that the unequalized brake operates practically as well as the equalized brake provided the adjustment is properly made on the unequalized brake. Among the equalized brakes, the cable type working through a pulley at the pedal end has gained considerable popularity, being found in the Reo and several other makes. Rolls Royce uses a segment of a differential which has given satisfaction over a considerable period of time. The series B Rickenbacker is also using a differential type equalizer.

The transmission brake which was one of the features of design brought to the front during 1921 has continued to hold the attention of makers. Several companies who did not go over to this form of brake at first have now done so. The Franklin is one of these. The advantage of the transmission brake is that it can be made quite small because it operates through the gear reduction of the rear axle and therefore has a leverage of around 3½ or 4 to 1.

The greatest amount of brake wear generally occurs during the first hundred miles of driving, due to the compression of the lining and the ironing out of the high spots. This generally wears to an extent that the brakes have to be taken up again at the end of this period. Packard has decreased this trouble by running the brakes on revolving drums before the car is turned out of the factory, the process smoothing down the high spots, compressing the lining and putting a polish on the lining much as would be done in the first hundred miles of actual service. It is said that this operation makes unnecessary the customary brake adjustment after the first few days.



Practically all necessary indicating instruments are mounted on the dash today with the exception of the oil gage and the gasoline gage, few satisfactory methods having been developed so far by which these instruments can be so mounted. The new Buick has developed a satisfactory instrument for recording gasoline level at the dash and the new models are so fitted. While it has not been considered feasible to mount an oil level gage on the instrument board, a great majority of cars, especially in the higher price classes, have indicators showing that the oil is actually circulating. These answer the question of oil level in a way, because when the oil gets too low, it stops circulating.

It is universal practice to have an electrical indicator on the dash to show when the battery is being charged and when discharged. On most cars this takes the form of a zero center ammeter with a graduated scale both ways from the zero showing readings up to 20 or 30 amperes. Other indicators, such as that used on the Franklin, simply indicate charge or discharge. The Franklin, and some others, have a control whereby the charging of the battery can be discontinued during long runs in the daytime to prevent overcharging of the battery.

There is a distinct tendency toward the fitting of a clock on the dash even on the more moderate priced cars. On cars using pressure systems of fuel feed it is also customary to have a gage to indicate the tank pressure and where pressure lubrication systems are used the oil gage takes the form of a pressure gage indicating in pounds.

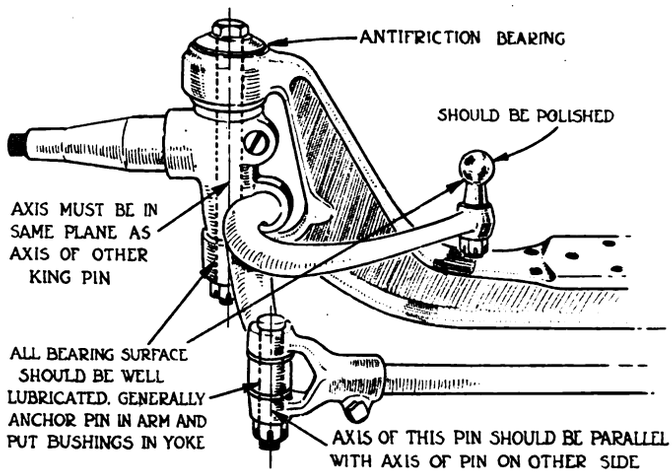
The Engine Temperature

For a long time there has been a growing tendency to consider a water meter as a necessary part of the equipment of the motor car because it gives a direct check on engine temperature and indicates at once any derangement in the cooling or lubrication systems in the engine. A previous disadvantage has been the inability of the driver to see it at night. A new type recently brought out by Moto-Meter allows the dial to be brought in front of the steering column. One or two other makes, notably the Borg & Beck heat indicator, have dials that can be mounted on the instrument board, thus giving the driver an opportunity of watching engine temperature at night as well as in the day time.

Roller bearings applied to the king pins reduce friction at this point. This is a Timken application

The subject of dash indicators would not be complete without a mention of the Whyte Motorcontrol now used on the Haynes model 75. This device places all the indicating instruments under one glass in a compact unit and also contains the spark and throttle levers, switches and horn button.

Greater provision has been made for driver visibility on the 1923 car than



Digitized by Google

ever before. On open models the windshield design is such that a clear vision is afforded all the way across and where a thick support is used this is often filled in with glass, as in the case of the Paige, to afford an even wider range of vision. On closed cars the thick post at the front on both sides has been cut down in size and so proportioned that the smallest section comes opposite the driver's eye. These so-called blind spots, both in front of the driver and behind, have received careful study.

The successful operation of the automatic windshield cleaner has been responsible for its being made part of the standard equipment of many cars. Other cars are often fitted with a manually operated type of windshield cleaner. The automatic types are operated either by a vacuum pump taking vacuum from the intake manifold or by a small electric motor which draws a very small amount of current from the battery.

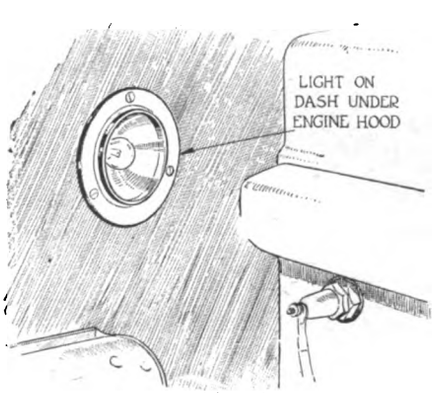
The present practice of slanting the windshield, in addition to improving the appearance of the car, has also been a great help to better driving because it has eliminated the direct reflections of lights from behind. Instead of being thrown directly in the driver's eyes, these reflections are now thrown down.

With all these accessories, controls, instruments and conveniences within arm's reach, the 1923 car can be said to be really the acme of convenience. Within the driver's reach is the control of every piece of mechanism on the car that requires control. The recent development of the stoplight has now made it unnecessary for the driver to even extend his arm when he is about to come to a stop. That is automatically taken care of when he depresses the brake pedal which action lights the step light.

Requirements of easy operating steering gears as exemplified in the 1923 cars. Care in manufacture and assembly has made these improvements possible

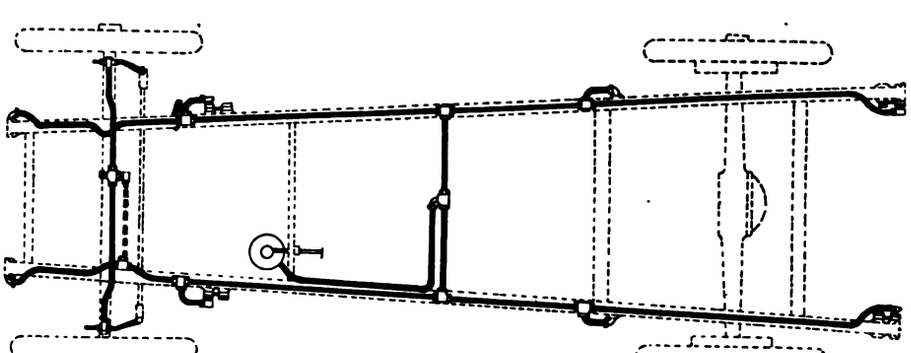
1923 Cars Are Easier to Maintain

Little Jobs the Owner Can Do Have Been Made Easy in the New Cars



THE service an owner gets out of his car depends largely on the care he takes of it. If he lubricates it regularly, keeps it in proper adjustment and takes a real interest in its general welfare, he will realize the long life and performance that the manufacturer has built into it. However, if he neglects it, the car will operate poorly, repair costs will be heavy, and the car will depreciate rapidly.

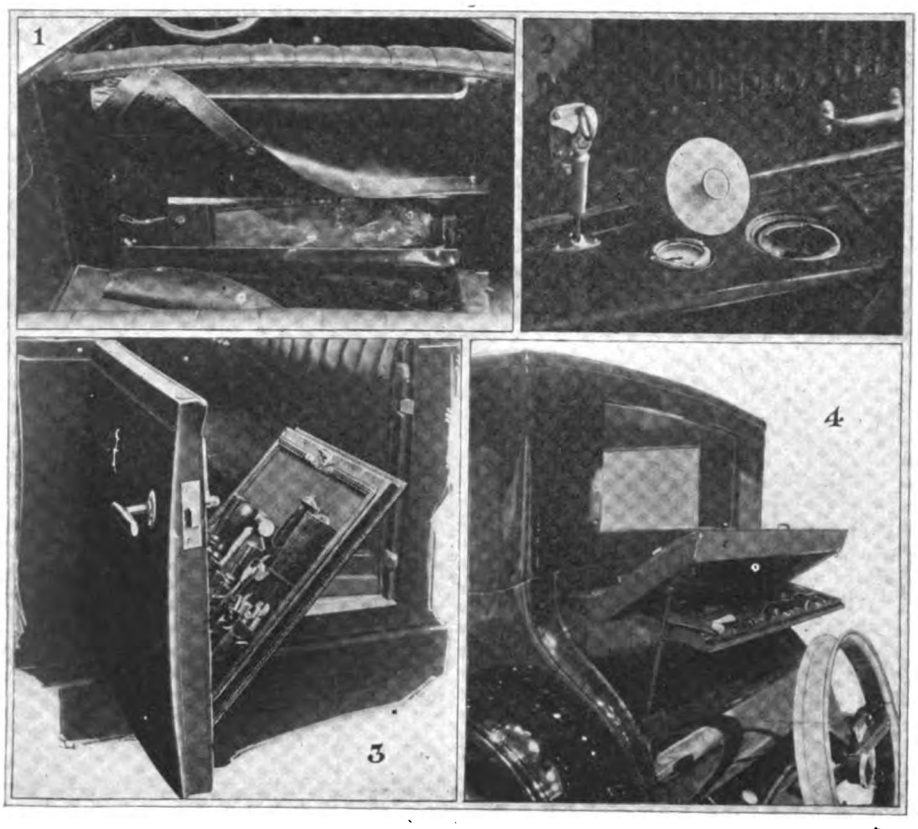
Some owners depend entirely on the service station for maintenance work, and many dealers have established monthly inspection and adjustment services to meet their needs. There are other owners who get some measure of enjoyment out of tinkering around their cars and will do a certain amount of this maintenance work. How much of this work they will do depends on the time and trouble they are willing to spend on it and also on the convenience with which the various little jobs may be done. The easier it is made for an owner to do the little maintenance jobs that add so much to the life and performance of his car, the more likely he is to do them.



There are many features of the 1923 cars that make them easier for an owner to maintain. Such selling points are worth bringing out, especially in the case of the mechanically inclined prospect.

Chassis lubrication is a much simpler job than it used to be on many cars. The installation of pressure fittings for use with a grease or oil gun has taken much of the dirt and inconvenience out of this job. In the case of the Courier, chassis lubrication is taken care of from a central tank by means of oil ducts leading to the various wearing points. A manually operated plunger on the dash supplies the motive force to move the oil.

Some manufacturers have given considerable thought to the location of oil and grease cups with the idea of getting them into more accessible locations. The position of the cup on the top of the Buick steering gear is an example of this. Buick is also placing felt around



The National has a light under the hood to facilitate night repairs and adjustments

The new Courier chassis is lubricated by a central lubrication system. There are no grease or oil cups at any point on the chassis. The Kellogg system is used on this car

1—*Mitchell provides two storage compartments in the back of the front seat —one for the right side curtains and the other for the left side curtains.* 2—*The oil filler and oil level gage are outside of the hood on the Standard Eight.* 3—*Several makers are using this method of storing tools.* 4—*Oldsmobile provides tool storage under the cover of the luggage compartment on the rear deck of one of its closed models*

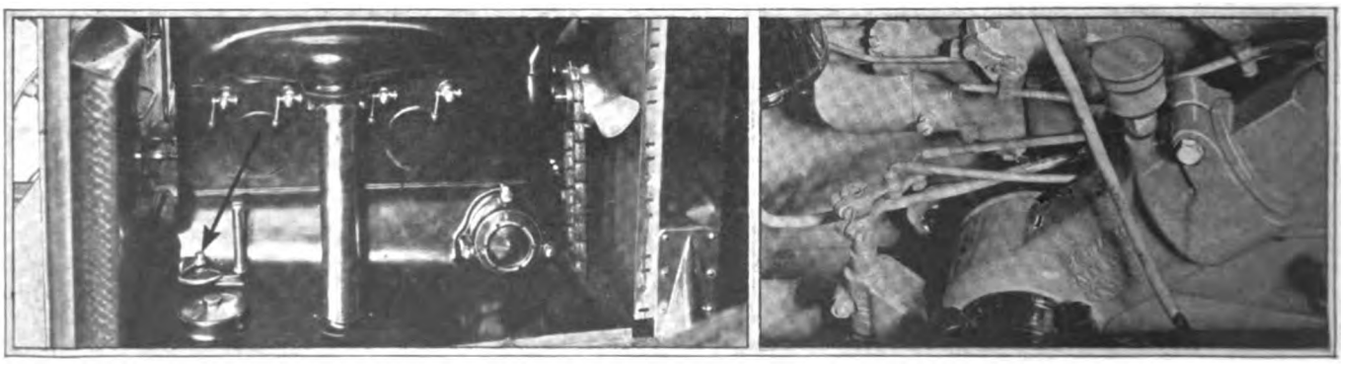
the valve stems inside the springs. The felt acts as an oil reservoir and makes it necessary to lubricate at these points less frequently. Holes, with sliding covers, have been placed in the rocker arm covers so that the rocker arms may be oiled without removing the large cover.

Dort, in the new six cylinder job, has made the lubrication of the overhead valve mechanism automatic. This unusual construction, which eliminates maintenance at this point entirely, is described and illustrated on page 48 of this issue of Motor World.

On the Standard Eight, the engine oil supply may be replenished and the oil level gage read without lifting the hood. The dry sump system of lubrication is used in this engine. In this system, the oil supply is carried in an external reservoir and, in the case of the Standard, this reservoir is located on the frame side member. This makes it possible to get the oil filler opening and the oil gage outside of the hood.

As the quality of the fuel has gone down, difficulties due to crankcase dilution have increased. The unburned portion of the fuel has constantly been becoming a larger percentage of the total and consequently complete changes of crankcase oil are necessary more frequently. When the drain plug is located underneath the car, draining the oil is a dirty and disagreeable job. Some makers, including Marmon, Peerless, Velie and Rubay, have made provision for opening this plug from the top, which makes a much simpler job of changing the oil.

More Accessible Batteries



The accessibility of the battery has a very important effect on the care it gets. If it is hard to get at, the chances are it will not get water as often as it should. The most popular location seems to be under the front seat and this is a comparatively good one from the standpoint of accessibility. Batteries located between the splasher and the frame are also convenient for the owner to maintain although, in some cases, this does not permit a desirable installation from the service station viewpoint.

Brake adjustments are about the same as in other years. However, some makers are providing larger brakes which makes adjustments necessary less frequently. Packard is running the brakes in at the factory to avoid the adjustment that is usually necesary at the end of about 200 miles of operation.

Better Quality Tools

Tools supplied with cars as regular equipment are of better quality generally and the outfits are more complete. The provision for storing tools is also better in many cases. Peerless has a very neat tool compartment in the right front door and Oldsmobile has provided tool storage facilities in one of its closed models, in the cover of the luggage compartment on the rear deck.

The provisions for carrying side curtains have been materially improved. The practice of carrying them in the top has about disappeared. Some makers are storing them in the door pockets and others in the back of the rear seat. The arrangement on the Mitchell is unusually good. On this car there are two compartments in the rear of the front seat —one compartment for the left side curtains and the other for the right side curtains.

1—*The dilution of the oil in the crankcase by unburned fuel necessitates frequent changes of the oil. This condition results from the low grade fuel available at the present time. This operation is made comparatively easy by having the drain plug operated from above as otherwise it is necessary to crawl under the car to open it. The illustration shows this feature on the Rubay.* 2—*Lubrication on the Buick steering gear is made easier by turning the housing around so that the grease cup is on top. This new position also prevents the grease leaking out*

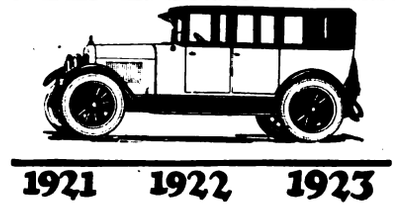
They've Quit Juggling Motor Car Styles

Standardization of Appearance Will Help the Salesman in His Work

NOT so long ago, each year was marked by radical changes in body styles. Looking backward ten years, the 1913 bodies were enough different from those of 1912 to make the two readily distinguishable. The differences between the 1923 and the 1922 bodies, however, are so slight that, with few exceptions, the two are not easy to distinguish. In all general respects, this year's cars are similar in appearance to last year's. Such changes as have been made during the past year are for the most part of a minor nature and do not materially alter the general appearance of the car.

The changes that have been made, however, have all resulted in improved appearance, and have been factors in making the 1923 car the best appearing one that has ever been built. The fact that 1923 brings no radical body changes is an important selling point. It means that body styles are approaching standardization. The 1923 car may be bought with complete confidence that it will be stylish in appearance for several years to come.

Styles Are Stabilized



Style is of considerable importance to most prospects. People don't like to have the age of their cars advertised by the style of the bodies any more than they like to wear clothes that are out of style. Because, each year, the changes in body styles have become less and less noticeable, it is safe to predict that body styles for several years to come will be very similar to the current ones. Consequently, the 1923 car is an unusually good buy from the investment standpoint as it is not likely to depreciate because of changes in body styles that would make it old-fashioned in appearance.

Exceptions help to prove any rule. There are a few cars that present a radically changed appearance for 1923. The new models, however, are in every case in strict accord with the current styles. Where radical changes have been made in the body styles, the 1922 models, in most cases, varied materially in appearance from the prevailing styles of a year ago. Consequently the changes made in the 1923 models simply mean that these makers have given their cars a more conventional appearance.

The prevailing styles call for a long, low car. This is especially true of the open models although many of the closed cars possess these characteristics to a greater degree than ever before. Straight side rails, straight line hoods and somewhat rectangular radiators help give the 1923 cars the desired appearance of length and also give apparent reductions in height.

Speaking of Styles

MEN engaged in selling automobiles can turn to their advantage the fact that car appearance has become noticeably standardized. Radical changes from year to year are of the past, if developments of the past two or three years may be taken as a criterion. The public likes the long, low bodies now being produced, and the straight lines, which accentuate length and lowness, have also met with general approval. Consequently there is no reason for the sudden changes in design that marked the experimental stage of the industry. Dealers and salesmen can sell the fact that the stylish 1923 cars will be in style for several years to come. Buyers who go strong on appearance needn't worry about making an investment in a 1923 model; they won't be ashamed of it next year. What are the appearance features of your car? Why does it "look like the money"? What are its strong points of good looks that have been in development for three or four years to the point where they are going to stay put? In view of the fact that appearance counts so much with some buyers, the subject is worth study, isn't it?

The use of the high radiator with a practically horizontal hood line is now almost universal. In practically every case, the hood line and the cowl line are continuous. Dodge, Chevrolet and Peerless have made changes to secure this effect. In the case of Dodge and Chevrolet, the radiator shape is about the same except for the greater height. In the case of Peerless, the shape of the radiator is entirely changed.

Straight Lines Predominate

The long straight lines of the prevailing body styles naturally give a low appearance. In some cases, the overall heights of the bodies have undergone actual reductions. The tops of the side frame members on the Buick Six are three inches lower than in former models. This was accomplished by a change in the spring suspension. Peerless has made the wheelbase three inches longer and has reduced the wheel sizes, both changes making for more stylish appearance. Small wheels and tires are also in very great favor. There are only four makers using the 35-in. size and eight using the 34-in. size. Practically all the manufacturers are equipping with tires of 33 in. or less diameter.

There are a few other changes affecting appearance that have been more or less general. The drum type head lamp is used almost universally on the 1923 models. Nickel trim is being more widely used and disk wheels have attained considerable popularity. Not considering sport models for the present, equipment is more complete and this is especially true on the closed models. Consequently the car buyer has less money to spend for additional equipment that is very nearly essential to the operation of the car. And this equipment, which consists of Moto-Meters, bumpers, sunshades, etc., adds materially to the general appearance of the car. The California top has also gained in favor.

Permanent Top Popular

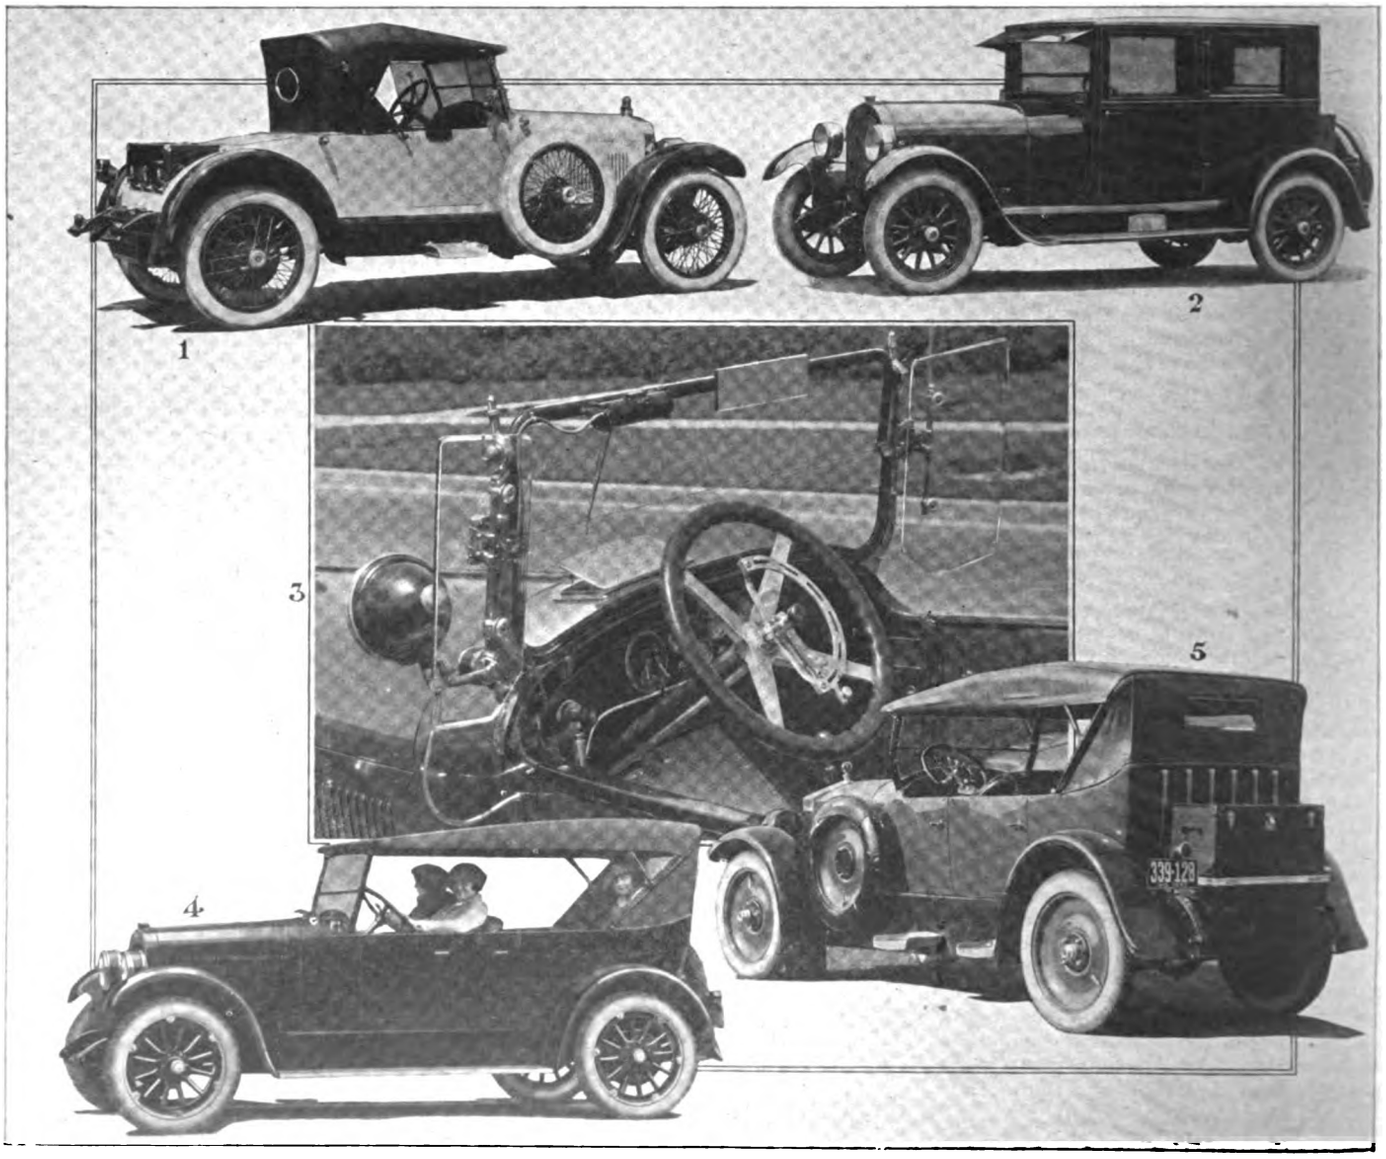
The phaeton with a permanent top will be seen in considerably greater numbers than ever before. Starting several years ago as a California top, this feature has proved very popular. At present some of the types are known as Pasadena tops. The price of these permanent top phaetons is in between the regular phaeton and the sedan or coach, it has nearly all the advantages of the really closed type as well as the usual advantages of the open car and in addition such conveniences as dome lamps can be used which are not possible with the collapsible tops.

Digitized by Google

Inasmuch as practically nobody ever drives with a top down either in warm or cold weather, there is no reason why the permanent type top should not be one of the popular models in 1923. The weather proof features and convenience of sliding windows as against curtains should make it appeal to the prospect if nothing else. The new Rickenbacker Series B features a permanent top job.

The two outstanding developments of the year are the sport models and the low-priced two door sedan jobs. The appeal of the sport model results largely from its appearance. The appeal of the low-priced two door sedan is, of course, mostly from the standpoint of its utility, but the manufacturers have made this type very attractive for its appearance also.

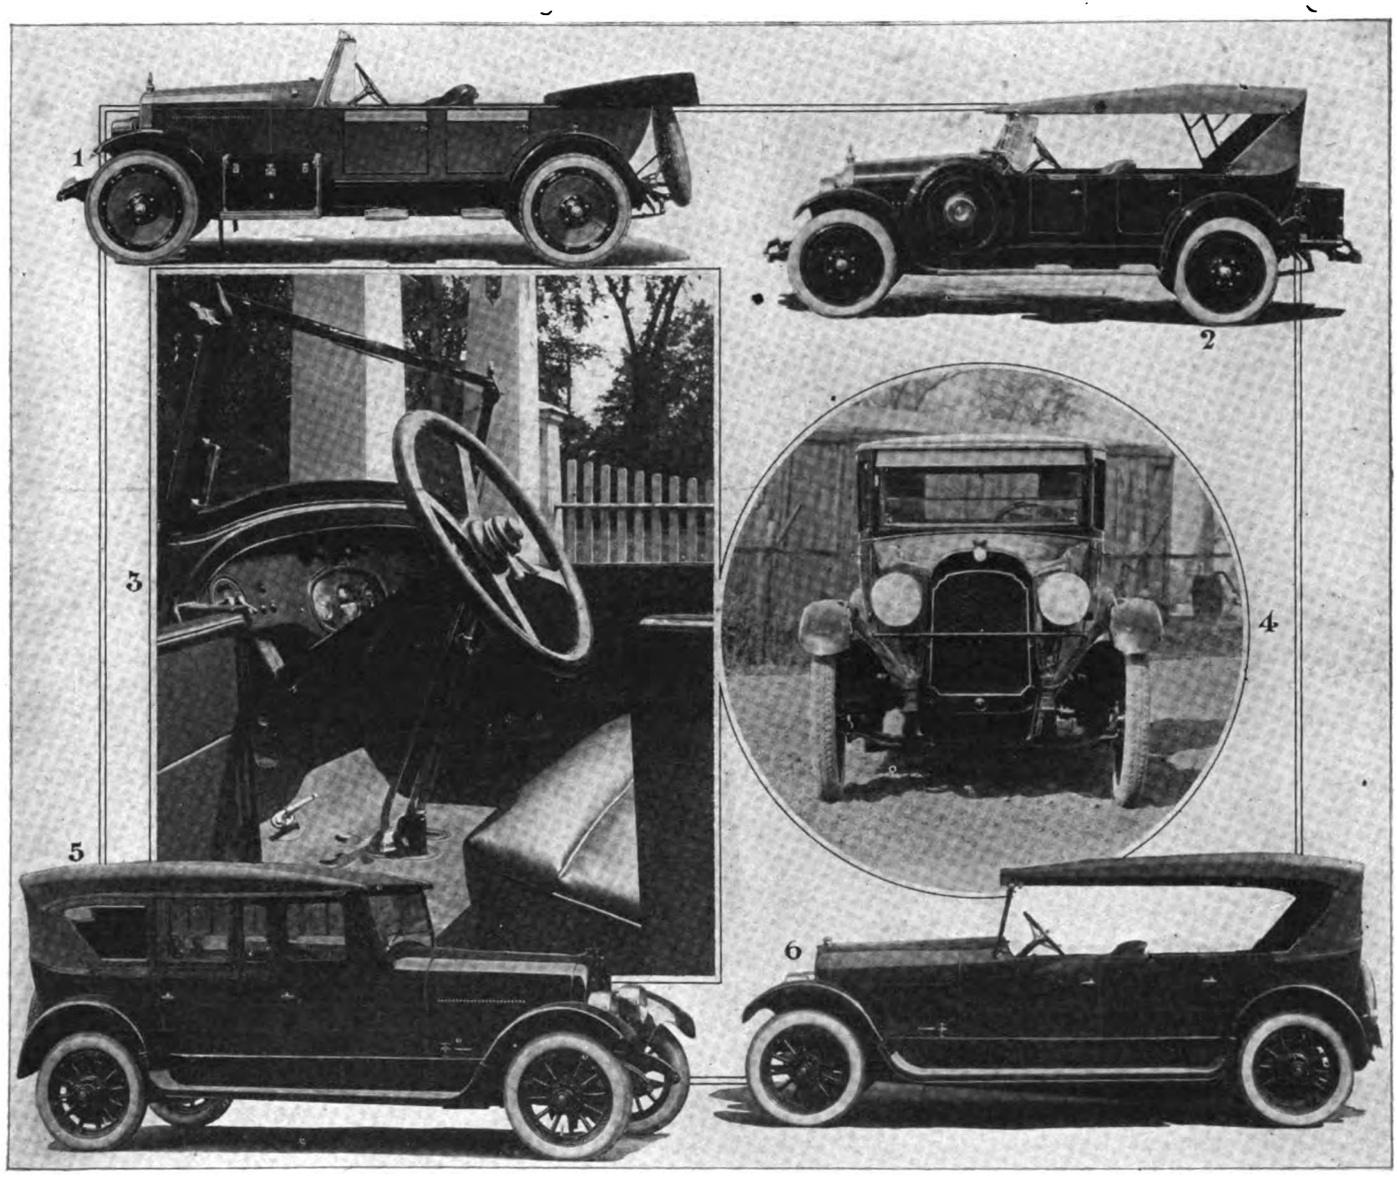
The sport models have some advantages from the standpoint of comfort and utility resulting from the more complete equipment, but people buy them primarily because of their snappier appearance. These models are painted in brighter colors and they are fitted out with a thorough equipment of accessories, many of which are finished in nickel. Sport models of the roadster and phaeton types are now being produced by about 50 different manufacturers.



Sport Models Better Looking

Many of the early sport models had individual aluminum steps, but the running board is now being used more generally. Polished aluminum scuff plates are frequently fitted on the splasher and these simulate the appearance of the steps. A trunk and trunk carrier are frequently included in the equipment. Generally this equipment is located in the rear as on the Nash, and in such cases polished trunk bars are mounted on the rear of the body to protect the finish and also to improve the appearance. Nash mounts the spare wheel on the runningboard forward of the door to the driver's compartment. Auburn carries the spare at the rear and mounts the trunk just in back of the left front fender.

Disk wheels are usually furnished as regular equipment on sport models. Other equipment includes cowl ventilators, windshield wings, front and rear bumpers, Moto-Meters, smoking sets, rear vision mirrors, foot rests, robe rails and the like.



The bodies are usually narrower in the rear than the standard types and the use of wheel housings is obviated. Fenders are fastened flat against the body sides. Lake (purplish red) and

Straight Lines Feature 1923 Body Styles

Straight Hood Lines Find Universal Favor

Practically all makers have adopted the high radiator with the hood line running clear back to the windshield. 1—Auburn sport model with trunk forward of the cowl. Disk wheels are typical of this body type. 2—Nash sport model with spare wheel forward and trunk rack at rear. Scuff plates on splasher simulate individual steps. 3—Simple controls and clean dashboards improve appearance. The illustration shows the Jordan. 4—Buick, Studebaker and Chalmers are using a bright metal bead around the opening in the radiator shell. 5 and 6—Marmon phaeton with permanent top with and without glass side panels

black, and blue and black are the predominating sport body colors. These offer a very excellent background for the extensive nickel trimmings used. Striping is frequently employed.

The low-priced closed cars are almost without exception of the close-coupled variety. To many people, these short closed bodies are much more attractive than the regular four-door sedan type. The overhang at the rear is entirely eliminated in this body style, and the proportions are unusually pleasing. The doors are wide and the windows are broad, both of which characteristics improve the appearance of the car.

This two door sedan type, which is known variously as coach, brougham, etc., have very fine proportions. They are longer than a coupe and shorter than a sedan. The wide doors and large quarter panes improve the lines generally. Some makers provide a trunk and trunk rack to finish the body off at the rear. Curves are avoided in these bodies to reduce production costs, but with prevailing body styles this is an advantage from the standpoint of appearance as straight line bodies are most popular. Something has been sacrificed in interior finish and appearance in this body type to secure low price, but at that these bodies are decidedly attractive.

The all steel construction used by Dodge Brothers on the business coupe and sedan has advantages from the appearance standpoint. This construction permits a baked on finish that should be very durable. This, of course, means that this car will retain its bright finish for a longer period. There has been a general improvement in painting methods which should result in more durable finishes and this fact will contribute towards making the 1923 car better looking.

Disk wheels have gained considerably in favor during the past year. Many people like their appearance better than other types of wheels, and they are easier to keep clean.

Getting back to the appearance of the new cars generally, the general cleaning up of the instrument boards is a noteworthy development in the 1923 models. The speedometer makers have provided combination units in attractive casings which eliminate crowding by placing several instruments under one glass. These combinations sometimes include speedometer, clock, oil gage and ammeter, and in other cases only the speedometer and the clock.

Operating the New Cars Is Less Expensive

Better Materials and Finish, Improved Accessibility and Lesser Fuel and Storage Costs

EVERY person in the country wants an automobile. Only two things stand in the way of the consummation of this desire, the ability to pay for it and the ability to pay for running and keeping it. Prospects may be roughly divided into three classes:

1—Well-to-do, with whom the first cost and upkeep are immaterial.
2—In comfortable circumstances, able to pay a moderate cost, but have to be economical about upkeep.
3—Not so well off, to whom the first cost is something of an obstacle and cost of upkeep also important.

The people who buy the most cars in this country are in the last two groups and the cost of operation is important to both. During the latter part of the world war and in the period of high prices following it, the cost of upkeep rose to such a point that many people who were able to pay for a car were unable to keep it. The idea still persists in the minds of many that these conditions still prevail.

To the prospect's question, "How much does it cost to operate?" the salesman will have to answer not so much in dollars, but in comparison with costs before and during the war.

General Items of Expense

There are nine general items of expense in the operation of a passenger car. In the order of their size they are:

Depreciation
Gasoline
Storage
Repairs
Tires
Oil
Insurance
License fees and taxes
New equipment.

It will cost less to operate the 1923 car than earlier cars. This reduction is brought about in some cases by changes within the car itself and, in other cases, by changes in outside conditions.

Depreciation has always been one of the biggest items of expense, and this will be reduced considerably in the 1923 car. The depreciation of the car is the difference between the price paid and the present value. Many factors in the car itself help to make this difference less; in other words, to increase the value of the used car. Better paint jobs mean a great deal in improving appearance, which figures materially in selling a used car. Improved methods of painting and the increasing use of steel bodies with baked on enamel or japan make lasting jobs.

Another feature in the reduction of depreciation is the tendency to retain body and chassis lines in new models. The most rapid depreciation occurs when makers turn out new models with entirely different looking bodies or chassis. There is a decided tendency in the new cars to retain the general features of the 1922 cars, and it is quite likely there will be less and less change as time goes on.

Reducing Depreciation

More durable materials and better workmanship mean longer life, and the longer the life of the car, the less depreciation has to be written off each year. Better facilities are also provided for owner upkeep. This means that the owner, by proper lubrication, adjustment and minor repair, can keep the vehicle almost as good as new for an indefinite length of time, so far as operating conditions are concerned.

The gasoline bill for the 1923 car is going to be considerably lower. Improvements made within the last two years have made it possible to burn the present day low grade fuels more nearly completely and under all conditions, and this results in increased gasoline mileage. Manifold hot spots, air heaters, improved carbureter designs and a study of the whole combustion problem have contributed largely to the better burning of fuel. The control of the engine temperature by shutters, thermostats, thermo-syphon systems or radiator covers in cold weather is responsible for warmer engines, which are able to operate much more efficiently than cold engines. Another factor entering into the reduction of fuel costs is the lower price of gasoline, which is to-day some 10 to 15 per cent less than it was a year ago. It is not safe to predict that gasoline will be lower in price, but it is fairly safe to say that it will not go higher than it is now.

The storage of the car for a time was a considerable element in the expense of upkeep. This, like all housing problems, was an outgrowth of the war and caused largely by the diverting of building materials and labor to war-time enterprises. The building of both public and private garages fell far behind and costs accordingly went up. With the resumption of building and the lowering in price of building materials, it is now possible to build a private garage for a moderate sum, and the building of public garages has been going on at such a rate that the shortage of storage space is rapidly being overcome and storage prices have dropped to a point where they are quite reasonable, in fact, only slightly higher in most cases than before the war.

Repairs on the average represent only about 8 to 10 per cent of the cost of upkeep. Repair costs have come down due to the reduction in price of parts and the more economical methods used in service stations.

Low Tire Expense

Tire expense is reduced more in proportion than any other item of upkeep. Tires are cheaper now than ever before in the history of the automobile. In addition to this, the general use of the cord tire has increased tire mileage from an average of 4000 or 5000 to upwards of 12,000. The cord tires cost no more now than the fabric tires did before the war, and the fabric tires, with less mileage, cost even less.

Oil and grease are not subjects of reduced costs and should not be. The price of oil is somewhat lower than it was, but it takes just as much oil and grease to properly lubricate the car as it ever did, and to feature a greater number of miles to the gallon of oil is simply preaching ruination of the mechanism. The cost of lubrication is a small proportion of the total cost.

Insurance, license fees and taxes are in general about the same as they have been in the past. Many changes in the wiring, addition of locks and fire prevention features have made it possible to secure better ratings from the insurance companies.

The Cost Per Mile

PASSENGER cars can be operated to-day at a cost of from 8 cents a mile upwards, the lower prices applying, of course, to the lighter and lower priced cars. This means that with more than two people in the car, the cost of transportation is on a par with railroad transportation. In some cases the cost is less. Lower costs in the car itself, its parts and service and lower prices of outside supplies necessary to car operation have brought about this reduction in the cost of running the car.

80 Car Makers to Exhibit in the National Shows

List Shows a Reduction of Twelve from Last Year
The Complete List for Both Shows

EIGHTY car makers have been allotted spaces in the New York and Chicago shows. This is twelve less than were registered for these shows a year ago. The corporate names of the exhibitors, their addresses and the cars they make are given, also whether they exhibit at New York, Chicago, or both shows.

More Than 300 Equipment Makers Will Show New Products

DEMANDS for space in the equipment sections of the New York and Chicago shows again exceeded the available supply. More than three hundred manufacturers were accommodated, however, and the section promises to be widely representative of this part of the industry.

Where the "Most Salable Car Ever Built" Will Be Displayed in the 1923 Shows

THERE is every indication that the automobile shows of 1923 will far outstrip the shows of former years in number as well as in beauty and the application of up-to-the-minute selling effort. Nearly every state is represented now in the roll call of shows for next year, and every week brings the announcement of more to be held.

While the past few weeks have produced some shows, the season will open in a big way with the National Shows in New York and Chicago in January. From these larger expositions of the manufacturers, the shows will spread across the country into cities and towns, providing the opportunity for millions of people to see "the most salable car ever built," and opportunities for distributors and dealers to meet these millions of people in the shows and make new prospects for the big spring selling season that the shows usher in.

Following is a list of the shows announced to date. Is your show here? If not, send in the information and answer "here" to the 1923 roll call.

Erie, Pa.....Jan. 1-6
Annual Automobile Show, under the auspices of the Automotive Association of Erie, C. R. Cummins, manager.

New York....Jan. 6-13
Annual Automobile Show held under the auspices of the National Automobile Chamber of Commerce.

New York....Jan. 8-13
Second National Automobile Body Builders Show, Twelfth Regiment Armory, under the auspices of the Automobile Body Builders Association.

Pasadena....Jan. 8-13
Annual Automobile Show, Hotel Green, under the auspices of the Pasadena Motor Car Dealers Association, D. B. Hall, manager.

Pittston, Pa.....Jan. 9-13
First Annual Automobile Show, State Armory, David Harris, manager.

Oakland, Cal.....Jan. 13-20
Fifth Annual Automobile Show, Civic Auditorium, under the auspices of the Alameda County Automobile Trade Association, Robert W. Martland, manager.

Buffalo....Jan. 13-20
Twenty-first Annual Automobile Show, 174th Regiment Armory, under the auspices of the Buffalo Automobile Dealers Association, Carl Proctor, executive secretary.

Philadelphia....Jan. 13-20
Twenty-second Annual Automobile Show, Commercial Museum Building, under the auspices of the Philadelphia Automobile Trade Association, Louis C. Block, president.

Hudson, N. Y.....Jan. 16-20
Hudson Automobile Show, State Armory, under the auspices of Company M, J. M. Callahan, manager.

Scranton, Pa.....Jan. 18-20
Commercial Car Show, Armory, under the auspices of the Scranton Motor Trades Association, Hugh B. Anderson, manager.

Detroit....Jan. 20-27
Twenty-second Annual Automobile Show, Inclusive of Passenger Cars, Trucks and Accessories, Municipal Garage Building, under the auspices of the Detroit Automobile Dealers Association, H. H. Shuart, manager.

Baltimore....Jan. 20-27
Annual Automobile Show, Fifth Regiment Armory, under the auspices of the Baltimore Automobile Trade Association, John E. Raine, secretary.

Milwaukee....Jan. 20-27
Fifteenth Annual Automobile Show, Auditorium, under the auspices of the Milwaukee Automotive Dealers Association, Bart J. Ruddle, manager.

Cleveland....Jan. 20-27
Annual Automobile Show, New Public Auditorium, under the auspices of the Cleveland Automobile Manufacturers and Dealers Association, Herbert Buckman, manager.

Mortreal....Jan. 20-27
National Motor Show of Eastern Canada, Almy's Building, under the auspices of the Montreal Automobile Trade Association, Limited, Adelstan Levesque, manager.

Reading, Pa.....Jan. 20-27
Annual Automobile Show, Corbitt Garage Building, under the auspices of the Reading Automobile Trade Association, H. C. Lutz, manager.

Scranton, Pa.....Jan. 22-27
Annual Automobile Show, Armory, under the auspices of the Scranton Motor Trades Association, Hugh B. Anderson, manager.

Middletown, Conn.....Jan. 24-27
Second Annual Automobile Show, Armory, under the auspices of the Middletown Automotive Dealers Association, Charles H. Brewster, chairman.

Chicago....Jan. 27-Feb. 3
Annual Automobile Show, under the auspices of the National Automobile Chamber of Commerce, Coliseum.

Chicago....Jan. 27-Feb. 3
Annual Automobile Salon, Drake Hotel.

Wilkes-Barre....Jan. 29-Feb. 3
Fourteenth Annual Automobile Show, Armory, under the auspices of the Automobile Dealers' Association of Wilkes-Barre, R. A. Rosenkrans, chairman.

Binghamton, N. Y.....Jan. 29-Feb. 3
Annual Automobile Show, State Armory and Kalurah Temple, under the auspices of the Binghamton Automobile Dealers Association, John W. Williams, manager.

Ann Arbor, Mich.....Jan. 29-Feb. 3

Minneapolis....Feb. 3-10
Annual Automobile Show, Overland Building, under the auspices of the Minneapolis Automobile Trade Association, W. R. Wilmot, manager.

Portland, Ore.....Feb. 3-10
Annual Automobile Show, Municipal Auditorium, under the auspices of the Portland Automobile Dealers Association.

Troy, N. Y.....Feb. 3-10
Ninth Annual Automobile Show, State Armory, under the auspices of the Troy Used Car Sales Corp., Frank M. Baucus, manager.

Pittsburgh....Feb. 3-10
Twenty-sixth Semi-annual Automobile Show, Motor Square Garden, under the auspices of the Pittsburgh Automotive Dealers Association.

Allentown, Pa.....Feb. 3-17
Annual Automobile Show, Lehigh Automotive Trade Association Building, under the auspices of the Association, E. T. Satchell, president.

Winnipeg, Man.....Feb. 5-10
Third Annual Automotive Equipment Show with Radio Exhibits in Connection, under the auspices of the Western Canada Automotive Equipment Association, W. L. Williams, secretary.

Charlotte, N. C.....Feb. 5-10
Annual Automobile Show, Made-in-Carolinas Exposition Building, under the auspices of the Charlotte Automotive Trade Association.

Lansing, Mich.....Feb. 5-10

Toledo....Feb. 5-10
Annual Automobile Show, Terminal Auditorium, under the auspices of the Toledo Auto Shows Co., H. V. Buelow, manager.

Winnipeg, Ont.....Feb. 5-10
Annual Automobile Show, Minto Armories, under the auspices of the Winnipeg Motor Trades Association, A. C. Emmett, manager.

Waterbury, Conn.....Feb. 5-12
Third Annual Show at the New State Armory, under the auspices of the Waterbury Automotive Dealers Association. Passenger Cars and Accessories. M. A. Doolittle, chairman of the show committee.

Digitized by Google

Cincinnati .....Feb. 7-14
Automobile Show, under the auspices of the Cincinnati Automobile Dealers Association, Harry T. Gardner, manager.

Kansas City, Mo.....Feb. 10-17
Annual Automobile Show, under the auspices of the Kansas City Motor Car Dealers Association, George A. Bond, secretary.

St. Louis .....Feb. 10-17
Annual Automobile Show, Universal Building, under the auspices of the St. Louis Automobile Dealers Association, Robert E. Lee, manager.

Kalamazoo and Flint, Mich.....Feb. 12-17

Utica, N. Y.....Feb. 12-17
Annual Automobile Show, under the auspices of the Utica Motor Car Dealers Association, Inc., W. T. Love, field secretary.

Fort Dodge, Iowa.....Feb. 13-16
Annual Automobile Show, Sullivan Building, under the auspices of the Fort Dodge Automobile Dealers Association, John H. Wilkenson, manager.

Orlando, Fla.....Feb. 13-17
Annual Automobile Show, Fair Grounds, under the auspices of the Orlando Automotive Dealers Association, C. E. Howard, manager.

Flint, Mich.....Feb. 13-27
Annual Automobile Show, under the auspices of the Flint Automobile Dealers Association, Ralph Knight, manager.

Sioux City, S. D.....Feb. 14-17
Annual Automobile Show, City Coliseum, under the auspices of the Sioux Falls Automobile Dealers Association.

Columbus .....Feb. 15-21
Annual Automobile Show, Memorial Hall, under the auspices of the Columbus Automobile Dealers Association, Anson B. Coates, manager.

Hartford, Conn.....Feb. 17-24
Annual Automobile Show, Armory, under the auspices of the Hartford Automobile Dealers Association, Arthur Fifoot, secretary.

Atlanta .....Feb. 17-24
Annual Southern Automobile Show, Atlanta Auditorium, under the auspices of the Atlanta Automobile Association, Virgil W. Shepard, manager.

San Francisco.....Feb. 17-24
Seventh Annual Pacific Automobile Show, under the auspices of the San Francisco Motor Car Dealers Association, Exposition Auditorium, George A. Wahlgreen, manager.

Grand Rapids and Mt. Clemens, Mich. Feb. 19-24

White Plains, N. Y.....Feb. 19-24
Third Annual Automobile Show, Armory, under the auspices of the White Plains Automobile Dealers Association. Callahan & Partlan, directors.

Schenectady, N. Y.....Feb. 19-24
Annual Automobile Show, Armory, under the auspices of the Schenectady Automotive Dealers Association, John T. Henley, manager.

Louisville, Ky.....Feb. 19-24
Fifteenth Annual Automobile Show, under the auspices of the Louisville Automobile Dealers Association, George T. Holmes, secretary.

Trenton, N. J.....Feb. 21-24
Annual Automobile Show of Passenger Cars, Trucks and Accessories, Armory, under the auspices of the Trenton Automobile Trade Association, Frederick Petry, Jr., manager.

Albany, N. Y.....Feb. 24-March 3
Thirteenth Annual Albany Automobile Show, State Armory, under the auspices of the Albany Automobile Dealers Association, J. B. Wood, manager.

Brooklyn, N. Y.....Feb. 24-Mar. 3
Annual Automobile Show, under auspices of the Brooklyn Motor Vehicle Dealers Association, 23rd Regiment Armory.

Des Moines .....Feb. 25-March 5
Fourteenth Annual Automobile Show, Coliseum, Passenger Cars and Accessories only, under the auspices of the Des Moines Automobile Dealers Association, Dean Schooler and C. G. Van Vliet, manager.

Omaha .....Feb. 26-March 3
Seventeenth Annual Show of Passenger Cars, Trucks and Accessories, Municipal Auditorium, under the auspices of the Omaha Automobile Trade Association, A. B. Waugh, manager.

Muskegon, Mich.....Feb. 26-March 3

Yonkers .....Feb. 26-Mar. 3
Annual Automobile Show, State Armory, Callahan & Partlan, directors.

Syracuse .....Feb. 26-March 3
Annual Automobile Show under auspices of the Syracuse Automobile Dealers Association, C. H. Hayes, manager.

Springfield, Mass.....Feb. 26-March 3
Annual Automobile Show, under the auspices of the Springfield Automotive Dealers Association.

Oklahoma City.....Feb. 26-March 3
Annual Automobile Show, Coliseum, under the auspices of the Oklahoma City Motor Car Dealers Association, Edgar T. Bell, manager.

Portland, Me.....Feb. 26-March 3
Annual Automobile Show, under the auspices of the Portland Automobile Dealers Association, Myton D. Kidder, manager.

Poughkeepsie, N. Y.....Feb. 28-March 3
Annual Automobile Show, Marian Building, under the auspices of the Poughkeepsie Automotive Dealers Association, Charles Brooks, manager.

Amsterdam, N. Y.....March 5-10
Fourth Annual Automobile Show, State Armory, J. J. Callahan, director.

Bay City, Mich.....March 5-10

Indianapolis .....March 5-10
Spring Automobile Show, under the auspices of the Indianapolis Automobile Trade Association, John B. Orman, manager.

Nashville, Tenn.....March 5-11
Annual Automobile Show, Hippodrome Building, under the auspices of the Nashville Automobile Trade Association, H. W. Shanks, chairman.

Saginaw, Mich.....March 7-11
Annual Automobile Show, Saginaw Auditorium, under the auspices of the Saginaw Automobile Dealers Association, R. P. Bishop, secretary.

Newark, N. J.....March 10-17
Annual Automobile Show, under the auspices of the New Jersey Automobile Exhibition Co., Claude E. Holgate, manager.

Third Annual Spring Show of Passenger Cars and Accessories, Convention Hall, under the auspices of the Washington Automotive Trade Association, Rudolph Jose, chairman of show committee.

Boston .....March 10-17
Annual Automobile Show, Mechanics Building, under the auspices of the Boston Automobile Dealers Association and the Boston Commercial Motor Vehicle Association, Chester I. Campbell, manager.

Port Huron, Mich.....March 12-17

Battle Creek, Mich.....March 19-24
Annual Automobile Show, under the auspices of the Battle Creek Automobile Dealers Association.

Greenville, S. C.....March 28-31
Annual Automobile Show, Textile Hall, Browning Goldsmith, chairman of show committee.

Alpena, Mich.....April 2-7

Green Bay, Wis.....Aug. 27-30
Annual Automobile Show, Brown County Fair Grounds—De Pere, Wis., under the auspices of the Green Bay Association of Commerce, W. F. Kermin, managing director.

Sacramento .....Sept. 3-8
Annual Automobile Show, State Exposition Grounds, under the auspices of the Motor Car Dealers Association of Sacramento, H. W. Leonard, manager.

Memphis .....Sept. 23-30
Annual Automobile Show, Tri-State Fair Grounds, under the auspices of the Automobile Dealers' Association, Thomas H. Smart, manager.

Little Rock, Ark.....Oct. 8-13
Annual Automobile Show, under the auspices of the Little Rock Automobile Dealers Association, A. W. Parke, manager.

ALABAMA TERRITORY CONTINUES GAINING

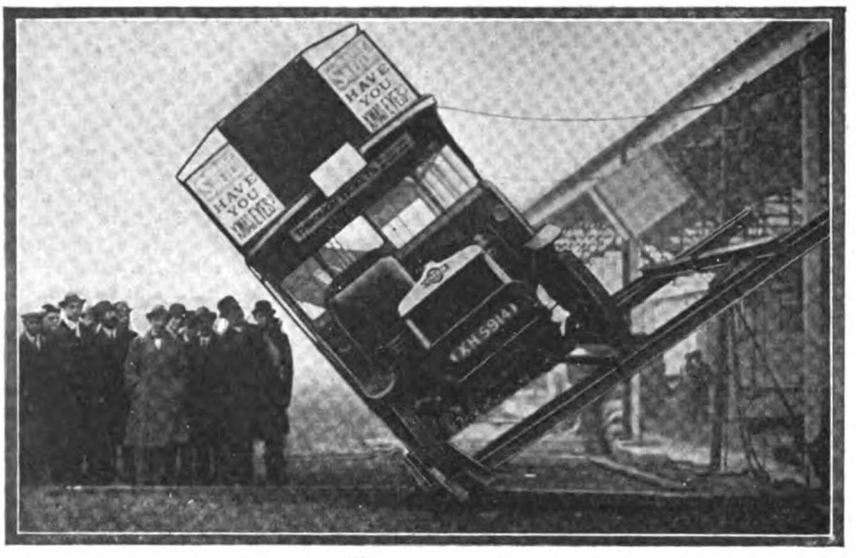
BIRMINGHAM, Dec. 26—As an indication of the trade and activity in all lines in the Birmingham district, the fact that the reported bank clearings for the months of September, October and November have totaled more than $350,000,000, and in each month have exceeded the $100,000,000 mark against a previous high-water mark of $89,000,000 in December, 1920, is worthy of note. The records of clearings are compiled in exactly the same manner as they were during the years 1920 and 1921.

The activity in automobile sales has had a great deal to do with the enormous gain in the clearings, which amounted to 44 per cent more than the clearings in the same months last year.

Conditions in Birmingham are continuing to improve instead of striking the peak, with practically every furnace in operation and all the iron and steel product manufacturing plants going at full force. With all minor industries feeling the effects of the trade revival, and with only the reduction in the production of coal on the wrong side of the ledger, automobile dealers are justified in their feeling that the coming winter will show the largest sales of any year in the history of the city.

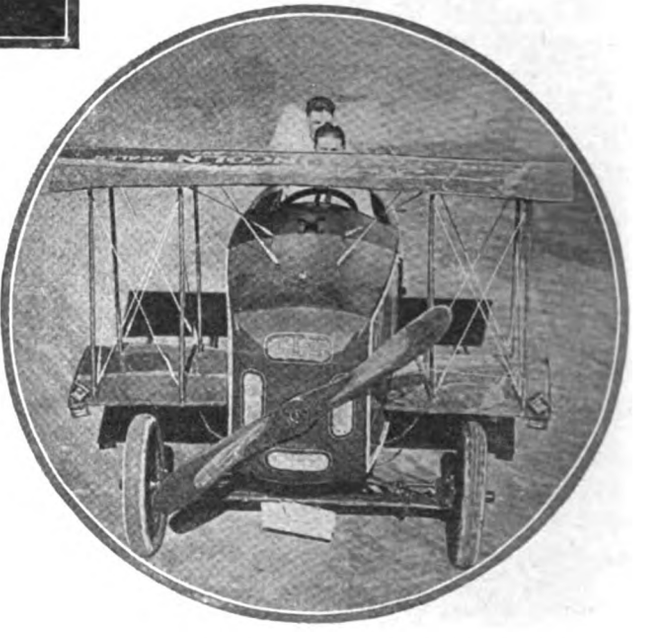
LESS GASOLINE USED; PRODUCTION GREATER

WASHINGTON, Dec. 26—The monthly report of the Bureau of Mines shows that the domestic consumption of gasoline had decreased by 18,000,000 gallons, or 3.6 per cent, during October as compared with previous month. It was, however, about 7.5 per cent above the figure for October last year.



October production of gasoline amounted to 566,278,689 gallons, the highest recorded except for last July, when this figure was exceeded by only 3,400,000 gallons. This is a daily average of 18,267,054 gallons, an increase of about 30,000,000 gallons over the September output, or an increase of 2.15 per cent in the October daily average production. The gasoline output was 28 per cent greater in October, 1922, than it was last year in the same month.

Use Garage for Tractor Course



ROCK ISLAND, ILL., Dec. 26—The garage of J. W. Schaab will be used by the Rock Island County Farm Bureau for a special tractor school course for its members from Feb. 26 to 28. Experts from the college of agriculture, University of Illinois, will have charge of the classes, which will be limited to 35. Each tractor firm in the tri-cities will be invited to exhibit a tractor for demonstration and study purposes.

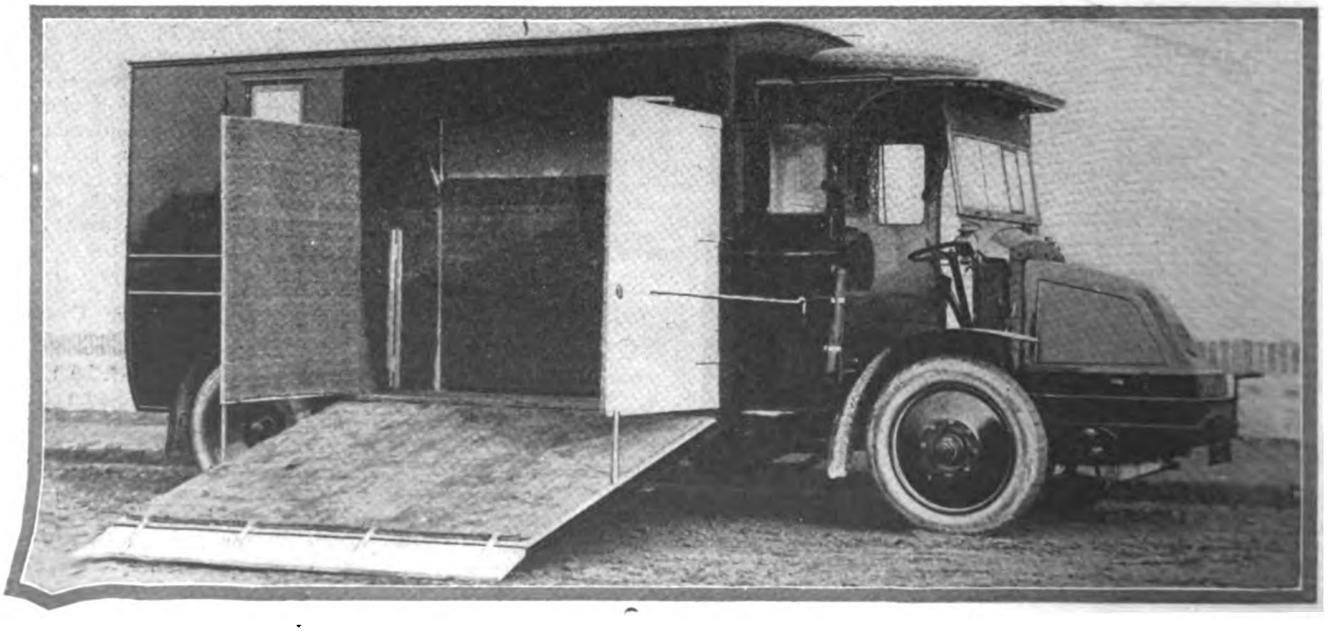
Motor World's Weekly Pictorial Review



When delegates of the Royal Automobile Club Conference, England, visited the Mechanical Works at Chiswick lately they were interested in the experiments made to prove the safety of the London buses. One of the experiments was the placing of the bus at an acutely "tipped" angle to demonstrate the amount of "tilt" that could be negotiated with safety

Ever see a flying Ford? Well, maybe not, but here's one all ready for a flight. A Los Angeles Ford dealer has built a special body on a Ford, complete in every detail, and equipped with all the necessities of an airplane, wings, tail, propeller—everything. The little car has created a lot of commotion "flying" through the streets of Los Angeles, piloted by its owner

This luxurious truck was imported from France by Joseph E. Widener for the transportation of his racing horses from one track to another, and for their stabling while at the tracks. It is a front drive model. A side of the body is hinged to offer a sloping runway. One feature is the low center of gravity

of New and Interesting Things Automotive

Chicago housewives are soon to be taught the art of cooking by means of a truck with a miniature kitchen inside and a dainty and efficient cook presiding therein, whose duty will be to go from place to place and teach housewives how to cook better food. Mrs. Christine Frederick, national food expert, is in charge of the project

Any motor car or truck can become an effective fire engine by the addition of a high speed turbine water pump placed in front of the radiator and driven direct from the crankshaft. The invention is of particular interest to small communities unable to afford more expensive fire equipment and to farmers who might buy the apparatus on a cooperative basis. Pumps of the design necessary are being made by Merio Tamini, an Italian engineer, who at the present time is selling the entire output of his factory to the Fiat company

Police departments are getting deeper and deeper into inspection of automobiles to prevent carelessness and the resultant accidents. In New York, not long ago, police officers stopped cars and inspected the brake bands. This activity may be expected to spread to other large cities

Will You Watch the 1923 State Legislatures?

Legal Editor Offers to Help Trade to Secure Better Automotive Laws if Needed

THE legislatures of a big majority of the States will convene in regular session next month, January, but to date there has been little talk about proposed garageman's lien laws to be introduced in the various States.

How will the automotive dealers benefit by the passage of laws beneficial to their business? In direct proportion to the effort they expend in attempting to have such beneficial legislation enacted into law.

Perhaps the dealers in the great majority of States where there are no really adequate laws for the protection of garagemen and repairmen are satisfied—if not it is up to them to prepare now for the introduction of new lien laws or other desired laws at the coming legislative sessions and arrange to get together to support such proposed bills.

Automotive dealers cannot reasonably expect others to back laws which will benefit their industry alone, especially if they will not take the trouble to back them themselves. If they are not willing to go to a little trouble and to some expense to secure laws which will protect them they must be willing to be classed as a rather poor lot of business men.

There is no legislation that the various legislators will not pass so long as it is reasonable and so long as there is a strong insistent demand for its passage and there is no legislation that will pass so quickly and appear on the statute books in so short a time as legislation sponsored by strong, well organized groups of responsible business men. The dates on which the various legislatures convene again in 1923 are as follows:

Alabama	Jan. ..
Alaska	Mar. 5
Arizona	Jan. 8
Arkansas	Jan. 9
California	Jan. 2
Colorado	Jan. 3
Connecticut	Jan. 3
Delaware	Jan. ..
Florida	Jan. ..
Georgia	June 28
Hawaii	Feb. 21
Idaho	Jan. ..
Illinois	Jan. ..
Indiana	Jan. ..
Iowa	Jan. 8
Kansas	Jan. ..
Kentucky	Jan. ..
Louisiana	May 3
Maine	Jan. ..
Maryland	Jan. ..
Massachusetts	Jan. 4
Michigan	Jan. ..
Minnesota	Jan. 2
Mississippi	Jan. 3
Missouri	Jan. ..
Montana	Jan. 2
Nebraska	Jan. ..
Nevada	Jan. 16
New Hampshire	Jan. 4
New Jersey	Jan. 10
New York	Jan. 16
North Carolina	Jan. 1
North Dakota	Jan. 4
Ohio	Jan. 9
Oklahoma	Jan. ..
Oregon	Jan. 8
Pennsylvania	Jan. 2
Porto Rico	Feb. 12
Rhode Island	Jan. 3
South Carolina	Jan. 10
South Dakota	Jan. 2
Tennessee	Jan. ..
Texas	Jan. ..
Utah	Jan. 8
Vermont	Jan. ..
Virginia	Jan. ..
Washington	Jan. 10
West Virginia	Jan. 10
Wisconsin	Jan. ..
Wyoming	Jan. ..

Note.—The editor will be glad to hear from individual dealers or from trade organizations in any of the above States who are desirous of submitting new bills to their various legislatures and will be glad to aid and assist them in every way possible.

Three Wise Men

ONE was sick — he consulted a doctor and became well.

One sought spirituality—he consulted a holy man and was saved.

One was in the automobile business—people owed him money he could not collect — folks browbeat him into filling demands he thought were unjust — his garage burned down and he bought a lot of folks new automobiles — his wash rack man smashed a car delivering it on the request of a customer and he paid the bill—he fixed a car for a man who didn't own it and got stung—his partner eloped with his wife and liquor — BUT THAT WAS BEFORE HE BECAME A WEEKLY READER OF THIS PAGE.

He writes frequently to the legal editor now.

He's a wise man.

Selling Without Warranty

The Supreme Court of Montana recently pointed out in a case which came up on appeal before it that parties to a contract may expressly stipulate that the property which is the subject of the contract and which is sold is not warranted.

In this case a rebuilt tractor was purchased together with other machinery and afterward an action for breach of warranty was instituted by the buyer who actually recovered judgment for $800 in the trial court.

The seller thereupon appealed the case and the Supreme Court reviewing the matter reversed the judgment of the lower court on the showing by the seller that the property had been sold without a warranty, saying, "Personal property may be sold without a warranty and parties to a contract may expressly stipulate as they did by the contract in this case that property sold is not warranted." Friesen vs. Hart-Parr Co., 209 Pacific Reporter, page 986.

Dealer's Liability in Chattel Mortgage Sale

Editor Motor World:—Will you please answer through your legal columns advising whether in Michigan a dealer who sells a car on a contract note which is virtually a chattel mortgage is liable for personal damage caused by the purchaser of the car.—A. A. Co., Battle Creek, Mich.

Answer:—In Michigan, as I understand it, a car owner is responsible for damages caused by a car owned by him unless the car was being driven at the time of the accident without his knowledge or consent. Your courts have not held like those of South Carolina have that an owner may be responsible even though the car was being used without his knowledge or consent. State vs. McClung, 233 S. W. Reporter, page 54, nor have they decided like the New York courts and the courts of most of the States have that a car owner is only responsible when a car is being used within the scope of his business, etc.

In your State (Michigan) it has been held that an owner is responsible for accidents caused by one to whom he has loaned his car.

As I see it in your State you would probably be held liable if you sold a car under a conditional bill of sale, reserving title to the car in yourself, but would not be held responsible if you sold the car, passing title to the purchaser and then took back a chattel mortgage to secure the price. My recommendation is that you take your contract to a local Michigan lawyer for examination. I would be very glad to hear what he has to say about it in view of your question.

Our Industry—As an Employer

THE automotive industry provides work for two and a half million persons. Half a million of them are employed in the car, truck, parts and automotive equipment and tire factories. Another half million are in the trade—distributors, dealers, garagemen and their sales, office and mechanical workers. Another half million are engaged in other industries from which the automotive industry buys finished or unfinished products—metals, wood, leather, rubber, glass, oil and paper. A million men are employed as chauffeurs. The families of these two and a half million workers, getting their living from the automotive industry, possibly comprise 7,500,000 persons, surely exceed 5,000,000, almost one-twentieth of the population of the United States.

Swatting Public Confidence

A DEALER recently distributed circulars offering to allow $500 "on any automobile that runs, as part payment on the purchase of a brand new car" of the make he sells. The offer was limited to about a week, expiring the last day of 1922, and indicated to the initiated that the dealer probably had a trading allowance of $500 or more from his factory to clear out quickly models to be displaced by a new 1923 line. The dealer's local public probably was not initiated to the extent that it knew the real story behind such a proposal, but people in his town would be likely to arrive at one of two conclusions, either that the car was overpriced or that the dealer had a mighty big discount to play with in used-car trading. Either conclusion not only hurts the dealer concerned but the entire automotive trade of the community.

The time is going to come when factories will abandon the weak, deceptive trading allowance and, if they must dispose of a lot of cars to be superseded, come out frankly and cut the price and tell the public why. When they do, dealers will not be tempted into practices that hoodwink the public and continue to make it difficult for the industry and the trade to win the place they deserve in public esteem.

1 Salesman—1 Dealer—1 Million

IT S a little more than a month old—the idea of Ray W. Sherman of the Automotive Equipment Association's merchandising department that if every salesman of every jobbing house would select one dealer as a subject of special assistance in merchandising accessories, a million dollars' increase in business, for manufacturers, jobbers and dealers, probably could be attained. The idea is a baby yet, but it is growing lustily and reports are coming in from all parts of the country that salesmen and dealers have set to work on this novel co-operative plan.

In most cases jobber salesmen are the prime movers. They are asking dealers to join the movement. As the campaign gains momentum we imagine some dealers will begin to ask themselves, "Why am I not in this thing?" Nobody will keep them out. Every additional wide-awake merchant who joins the campaign gives it so much additional strength, makes it so much easier to reach the million mark—perhaps pass it.

Are you the kind of fellow who could make things hum in a business-building, profit-building movement like this? Ask your jobber salesman about it.

There Are Used Car Buyers

A RETAIL dealer in the East announced several weeks ago that he was through with used cars, that he would take no more used cars in trade and would dispose of those on hand as soon as possible.

Perhaps this is one solution of the used car problem but it has two serious disadvantages.

In the first place, it has been estimated that nearly 80 per cent of the car buyers are already car owners and therefore in considering the purchase of a new car, they have also to consider the disposition of the car already on their hands. For a dealer to suddenly announce that he would take no more cars in trade would seem on the face of it to be handing business to his competitors on a silver platter.

In the second place, the used car has a definite place in automobile merchandising. Even if a dealer were to limit the cars he took in trade to those of the make he handled, he would be able, by reconditioning, to sell at a low price used cars in reasonably good condition. By properly following up such buyers from the sales and service end, he would without a doubt be able to turn

Digitized by Google

many of these used car buyers into new car buyers inside of a year.

There are many potential buyers who cannot afford a new car at present or who are a little timid about spending a considerable proportion of their savings on one. They are, however, ready to purchase a used car which would carry the reputation of the house. The new car dealer who can get their business is adding just so much to his volume and at the same time is enlarging his list of customers. His chief difficulty is to conduct the transaction at a profit. But some dealers are doing it.

Outdoor Winter and the Automobile

A DEALER wrote us a few days ago asking how he and his fellow dealers could get the motor car a little more prominently into the winter sports of his community. His town is strong for skating, tobogganing and skiing and people use their cars more or less to get to and from the scenes of these activities, but the car doesn't get into the picture in newspaper stories and 'round the fireside conversations.

What the motor car needs in this dealer's city, as in many others, is promotion as a means of greater enjoyment of outdoor winter. If skating, tobogganing and skiing races are all the rage, why not a winter motor tour, or a whole series of them, with contest features? Some dealers or dealer associations have organized winter motoring clubs, which have gone on somewhat difficult trips at times, at other times have engaged in "runs" to skating, coasting or dining rendezvous and in many ways have got winter driving talked about and written about in the newspapers.

Any such activity, while suggesting the automobile for winter pleasures, also presents it as a year 'round utility. Dealers finding a way to promote winter driving will encourage wider use of cars in cold weather, which is good business for everybody in the trade and which also increases owners' satisfaction in their vehicles. They will find eventually also a breaking of winter-time sales stagnation.

So many people rate motoring as their first recreation that it is a wonder cars are laid up even in the deep-snow country. Fewer of them would be laid up if dealers made more fuss about their availability for winter use.

The New Jersey Highway Plan

NEW JERSEY'S highway plan, which provides that construction costs be paid by all the people and the maintenance costs by the motorists, has a common sense appeal that is winning approval. Already it has been predicted that the New Jersey plan will be adopted by many other States as a means of meeting one of the great problems of the day—providing funds for the establishment of adequate State highway systems.

Practical application of the plan in New Jersey has been made possible by the approval of the voters at the November election of the $40,000,000 highway bond issue to finance highway and bridge construction over a period of five years. The law provides that every cent of the money be invested in actual construction work. The maintenance costs are provided for by receipts of the motor vehicle department.

Equally as interesting as the plan itself are the steps that are being taken to insure getting 100 cents' worth of highways for each dollar spent in construction. If this is not accomplished it will not be the fault of the Good Roads Association of New Jersey, which sponsored the movement for the adoption of the highway plan, steered it through an election to victory, and which now will assume the roll of "watch dog of the treasury" and extend its advisory help in putting the plan into operation. This association, composed of civic associations representing all parts of the State, has a membership of more than 200,000 individuals, among whom are thousands of the State's influential business men. Incidentally, its guiding spirits are automotive men.

What promises particularly satisfactory results in New Jersey is the fact that Governor-elect Silzer, who will play an important part with the Legislature in the beginning of the State's new highway program, has asked the Good Roads Association to accept the responsibility of helping to safeguard the public's interest in the awarding and carrying out of the highway contracts.

There is politics—plenty of it—in the New Jersey project, just as there is and always will be in highway building that is done under the direction of Legislatures, road commissions and others whose members owe their places in them to political forces, but the big, outstanding and important thing is that one State has hit upon a plan of highway construction that appeals to the people as fundamentally sound in principle, and behind the plan there is a strong statewide association that is pledged to help safeguard, through appointing inspectors and co-operating with the authorities, the expenditure of the people's money.

Things to Think About

THE average man doesn't get much excited about New Year's resolutions, but the average man—and most of us are—will discover, if he looks himself and his business over, that he is doing some things he shouldn't do and failing to do some others that he should do. And New Year's is about as good a time as any to get going right.

"Nobody will need to walk," says the automobile committee of Shriners co-operating in the entertainment of members of the order from all over the country in Washington next June. Eighty-five hundred local cars, added to 35,000 visiting cars, it is estimated, will do the trick. The plans are mentioned as just one more of those impressive things the motor car can do and is doing.

A dealer says you can talk continuously for two hours about an automobile without repeating. Sure can—if you know your car.

A newspaper writer says that "Owning an automobile in New York puts victim in luxury class." There seem to be a lot of peculiarly willing "victims"—in New York and elsewhere.

Wallace Page, Boston jobber, says his dealers did so well selling accessories for Christmas gifts that he's going to suggest applying the idea to birthday presents. Well, why not?

The New Year—make it snappy and it will be happy.

Manufacturers Shorten Inventory Period

STOCKS TO BE TAKEN WHILE PLANTS OPERATE

Body Shortage and Large Demand Pile Up Orders in Detroit District

DETROIT, Dec. 23—Inventory taking in a majority of factories in the Detroit district will be limited to a much smaller period of time than usually given. Few factories will close for the holiday week, the usual inventory period, and instead the stock taking will be made in a great many instances while factories are at least in partial operation, with a complete cessation only in the days at the first of the year.

This condition is particularly true of most of the car factories, all the body manufacturing companies, and of many of the parts and accessory makers. The body manufacturing end of the industry is the busiest of all in its attempt to keep abreast of the large flood of closed body orders with present inadequate facilities. Car makers are buying closed bodies wherever they can get them but they have been unable to get either sufficient or satisfactory deliveries.

Plants Behind on Closed Cars

Some factories have been down for days at a time owing to closed body shortage and this has resulted in a piling up of orders which will take weeks to cut down. One factory will not take orders on certain of its closed models for delivery in less than a month. Several factories which have gone along uninterruptedly are from two weeks to two months behind on certain closed body models; in fact the closed body type deliveries generally are running behind orders.

Sport type models also have enjoyed a large amount of popularity and these have helped materially to keep buying at higher market through the winter. Manufacturers have been frankly surprised at the volume of business that the special model cars have developed and instead of just supplying a limited demand that would help to sustain operations in the dull season, the business has assumed important proportions.

Because of the buying in closed models and sport types, both of which take considerably longer in production than the standard models, the car factories have been kept busy, though their production totals have been falling off somewhat from the earlier season. There also has been considerable manufacturing of open standard models, though these in large part have gone to storage either at dealer establishments or factory warehouses to prepare for early spring business and poor shipping conditions during the winter.

With winter weather setting in, automobile factories here are finding railroad service falling off, as was expected. The wisdom of preparing for bad shipping conditions has been borne out by conditions following the first fall of snow which resulted in several temporary embargoes affecting roads entering Detroit. Driveaways are inadvisable for the present at least and more snow will make them next to impossible.

Bad weather conditions, with the poor condition of railroad equipment following the strike, can easily result in factories here being compelled to operate low schedules for the first month of the new year. Storage facilities at the plants and city are limited, and unless it is possible to ship by freight, part time operation must follow.

Companies with well-financed dealer organizations have prepared for this to some extent, but the supply of cars in dealers' hands throughout the country is low as compared with other years and much too low to meet a long cessation of shipping.

GASOLINE TANK DROPS BUT CAR STILL GOES

MILWAUKEE, Dec. 23—The man who always gets more miles to the gallon than his neighbor, and the salesman who claims his carburetor auxiliary will cut gasoline bills in half, must look to their laurels.

From Oconto, Wis., comes the authenticated story that while enroute from Green Bay to Peshtig, Wis., W. E. Ules and a companion reached a point near Oconto when their engine gave a few gasps, popped a couple of times and then "up and died."

Investigation revealed that the gasoline tank was missing. Ules and companion promptly walked back to look for it. Four miles down the road they found the tank lying in the middle of the highway.

New Liberty Car Likely

DETROIT, Dec. 21—Plans for refinancing of the Liberty Motor Car Co. are expected to be completed this week when a new manufacturing policy may be announced under which its line will be extended to include a light six model which will sell in the $1,000 field.

RAIL RATES LOWERED FOR N. A. D. A. MEETING

Certificates Must Be Secured from Headquarters — Program Being Prepared

ST. LOUIS, Dec. 26—Business administration and other subjects of exceptional interest to automobile business men will comprise the program for the 1923 sixth annual convention of the National Automobile Dealers Association in Chicago, Jan. 27 to 30, inclusive. Through the year 1922 the National Automobile Dealers Association has had a corps of field men developing the One-of-a-Thousand program.

The program for the meeting will be devoted entirely to the subjects which the automobile dealer has said were his most troublesome problems to-day. These can be largely classed under four major subjects dealing primarily and directly with merchandising.

Conditions throughout the United States as reflected by the close contact established this year by the N. A. D. A. with the automobile merchants, indicate that 1923 will be a year in which many changes must be made in the methods of merchandising. Some suggestion of these changes will be contained in the program of the January convention.

Men of Prominence to Speak

The program will include men of national prominence in business and in the automotive industry. Details of the program are practically complete and will be ready for announcement soon.

As in former years, the railroads have made concession to the N. A. D. A. in providing special rates of fare. Certificates for the special rates must be obtained from the St. Louis headquarters of the N. A. D. A. This has been changed this year because of the difference in the membership affiliations caused by the adoption of the One-of-a-Thousand program. The membership of the N. A. D. A. embraces practically every State, and there are indications that the 1923 convention will be the most largely attended of any in the history of the organization.

New Star Rubber Sales Head

AKRON, Dec. 26—Frank P. Harrington has been named director of sales by the Star Rubber Co. Harrington has been 21 years in the rubber business. His long career includes sales connections with Goodrich, Miller and Dayton, his work with the two former organizations covering ten and nine years, respectively.

1923 Outlook Excellent, Summary Indicates

PARTS MAKERS GET EXECUTIVES' VIEWS

Car Production Is Expected to Equal That of Present Banner Year

NEW YORK, Dec. 26—The analytical survey of the automotive industry which is being made by the Motor and Accessory Manufacturers Association has reached a stage where a recapitulation of the views of the leading executives paints a picture of the 1923 outlook that is most encouraging.

Classifying these views, General Manager M. L. Heminway summarizes the outlook as follows:

1—That the 1923 outlook in the automotive industry is unquestionably good.

2—That 1923 passenger car production probably will equal that of 1922.

3—That truck production will show an increase in 1923.

4—That renewals during 1923 alone will require 1,800,000 vehicles.

5—That the re-entry of the farmers into the buying market will add substantially to car and truck sales.

6—That there will be a good export business for the automotive industry, particularly in the South American and Far Eastern areas.

7—That the financial situation in the industry during 1923 will be marked by keen competition, strengthening the well-established companies and putting the others to the final test.

8—That fundamental credit conditions will be sound and well stabilized.

9—That car manufacturers are giving greater emphasis to closed cars, sport models and light sixes.

10—That more and more accessories and devices, which in the past have been regarded as extras, are being adopted as standard equipment by car manufacturers.

As a result of this survey and his own observations during a year of close contact with the industry, Heminway has discovered that the motor industry is rapidly developing along railroad lines, by which he means that the manufacturers now realize that they are producing and selling transportation rather than vehicles or units.

Statement by Heminway

Heminway says:

To me this development indicates the destiny and opportunity of the automotive industry. More than that, the industry can adjust itself more effectively and more economically to the transportation needs of the nation because it can learn from the blunders as well as the triumphs of the railroads.

From considerable traveling about the trade during the past twelve months, I am convinced that this is the basic doctrine in the minds of the outstanding leaders of the automotive industry. Selling transportation rather than vehicles or units, makes for the railroad mind, as I regard it—thinking in terms of distance annihilated, production and distribution costs reduced and the scope of commercial and social life enlarged.

Dealer Worked in 1922 to Insure His Future, Says "Tom" Hay of Chicago in New Year Message Sent to Trade Body of Which He Is President

CHICAGO, Dec. 25.—In his message for the new year sent to the members of the Chicago Automobile Trade Association, President Thomas J. Hay says, in part:

"Here is the great business lesson of this year.

"During the gloomy months every dealer was on his toes trying to sell cars. It was a buyer's market and the buyers realized it. Whenever tips on prospects were secured, dealers followed them up immediately. Prospects were likened to gold nuggets—and gold nuggets they proved to be this year.

"During this struggle for business we were all building for the future, whether we realized it or not. We were laying the foundation for better business this year and were paving the way to better business in 1923. Many prospects obtained in 1921 were converted into buyers in 1922.

"In other words, we were insuring our future—and this is what every successful business does.

"Now that we are passing into another year, let us continue the building up policies that we pursued in 1921. Regardless of conditions, let us follow up every prospect as if our very existence depended upon it. Let us improve our businesses wherever possible—our sales forces, our service stations, our office forces—in fact, our entire organizations.

"Nineteen hundred and twenty-two has been one of the most successful years in the history of the automobile business. Let us all resolve to make 1923 a still better year. Conditions are favorable. The rest is up to each and every one of us."

EVERY SIXTH PERSON IN OREGON OWNS CAR

PORTLAND, ORE., Dec. 26—Registration of automobiles in Oregon has now exceeded 133,000, and it is estimated there is now one automobile for each six persons in the State. Such was the report this week by the state traffic department, the figures covering the present year up to Dec. 1.

At that time, according to the report, there had been registered during 1922 a total of 133,816 motor vehicles, 3203 motorcycles and 541 automobile dealers. The figures on automobiles and trucks, which are combined carried together and not segregated in the figures, show a gain from 118,169 registered at this time last year, or about 13 per cent. It is estimated that total registrations by the end of the year will reach 135,000.

With the present registration, figuring 800,000 population for the State of Oregon, this State now has one automobile for each six people. This places the State well to the front in this regard among the States of the Union.

IOWA IS CONSIDERING LOWER LICENSE FEES

DES MOINES, Dec. 26—Among the legislation which is scheduled to be introduced at the coming session of the Iowa Legislature which meets in Des Moines early in January are a number of bills which will have a direct bearing upon the motor trades industry of the State.

One of the most important in its bearing announced thus far is a bill which will be fathered by Secretary of State Ramsey and the State automobile department which seeks to make a material reduction in the license fees.

Iowa now stands almost at the top among the States of the Union in the amount of money paid by motorists in license fees.

Another bill which will be watched closely is one now under draft by officials of the Iowa League of Municipalities, an organization of city officials, looking toward regulation of buses.

Duplex Not to Expand Line

DETROIT, Dec. 26—Officers and directors of the Duplex Truck Co. were re-elected at the annual meeting of stockholders. Plans which the company was considering for broadening its field of manufacture have been abandoned, and operations will be confined to building the Duplex line of trucks as formerly. The company is planning an active selling campaign for the year.

STUDEBAKER RUSHES WORK ON NEW UNITS

Company Is Figuring on Turning Out 600 Automobiles Daily Next Year

SOUTH BEND, IND., Dec. 26—Figuring on a production of 600 cars a day during 1923—325 a day at South Bend and 275 at Detroit—the Studebaker Corp. is rushing to completion several additional factory units, of which five are in South Bend and two in Detroit.

When completed these buildings will add over 1,000,000 sq. ft. of floor space, bringing the total manufacturing floor space of all plants to 7,100,000 sq. ft. and the cost to $41,000,000. All of these buildings are well under way and will be completed shortly after Jan. 1.

At South Bend the first new unit is a four-story building 172 ft. x 518 ft., an addition to the present Light-Six closed body plant. When completed this plant will consist of one great building 172 ft. x 769 ft., four stories high, devoted entirely to the production of closed bodies for the Light-Six model, and will allow for the production of 150 bodies a day.

Enlarging Assembly Building

The final assembly building at South Bend is being enlarged by a four story addition 72 ft. x 246 ft., this space being required for the increased production. To the stamping plant has been added a one-story extension 96 ft. x 100 ft., allowing for additional capacity of steel stampings.

Facilities for storing and shipping completed cars are handled in the new four-story building 76 ft. x 624 ft., which parallels the final assembly building and which is adjoined by an inclosed train shed 80 ft. x 624 ft. The storage building provides storage space for 1000 finished cars and all shipments will be made indoors. The court between the storage building and the final assembly building will be glass covered, affording greater capacity for final inspection of cars.

The last new unit at South Bend is an addition to the powerhouse, 48 ft. x 116 ft., two stories high. In it will be installed 16,000 kw. power generating equipment of the latest type, which will supply all of the electric power required by the South Bend plants.

Two Units in Detroit

In Detroit there will be two units, one of which will be a five-story building, 58 ft. x 441 ft., for the final assembly and testing departments. The second unit will be a four-story building, 95 ft. x 248 ft., which will be used for various machining operations and stores.

All of the new buildings are of reinforced concrete construction, fire-proof and with equipment of the latest and most advanced design, much of it especially built to permit of economies in the manufacture of Studebaker cars. An interesting feature in connection with the expansion program is that the new buildings are being constructed and equipped with a minimum interruption to operation.

While concrete is poured on the upper stories, machinery and equipment are installed in the lower floors. When the South Bend factories were first planned six years ago, they were designed with the idea of increasing production without interfering with operation. In laying out machinery, spaces were left alongside machines installed, for others that would be required as the output of cars mounted.

The corporation has just completed the erection of a concrete and steel service building three stories high and 143 ft. x 148 ft. located in Cleveland. This is a model building in every respect. The most advanced ventilating and lighting systems and equipment of all kinds have been installed throughout.

The Winton building four stories high and with a total floor space of over 51,000 sq. ft. on the corner of Broadway and 70th Street, New York City, is now being remodeled as a Studebaker sales room.

In Brooklyn, the corporation has let contracts for the erection of a new sales and service building four stories high and 173 ft. x. 191 ft. Contractors expect to have it ready for occupancy shortly after the first of the vear. An additional building 175 ft. x 200 ft., five stories high is being erected on West 131st Street, New York City.

These service buildings are necessary to render proper service to Studebaker owners in the Metropolitan district.

YOUNGEST CAR THIEF FOUND IN MILWAUKEE

MILWAUKEE, Dec. 22 — The world's youngest automobile thief has been apprehended in Milwaukee. He is just a month older than 10 years, and the police give his name as Georgie Kusch. He was caught after a hot chase by two motorcycle officers, who followed him about three miles along city streets and finally cornered him on the North Avenue viaduct.

During most of the wild journey Georgie maintained a speed of 40 m.p.h. Two boys, one 14 and the other 16, occupied the rear seat. At the police station, Georgie readily admitted his crime and said, "Sure, I stole the car. How can a feller learn to drive when he's got no car? I can't buy any so I just took one. I've taken 'em before."

Holds Individual Show

ATLANTA, Dec. 26—Ten new cars sold in a single week as a result of an individual winter automobile show was the record achieved by D. C. Black, Buick dealer and president of the Atlanta Automobile Association, the early part of this month.

N. A. C. C. PREPARES FOR TRUCK MEETING

Four Speakers Will Present Papers at Gathering to Be Held January 11

NEW YORK, Dec. 26—Problems of the truck industry will be thoroughly threshed out at the general meeting of the motor truck members of the National Automobile Chamber of Commerce, called for Thursday, Jan. 11. The call for the meeting has been sent out by General Manager Alfred Reeves of the N. A. C. C., and it is expected that there will be an attendance truly representative of this branch of the industry.

A tentative program has been prepared and subjects for discussions and papers settled upon, but the list of speakers is not ready for announcement. The meeting is scheduled to start at 10 o'clock in the morning at N. A. C. C. headquarters. There will be two papers discussed in the morning and two or more in the afternoon, Chairman Windsor T. White of the truck committee presiding.

The four leading papers will be on the following subjects:

What is wrong with the motor truck industry?

How can manufacturers and dealers co-operate to make truck paper more attractive to the bankers?

Is there need for a terms committee similar to that in other industries where deferred payments are a factor in sales?

Best methods for finance companies to handle truck sales, including the length of time truck paper should run.

Other subjects include: Parts makers' service stations and their relation to local dealers, national users and retail customers, and the proper relation of the parts manufacturer with the manufacturer of motor trucks.

FRANKLIN SCHEDULE CALLS FOR 50 DAILY

SYRACUSE, Dec. 23—Production of Franklin cars for 1923 calls for 50 cars a day, which, if reached, will be the biggest in the history of the H. H. Franklin Manufacturing Co. During the first quarter it is expected that 3525 cars will be built.

It is also announced that the local plant will not close down for the usual 10-day inventory period, in order that production may be maintained. The heavy demand for cars and the fact that shipments of bodies are nearer normal is given as the reason for the omission of the inventory shut down.

J. W. White to Develop Disk Wheel

BUFFALO, Dec. 26—The Wire Wheel Corp. of America has assigned to J. W. White the development of the disk wheel with which the corporation is broadening its manufacturing and distributing organization.

Digitized by Google

DEALERS ORDER TIRES AS PRICE TALK GROWS

Manufacturers Well Booked for Spring Delivery—Akron Still Holds Off

AKRON, Dec. 23—That next spring will usher in the greatest era of prosperity and expansion the tire industry has ever known, according to Akron tire manufacturers, is indicated by the fact that practically all tire-producing companies in the Akron district to-day have booked for spring delivery from 25 to 50 per cent more business than they had on their books a year ago at this time.

Every Akron tire plant is increasing production steadily in order to build up finished goods inventories and have a sufficient reserve supply of tires on hand to meet an expectedly heavy demand in the spring.

It is estimated that tire production soon will be back to 100,000 casings a day in Akron, and some manufacturers would not be surprised to see the gross tire output mount to 125,000 casings a day by early spring.

Talk of tire price increases has greatly stimulated current sales, for many dealers are getting orders in now before the prices are boosted.

Waiting for Movement to Start

All Akron companies are "sitting tight" as to price boosts, but some admittedly have new price schedules already printed. All that is needed is for some one company to start the movement and the rest will be quick to tumble into line.

Manufacturers here say that unless the Stevenson act, passed by England and providing a graduated tax on all crude rubber exported, is either rescinded or modified, it will heap a burden of $100,000,000 upon rubber manufacturers in America next year, and that most of this will have to be passed on to the tire user, resulting in much higher prices.

The only remedy they see is to have Congress pass legislation making possible and encouraging the use of American capital in financing the establishment of rubber plantations in the Philippine Island where climatic conditions are akin to those in the rubber producing belt of Sumatra; and also to induce South American Republics to grow rubber trees so that supplies may reach this country and can avoid the British export tax.

Cadillac Sales Gain After Cut

DETROIT, Dec. 26—Cadillac sales in the first week after a recent price cut showed an increase of 22 per cent and on the second week 90 per cent, according to reports received by Lynn McNaughton, general sales manager, from distributors in all parts of the country. Deliveries the first week amounted to 60 per cent and improved 150 per cent in the second. Production now is running over 50 per cent in closed cars, McNaughton said, but many buyers are coming into the market for open cars in anticipation of waiting lists in the spring.

FEWER CARS STOLEN IN PORTLAND, OREGON

PORTLAND, ORE., Dec. 26—Automobile thieves are finding it harder and harder to ply their trade, judging from the annual report of the Portland Chief of Police, covering the 12 months ending on Nov. 30, 1922.

During that period, says the report, a total of 516 automobiles were stolen, of which 490 were recovered, leaving a percentage not yet found of but 5.3. In addition 13 cars stolen prior to this year were found and returned to their owners, while 16, stolen in other parts of the country, were found and returned. A total of $523,982 was represented in the thefts, about half of which was covered by insurance, it was reported.

GRAY WILL EXHIBIT NEW SEDAN AT SHOWS

DETROIT, Dec. 23—Gray Motor Corp. will exhibit a new four-door sedan at the New York and Chicago national shows for the first time anywhere, and in addition will display for the first time the complete Gray line of roadster, phaeton, coupe and coach. The price of the coach has been increased from $760 to $785. The coupe, which is now being shipped, is $715.

H. W. Burritt, formerly special tax counsel for all Ford Motor Co. interests, has been made secretary and assistant treasurer of Gray, being directly associated with President F. L. Klingensmith. L. R. Martell, formerly production manager at Gray, has been made commercial manager, working in the sales department with D. Henry Bonner, sales manager. The advertising and service departments have also been brought under the direction of the sales department. Shipments to Canada for distribution through the sales organization of the Gray-Dort company are now going forward in considerable volume.

The following distributors have been added by Gray: R. E. Jordan, Dallas; Montana-Haynes Motor Sales Co., Butte; M. L. Graham Co., Salt Lake City; Taylor A. Faulder, Sydney, Ohio, and C. J. McKinney Co., Laredo, Tex.

Planning New Building

KNOXVILLE, TENN., Dec. 26—A new building to cost approximately $80,000 to $100,000 will be constructed in the near future in this city by the Cherokee Motor Co., Studebaker distributor, as a sales and display room and service station. it is announced by Claude C. Reeder, president of the company.

FORD HOUSTON HEAD ON TOUR OF MEXICO

Looking Out for Sales Possibilities—Will Study Economic Conditions

DETROIT, Dec. 23—R. S. Abbott, manager of the Houston branch of the Ford Motor Co., is now in Mexico on an extensive trip during which he will visit all Ford distribution sources in the country. Particular attention will be paid to sales possibilities to decide what will be necessary to increase business throughout the republic. Endeavor will also be made to educate the people on the use of the Ford products for their special requirements.

The trip is practically a duplicate of one taken a year ago. Abbott will travel south to the Isthmus of Yucatan and west as far as Sangeronimo. Economic conditions will be studied separately and compiled individually by states. A considerable part of the time will be spent in Mexico City.

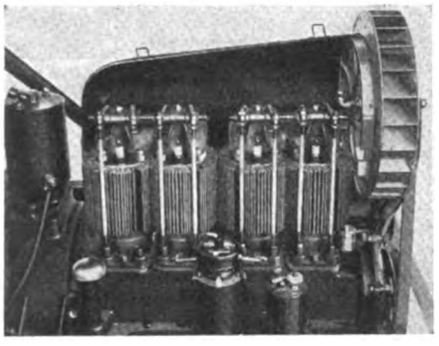
The Houston plant of the Ford company exports all cars shipped to that country. It is the intention of the company to locate an assembly branch in Mexico when economic conditions are considered satisfactory. Abbott's investigation, though fundamentally designed to increase business of the Houston plant, will also provide information on developments in Mexico and is a link in the company's plan of manufacture. This development, however, is declared still some distance away.

PRICES OF USED CARS AT LOW MARK IN IOWA

DES MOINES, Dec. 26—According to a study just completed by S. P. Whiting, secretary of the Motor Trades Bureau of the Des Moines Chamber of Commerce, prices of used cars in November reached the lowest mark in the history of Iowa motor markets.

Whiting bases his conclusion on a survey of the weekly sheets covering used car transactions of the Des Moines motor dealers, supplemented by special reports from the leading dealers of central Iowa. Six representative makes were used in making the investigation.

The survey reveals that reduced prices of new cars through lower priced material and keener competition was one of the principle reasons for the drop in used car prices. It also shows that every decline in new car prices has been accompanied by an even sharper cut in used cars.



Another reason given for the new low mark by Whiting is that the present methods of financing purchase of new cars by manufacturers and motor financing companies has worked to a decided advantage for the new cars as it gives the purchaser a plan for buying a car with a down payment no larger than the price of a used car.

CHEVROLET PRODUCES COPPER-COOLED CAR

Line to Be Marketed With Superior—Touring Model to Sell for $725

FLINT, MICH., Dec. 22—The copper-cooled car which has been in process of development by the General Motors Corp. in its research laboratory at Dayton, Ohio, is now in production at the Chevrolet plant. It will be marketed as a Chevrolet and will sell along with the Chevrolet water-cooled Superior Model, which will be continued. Deliveries are already under way and some dealers have received cars.

The new copper-cooled Chevrolet engine

For more than a year considerable interest has been created by the fact that General Motors was developing an air cooled car. The most radical change from conventional practice is to be found in the engine, which is air cooled through the medium of copper fins which are electrically welded to the cast iron cylinders so that full advantage can be taken of the superior heat conductivity of the copper.

The cylinders are manufactured in Dayton, the copper fins being made in special machines which form them into shape and give the necessary height for clearance between cylinders and at points at which the push rods come, thus making a continuous band of copper around the cylinders. The bore is 3½ in. and the stroke the same. There are four cylinders. Cooling is by air suction from a centrifugal type fan.

Five Body Models

In appearance the new Chevrolet is similar to the Superior, but practically none of the parts are interchangeable. Five bodies are furnished, roadster, touring car, coupe, sedan and sedanette, and the price will be just $200 more than the Super, or $725 for the touring car.

Aside from the engine, the chassis follows conventional lines in general. The electrical equipment is Remy, the carbureter a Carter and the universals Mechanics Machine. The clutch is a dry disk and the gearset of the three speed type. The service brake is on the rear wheels and the emergency brake on the rear end of the gearset. Propulsion is through the springs and torque is taken through a torque arm. The springs are quarter elliptic all around. The wheelbase is 101 in., touring car weight 1670 lb., and gear ratio 4.44 to 1.

A complete illustrated description of the new General Motors copper-cooled Chevrolet will appear in the Jan. 3 issue of Motor World.

PIERCE-ARROW GIVES CORCORAN PROMOTION

BUFFALO, Dec. 27—Laurence E. Corcoran has been named general sales manager of the Pierce-Arrow Motor Car Co. He has been associated with the Pierce-Arrow company for 17 years, and for the last two years has been passenger car sales manager. Corcoran will have complete direction of merchandising and distribution of both passenger cars and trucks.

Immediately in charge of car selling will be Thomas J. O'Rourke as car sales manager. O'Rourke has been associated with the passenger car sales division of the company for 16 years. Robert C. Patten, who for several years has been truck sales manager, has been appointed executive in charge of the development of sales of fleets of trucks to national users.

The promotions are made at the height of one of the most successful selling seasons in the history of the company. Results for the last six months of the year show that passenger car sales have increased 90 per cent over the figures of the same period a year ago, while the leap in truck shipments for the same period totals 65 per cent.

FORD WILL CONSTRUCT PLANT NEAR CHICAGO

DETROIT, Dec. 22—Ford Motor Co. has announced its intention of building a $6,000,000 plant near Chicago. The location selected is at Hegewisch, on the Calumet River and Nickle Plate Railroad. It will be a four-unit plant, each unit of which will cost $1,500,000, the first one to be in operation by next May. Sixteen thousand men will be employed at the start.

Ford company officials state this is the first step of a program of expansion planned, which will be one of the greatest industrial developments the world ever has seen, including, as it does, a great industrial plant at New Orleans, a unit at St. Louis and water power development at St. Paul. Ford denies he has any intention of withdrawing from Detroit.

Detroit Air Cooled Shows Car

DETROIT, Dec. 22—The Detroit Air Cooled Car Co. is displaying a sedan model in its showroom in this city as part of its display at the Hotel Commodore during the national show week. The company is planning to build about 1000 cars in 1923 at the factory recently acquired in Wayne.

OLD TIME SALESROOM IS DEPICTED IN SKIT

Suddenly Scenes Fall, at Chevrolet Meeting, Showing One of Modern Type

INDIANAPOLIS, Dec. 26—The Chevrolet zone meeting held here for all Chevrolet Indiana dealers and for many from Ohio, Illinois and Kentucky was attended by 250 Chevrolet representatives and the Chevrolet band. "Service, More Service and Yet More Service" was the theme of the talks led by Colin Campbell, general sales manager of the company.

At the evening session a skit was staged incident to the banquet, entitled "John Martin, Auto Dealer, Undertaker, Justice of the Peace, Dispenser of Gasoline and Accessories."

A compact stage all set disclosed, when the curtains were drawn, an automobile store in a country town, the walls pock-marked with all manner of signs setting forth the various endeavors of said John Martin, together with posters of events past, present and the future at the Opera House for which John got tickets in return for the space. It looked as real as some accessories-loaded windows with their scores of signs all fighting for attention.

When the scene opened, Martin was back, but his sign said "Out." The interviewer in the person of Earl Dawson, district sales manager, hit off the utter futility of the place as a salesroom or store, and finally persuaded the "dealer-undertaker-justice-of-the-peace and dispenser-of-gasoline-and-accessories" to push the brick walls over and clean house.

Martin finally stripped the walls, disclosing a well ordered establishment with but one sign and clear windows showing the Chevrolet looking through the glass, and a well supplied stock of parts and accessories at one side. Even John Martin looked surprised at the improvement.

It may sound very simple, but it made a hit, and from remarks heard afterward, it is judged that some dozens of junk signs have since been lifted from dealers establishments in this zone.

CONNECTICUT TRUCK ROAD TO BE URGED

HARTFORD, CONN., Dec. 26—State Highway Commissioner Charles J. Bennett will recommend to the Legislature which convenes Jan. 3 the construction of the special highway for the exclusive use of motor trucks, extending from Bridgeport, Conn., to the New York State line which has been under discussion for some time.

The proposed truck route is about 30 miles long, and a highway 22 ft. wide and would require an appropriation of about $1,500,000. One of the plans suggested to meet the expense of maintaining this route is a tax of two cents a ton-mile, which would bring in a revenue of about $280,000 annually.

New York May Follow Boston Used Car Plan

ADOPTION PROBABLE WITH TURN OF YEAR

Meeting Held to Consider Proposition—Brooklyn and Newark in Movement

NEW YORK, Dec. 22—It seems fairly certain that early in the new year automobile merchants of the Metropolitan territory will be handling used cars under a co-operative plan. There is every indication that New York, Brooklyn and Newark, N. J., will adopt the essentials of the Boston plan.

Newark already has its co-operative plan under way. A large majority of dealers of the New Jersey metropolis joined the movement at a meeting a little over a month ago and selected George Smith, a former Newark dealer, as secretary. The Newark used car valuation book is in the hands of the printer and with its appearance the plan of dealer co-operation will be in full swing.

Brooklyn dealers have had several meetings at which co-operation was virtually decided upon, though final action was deferred pending consideration of the subject by the Automobile Merchants Association of New York.

The New York dealers to-day heard the story of the Boston plan told by L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, who had previously described the work at meetings in Newark and Brooklyn. The board of directors of the New York Association had investigated the plan before the meeting was held and will take final action in the near future. From the sentiment indicated at the meeting it seems certain that action will be favorable.

The New York meeting was attended by a majority of the larger branch managers and distributors, with Lee J. Eastman, president of the Packard Motor Car Co. of New York and president of the association in the chair.

The Boston plan, with slight modifications, already is in operation in Philadelphia, Baltimore, Syracuse and a number of other cities.

Tire Prices Increased

TRENTON, N. J., Dec. 21—Empire Tire & Rubber Corp. and Murray Rubber Co. have announced a 12½ per cent increase on tire prices and a 15 per cent increase on tubes, effective, Jan. 1.

Cuts Down Show Program

PHILADELPHIA, Dec. 26—The show committee for Philadelphia's twenty-second annual automobile exhibition at the Commercial Museum, Jan. 13 to 20, inclusive, has decided to eliminate an elaborate program and substitute therefor a four-page, pocket-size folder, showing the floor plan and list of exhibits.

Paul M. Swisher, a graduate of the Pennsylvania Museum School of Industrial Art, was declared the winner of the show poster design. He was the winner also at last year's poster contest.

GRAY TRACTOR NAMES SYKES GENERAL HEAD

MINNEAPOLIS, Dec. 22 — George Sykes, whose extensive selling experience has made him familiar with the problems which tractor distributors and dealers are facing, has been appointed general manager of the Gray Tractor Co. of this city.

The acquisition of Sykes will not change the personnel of the organization, Gray continuing as president; H. D. Dodge in charge of sales, and George Bird as branch manager of the Wichita office. The management of the Gray Tractor Co. of Canada, Ltd., remains in the hands of Albert Prugh and James Letham.

MILBURN IS OFFERING NEW RUNABOUT MODEL

TOLEDO, Dec. 26—Milburn Wagon Co. has developed a two passenger electric runabout which may be described as a cross between a coupe and a roadster.

The standard model 27-L, five-passenger brougham shows many improvements in both workmanship and performance. Additional battery capacity is provided with a heavier duty motor, while equipment includes snubbers, Alemite lubrication and all instruments necessary to insure intelligent and easy operation.

Supplementary to this model, the Milburn is also offering a four-passenger coupe mounted on the same chassis as the 27-L. This vehicle, which is designated as model 27-F, presents a staggered interior seating arrangement, the driver's seat being set forward in the same manner as in three-passenger gasoline car coupe design. An additional auxiliary seat is mounted forward on the right side, directly under the front window, thus permitting a total seating capacity for four passengers.

H. H. Hewitt Dies

BUFFALO, Dec. 24—Herbert H. Hewitt, founder and president of the Hewitt Rubber Co. which manufactures Hewitt tires and mechanical rubber goods, died here to-day. He was born in Detroit 67 years ago and as a youth entered the employ of the Pullman works in Chicago and soon became manager. He came to Buffalo 20 years ago.

AIMS TO STANDARDIZE METHOD OF FINANCING

Association in Chicago Prepares Schedule for Selling of Automobiles

CHICAGO, Dec. 23—A move toward standardization of practices in the financing of retail sales of automobiles on the deferred payment plan has been made by the Central Auto Finance Association, with headquarters in Chicago, which is preparing to send out to the trade a circular defining certain conditions and restrictions which are to be observed.

The circular sets forth the following conditions:

For new passenger cars, open and closed, notes are to have a maximum maturity of 12 equal monthly payments.

For used passenger cars, open and closed, the minimum down payment must be 50 per cent of the time price and notes are to have a maximum maturity of 10 equal monthly payments.

Cars sold as demonstrating cars, because of insurance restrictions, will be treated as used cars and are subject to the used car terms and rates.

The financing of used cars will be restricted to cars not more than four years old, as per conference insurance rulings.

No deals involving hold-outs, reserves or infractions of the foregoing can be accepted.

The circular emphasizes the statement that the monthly payments must be equal and from members of the association, it is learned that the reason for this is that in a good many cases where payment of the balance in 12 equal monthly installments would require a monthly sum beyond the means of the buyer it has been the practice to accept 11 small notes with a large one at the end. This practice is frowned upon by the association as a poor business method.

Although the circular does not state a minimum down payment on new cars the members of the association generally require not less than one-third of the time price.

Tennessee Tire Makers

MURFREESBORO, TENN., Dec. 26—The Tennessee Rubber Co. has been organized here to engage in the rubber and tire manufacturing business. Incorporators are A. D. McKnight, W. S. Winn and James M. Butler.

Distributor Leaves for Coast

BALTIMORE, Dec. 26—H. D. Howell, for many years representative of the Reo organization in this city, was tendered a farewell dinner last week by more than 100 of his friends in the trade. Howell will make his future home in California.

BODY BUILDERS WORK WITH LITTLE LET-UP

Only Brief Interruptions to Come During Holidays—Busy on Closed Types

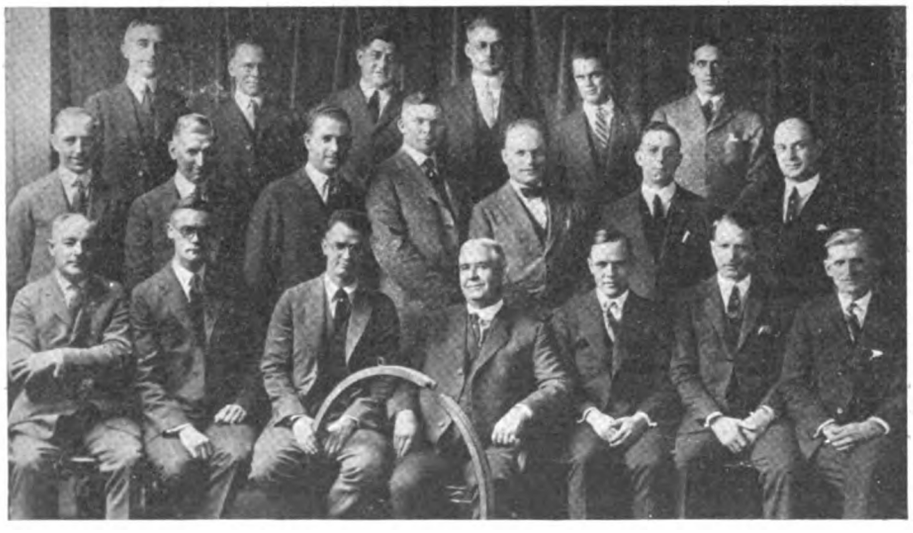
MILWAUKEE, Dec. 26—More regular employees are at work in Milwaukee automotive industrial shops this week than probably ever before in the period between the holidays. Ordinarily the layoff for the year-end begins on the day before Christmas and sometimes does not end until Jan. 8, the extra week being for inventories, but this year most shops are too busy for the customary extended recess.

Body shops are especially busy, and the local plants specializing in closed types are working at top speed, with only brief interruptions over Christmas and New Year's Day. Very little is going into stock, as most shops are not yet caught up with current orders. On open types of bodies, production is going forward, too, but the main effort is to satisfy shipping instructions on coupe and sedan bodies.

Advance orders for passenger car units, including engines, frames, axles, gears, etc., held by Milwaukee shops are liberal, and while shipments this week are expected to aggregate rather light and will be next week as well, instructions are expected which will mean a resumption of heavy deliveries about Jan. 8 or 10.

The uncommon situation exists that several dealers in Milwaukee will carry over some unfilled orders into the New Year. Ordinarily by the middle of December all deliveries have been made and the year's business is virtually at an end. In the present instance the unfilled business is almost entirely in coupe and sedan types.

TRAINLOAD SHIPPED TO SOUTH BY DURANT



ATLANTA, Dec. 22—A special Atlantic Coast Line train reached Augusta, Ga., Dec. 15 by way of Richmond, Va., from New York, consisting of 40 cars loaded with 188 Durant and Star automobiles consigned to southeastern dealers, and said to be the second largest trainload of automobiles ever shipped in the United States. It was the largest trainload ever sent to the South.

Eight of the freight cars were consigned for distribution from Augusta, seven each from Columbus, Ga., Atlanta and Knoxville; six from Macon, three from Montgomery, and two from Mobile. The Atlanta distributor states that every one of the Durant and Star cars contained in the shipment were sold before leaving the factory.

Honor Dodge Representative

BOSTON, Dec. 26—Hallock Drake Day, New England district representative for Dodge Brothers, was tendered a surprise dinner here on the eighth anniversary of his taking charge of the territory. It was held at the Copley Square Hotel, and about 75 guests were present from all over New England. Special floral pieces were sent to Day's office and to his home. At the dinner he was presented with a handsome hall chime clock. C. S. Henshaw, Boston distributor, arranged the affair, assisted by members of his sales force.

Piston Ring Men at A. E. A. Convention

A number of executives and district managers of the No-Leak-O Piston Ring Co. attended the recent convention of the Automotive Equipment Association held in Chicago. Reading from left to right, front row, they are: W. G. Sparling; L. G. Matthews, treasurer; J. E. Norwood, Jr., factory manager; J. E. Norwood, Sr., president; C. M. Swaim, R. G. Bowman and C. E. Stevenson. Middle row: E. L. Bixby, J. G. Cochrane, H. L. Strasburger, P. R. Acton, sales manager; F. A. White, assistant sales manager; B. C. Beisel and J. P. Hardesty. Back row: L. E. Malican, J. W. Van de Grift, F. B. Archibald, P. H. Briggs, H. M. Vercoe and L. R. Vercoe, Jr.

350 DEALERS HEAR TALKS ON TRACTORS

Representatives of Manufacturing Companies Appear Before Iowa Meeting

DES MOINES, Dec. 26—Over 350 implement and tractor dealers attended the twenty-seventh annual convention and exposition of the Iowa Implement Dealers Association held here. Exposition space at the Coliseum was let to more than fifty exhibitors.

Guy H. Hall of the National Institute of Progressive Farming gave a heart-to-heart talk to the dealers, outlining the work of the Institute and explaining how its work toward progressive farming benefited the individual dealer. David Darragh of the Hart-Parr Co. made a talk on "Crop Assurance" in which he explained the tractor's position in the agricultural world.

C. S. Brantingham of the Emerson-Brantingham Co., F. R. Sebenthal of Eau Claire, Wis., and Tom Witten of Trenton, Mo., spoke on subjects of dealer interest. Margaret Boylon of Kansas City led the convention singing which was a feature of each session of the convention.

J. H. Hogen of Waukon, Iowa, was elected president of the association for the coming year. C. H. Chase of Sioux City was named vice-president, and T. F. Wherry of Des Moines was re-elected secretary.

Although the attendance was not as great as was expected, many dealers expressed the belief that the convention was better from every standpoint than any previous meeting of the Iowa association.

MOTO-METER REPORTS HAVING BANNER YEAR

NEW YORK, Dec. 23—The annual sales conference of the Moto-Meter Co., Inc., has been held at the factory in Long Island City. District sales managers and field representatives from all territories are present for the purpose of making plans for the coming year.

It was announced at the meeting that the sales for the first six months of 1922 exceeded the entire sales for the previous year, and that those for the entire year more than exceeded any previous year in the company's history.

Oshkosh Tractor Receiver

MILWAUKEE, Dec. 26—Miss Alma Barry, attorney, has been appointed receiver of the Oshkosh (Wis.) Tractor Co. in a friendly action brought in the Milwaukee County Circuit Court.

Van Kerr Schedule

CHICAGO, Dec. 22—Van Kerr & Co., bankrupt manufacturer of intensifiers for spark plugs, has filed a schedule in the United States District Court giving liabilities as $87,712 and assets as $3,293.

PROTEST CAR SEIZURE FOR CARRYING LIQUOR

Dealers in Portland, Oregon, Aroused by Federal Policy of Confiscation

PORTLAND, ORE., Dec. 26—Protest against the Federal policy of confiscating automobiles used to carry liquor, even when not the property of the person involved in the law violation and used without the consent or knowledge of the actual owner, has been voiced by the Automobile Dealers Association of Portland, in the form of a telegram to the National Automobile Dealers Association.

The action came after one of the dealers had lost an action in Federal Court in which a car that he was selling on the installment plan was involved. This has occurred several times in Portland recently, despite the fact that the automobile dealers take every possible precaution against selling to those who may become engaged in illicit liquor trade.

Cites Railroad Car as Example

Ralph J. Staehlig, secretary of the association, says, in discussing the stand of the Portland dealers:

The automobile men cannot see why the automobile should be singled out for confiscation when it has been a liquor carrier, in cases in which the operator is in no sense the owner or direct agent of the owner of the car. To be consistent the courts should confiscate every Pullman car in which liquor is found. The dealer, who is in no sense a party to the violation of the prohibition laws, feels that he is entitled to greater protection than the courts give him.

Portland automobile dealers take every precaution against selling automobiles on time to bootleggers. Before a man can buy an automobile on time payments from any Portland house member of the association he is made to fill out a financial statement that requires responsible references. This statement was prepared with the assistance of two local bankers, and calls for bank references.

In response to the wire from the Portland association the N. A. D. A. responded that it is fully aware of the condition and is studying ways and means of securing relief.

KENTUCKY TRUCK MEN SEEK REPEAL OF LAW

LOUISVILLE, Dec. 26—An organization has been formed by the Truck Operators' Association to take legal steps to repeal the load limit law which is now effective.

It is claimed by the association that this law practically puts all trucks of more than 2-ton capacity out of commission for four months of the year and thereby increases the cost to the farmer.

The case of Charles W. Nally, Cox's Creek, was cited by the association. Nally runs a dairy at that point and supplies Louisville milk dealers. Under the law, Nally will be compelled to use the railroad with increased hauling charges. It is said that the law will force more than 1000 farmers to resort to railroad shipments to deliver their produce to the market, instead of large trucks.

The association plans a state-wide campaign to have the law either amended or repealed. Officers elected were: President H. C. Kelting of Louisville; secretary, Herman Cotton of Louisville, and treasurer, Arthur Weber of Louisville; executive committee, L. W. Gibbs of Frankfort, J. E. Lloyd of Louisville and W. R. Crume of Springfield.

Receiver for Saxon

DETROIT, Dec. 26—David C. Bayne, secretary of the Saxon Motor Car Corp., has been named receiver of that company, Judge Tuttle directing, in the court order, that he shall take care of the service parts for Saxon owners.

Busy Times Scheduled for New York and Chicago While National Shows Are Being Held in Those Cities Under the Auspices of the N. A. C. C.

NEW YORK, Dec. 26.—Events taking place during the national show weeks in New York and Chicago are announced as follows:

NEW YORK

Jan. 6-13—National Automobile Show, Grand Central Palace.
Jan. 8-13—Automobile Body Builders' Association Show, Twelfth Regiment Armory.
Jan. 9-12—Society of Automotive Engineers' Annual Meeting.

Jan. 8

10.00 A.M.—National Automobile Chamber of Commerce Export Manufacturers' Convention.
6.30 P.M.—Rubber Association Dinner, Waldorf-Astoria.

Jan. 9

2.30 P.M.—National Motor Truck Committee Meeting.
6.30 P.M.—N. A. C. C. Annual Dinner, Hotel Commodore.

Jan. 10

10.00 A.M.—N. A. C. C. Directors' Meeting.
10.00 A.M.—Franklin Automobile Co.'s Sales Conference, Commodore; Luncheon 1.00 P.M.
Evening—Eastern Oldsmobile Dealers' Meeting-Dinner, Commodore.
6.30 P.M.—Motor and Accessory Manufacturers' Association Dinner, Commodore.

Jan. 11

6.30 P.M.—S. A. E. Dinner, Pennsylvania Hotel.
Hupmobile Luncheon and Dealers' Meeting, Commodore.
New York State Merchants' Association.
Special General Meeting, Truck Members, N. A. C. C.

CHICAGO

Jan. 27-Feb. 3—National Automobile Show, Coliseum and First Regiment Armory.
Jan. 27-Feb. 3—Annual Automobile Salon, Drake Hotel.
Jan. 29-31—Automotive Electrical Association's Annual Meeting, Congress.

Jan. 27

10.00 A.M.—National Automobile Dealers' Association's Directors' Meeting, LaSalle.

Jan. 29

10.00 A.M.—Sixth Annual Convention, N. A. D. A., LaSalle.
8.00 P.M.—Annual Banquet, N. A. D. A., LaSalle.
N. A. C. C. Advertising Managers' Convention (tentative date).

Jan. 30

10.00 A.M.—Concluding Session, N. A. D. A., LaSalle.

Jan. 31

10.00 A.M.—N. A. C. C. Directors' Meeting.
10.00 A.M.—N. A. D. A. Directors' Meeting, LaSalle.
10.00 A.M.—Franklin Automobile Co.'s Sales Conference, Congress; Luncheon, 1.00 P.M.
Evening—Central and Western Oldsmobile Dealers' Meeting-Dinner, LaSalle.
S. A. E. Meeting and Dinner, Congress.

Feb. 1

Hupmobile Luncheon and Dealers' Meeting, Congress.

BOOST GIVEN ROADS AT FARMERS' MEETING

CHICAGO, Dec. 26—The development of an adequate highway transportation system by Federal and State governments was urged here by the representatives of the American Farm Bureau Federation at its fourth annual convention.

A resolution was adopted and sent to members of Congress requesting that the national and State governments take prompt steps to develop a well-rounded transportation system of first grade highways, which would be interstate in their relation.

Co-operative marketing by trucks was urged as a means of solving, to a large extent, the transportation problems of the farmer and as a possible factor in securing better prices for farm produce by the elimination of "excess" middlemen.

CHANGES IN THE TRADE

Baltimore Lexington Co., Inc., has been appointed distributor for the Lexington.

Larson Motor Co. has changed its principal office from Portsmouth to Norfolk, Va.

Leo P. Weeder has joined the Marmon Boston Co., in charge of its used car department.

Hanson-Tyler Auto Co. has taken the Sioux City, Iowa, agency for the Star and Durant.

Chester R. Giddings has taken over the Liberty in Springfield, Mass., succeeding the **William B. Chellis Co.**

R. E. Cortright and **F. A. Roethlisberger,** of South Bend, have taken the Fort Wayne, Ind., Chevrolet agency.

Harry E. Oechsli has returned to Spokane after an absence of several years and will resume handling Ford Motor Co. products.

McCusker-Foulks Co., Milwaukee, has been incorporated by **John Foulks** and **William McCusker,** to act as retail dealer in the Chevrolet.

Packard Deluxe Motor Car Co. has been organized at Peoria, Ill. The incorporators include **W. E. Stedman, W. P. Phillips** and **H. E. Hudson.**

R. D. Rockstead, Milwaukee, Wisconsin distributor of the Lexington and Earl, has also been appointed distributor of the Gardner in the same territory.

Goodyear Rubber Co., Middletown, Conn., has increased its capital stock from $50,000 to $300,000, according to papers filed with the Secretary of State at Hartford.

S. A. Dunham, Syracuse, N. Y. and **Fred L. Whiting** of Jordan have established an agency for Stewart trucks in Syracuse, under the name of **Stewart & Whiting.**

Stewart Motors Corp., Boston, distributor of the Stewart truck in New England for years, is now handling the Columbia. **H. Ross Maddocks** will be in charge of the line.

Ebener-Sauer Co., Milwaukee, has been organized to act as local retail dealer in the Auburn, under the **Herford White Co.,** Milwaukee, distributor in Wisconsin and Upper Michigan.

Bell-Korfmann, Inc., Milwaukee, has been organized to distribute the Rolls Royce in Wisconsin and Upper Michigan. The principals are **R. Ellsworth Bell** and **Calvin L. Korfmann.**

H. J. Strack, Des Moines, will distribute the Columbia in central Iowa, under the name of the **Strack Motor Sales Co.** Quarters have been secured at 1429 Locust Street, Des Moines, Iowa.

Kelley Auto Co. is the latest addition in the motor field in Houston, Texas. The company is composed of **G. W. Kelley** and **John Woolson.** Case cars will be distributed in South Texas.

Moline-Knight Auto Co., Milwaukee, distributor of and dealer in the R & V Knight, announces that **Sidney B. French** has retired as a partner and the business will be continued by **C. E. Bowers.**

Cash-Bissell Co. has been organized at Jacksonville, Fla., and will establish in that city a large garage and service station. Officers are **D. O. Cash,** president and **L. E. Bissell,** secretary and treasurer.

Chapman-Marvin Co. has been organized at Jacksonville, Fla., to establish there an automobile agency. Officers are **H. R. Chapman,** of Jacksonville, president and **Guy Marvin,** secretary and treasurer.

Dade City Motor Co. has been organized at Dade City, Fla., to establish an automotive agency and service station. Officers are **D. D. Covington,** president and **Forest L. Mixen,** secretary and treasurer.

Youngstrom Co. of Des Moines has secured the services of **Hilding Anderson** as shop superintendent. Anderson was formerly connected with the factory branch of the Packard Motor Car Co. at Chicago.

Goff-Caughman Auto Co., Columbia, S. C., has been organized by **Maynard Goff** and **Verner Caughman,** both of that city, and has taken the distributing agency for the Velie in five counties of South Carolina.

Carolina Auto Sales Co., of Columbia, Tenn., has opened a branch dealer agency in Greenville, S. C., it is announced by **C. T. Sumner,** who heads the company. The company handles the Chalmers and Maxwell in the Carolina territory.

Orlando Jordan Co. has been organized at Orlando, Fla., and will distribute the Jordan car in that section of Florida. Officers of the company are **C. C. Corpening,** president; **G. M. Sherman,** vice-president and **Gordon Doss,** secretary and treasurer.

C. L. Hatfield, Decatur, Ill., has purchased the accessory and battery business of **Good Bros.,** that city. This firm ranks with the oldest exclusive accessory firms in the state, having opened for business eleven years ago. The retiring firm was composed of **J. B. Good** and son, **Elmer Good.**

Carolina Auto Sales Co., Chalmers and Maxwell dealers, have opened sales service rooms in Greenville, S. C. The company is a branch of the **Carolina Auto Co.** of Columbia and Newberry and is owned by **C. T. Summers** and **J. W. Smith, Jr.,** of Newberry. **J. D. M. Smith** will be the local manager.

New England Velie Co., Boston, has arranged with a new organization known as the **Fiske Motors, Inc.,** to handle the Velie line at retail in the Boston territory, the former company looking after the wholesale trade. **C. Harold Smith** will manage the Fiske business. He was sales manager for the Velie company.

Tracey Green, Bloomington, Ill., who has been associated with **Thayer Morrow,** distributor of the Dodge Brothers cars in that territory, has embarked in business for himself and has been appointed distributor for the Chevrolet in the central Illinois territory. **T. S. Bunn** distributor of the Chevrolet for several years, will now concentrate on the Nash.

Baltimore Cadillac Co. has been consolidated with the **Mar-Del Mobile Co.,** Baltimore, the new organization to be known as the **Cadillac Co. of Baltimore.** The officers of the new company are **George Miller,** president; **James Muehleisen,** first vice-president; **F. S. Bilven,** second vice-president; **Paul Jones,** secretary and **Earl Williams,** treasurer and general manager.

Arthur J. Doyle has been appointed general manager of the **Universal Motor Car Co.,** Nashville, Tenn. The assistant manager is **Richard H. Payne;** the superintendent of the service department, **Roy Lewis** and the manager of the parts department, **R. W. Blake.** The company handles Ford Motor Co. products. **J. M. Walker** is president, **John K. Walker,** vice-president and **A. L. Crabtree,** secretary.

C. C. Davis, Galesburg, Ill., has purchased the interest of his partner, **W. W. Culver,** in the **Davis-Culver Motor Co.** The company has been distributing Studebaker cars in the Knox County territory. Davis will continue the business under the name of the **C. C. Davis Motor Co.** For a number of years Davis served as distributor at Bloomington, Ill., and for a number of years was located in Oklahoma City. He has also been engaged in the automotive trade in California and Indiana.

Studebaker Motor Corp. has opened a factory branch in Indianapolis in the quarters formerly occupied by the **Sterling Motors Co.** Until a short time ago the Studebaker line was handled by the **Buck Salon Co.,** which recently took over the Dort and Chandler for distribution throughout the state. The Studebaker contract and territory for a limited portion of the state had been in effect for years. **W. J. Owens,** retail sales manager, and **George Mander,** wholesale representative, are to be in charge of the branch.

30,000 PEOPLE VISIT FORT WORTH EXHIBIT

FORT WORTH, TEX., Dec. 26—Thirty thousand people attended Fort Worth's first "closed car week."

Five thousand crowded into Main Street each day at noon to witness the parade. That many inspected the specially decorated salesrooms in the evenings.

Only closed car models were displayed.

The parade, which was participated in by forty dealers, started promptly at noon each day and traversed thirty blocks downtown.

Sales were increased by the show.

Closed car possibilities have never been sufficiently demonstrated in the Southwest. Automobile owners were inclined to look upon this particular type of car as a luxury, or as one fitted for the cold climate. Texas, they said, was too balmy for closed cars. But this feeling is being rapidly dissipated under the careful campaigning of the dealers, and as a consequence, sales of closed cars have been heavier this year than ever known before.

"Closed Car Week" contributed to this.

Service Truck Reorganizing

CHICAGO, Dec. 21—Reorganization of the Service Motor Truck Co. of Wabash, Ind., is under way under the direction of a committee of creditors which has placed Paul Moore, formerly director of sales for the company, in charge as general manager. Moie Cook has resigned as secretary and has become associated with the Indiana Truck Motor Co. Pending the reorganization, the Service company is operating in the usual manner and, according to members of the committee, is receiving an increasing number of orders.

Manages Janesville Chevrolet Plant

MILWAUKEE, Dec. 26—T. E. Houghton, formerly assistant manager of the Flint works of the Chevrolet Motor Co., has been transferred to Janesville, Wis., as manager of the new Chevrolet plant established in the former works of the Samson Tractor Co., which is being enlarged and a Fisher body shop added. Production will start about Jan. 15.

ASSOCIATION ACTIVITIES

Regrinders Association Formed

INDIANAPOLIS, Dec. 26—The Central Cylinder Regrinders Association has been formed here at a meeting of 25 of the 60 cylinder regrinders of the state.

The aims of the new organization are to bring about higher standards, and some sort of standardization in methods. An educational campaign is to be evolved to educate the motorists on the true cylinder regrinding situation.

T. A. Meyer of Indianapolis was elected president, with W. W. Adams, Fort Wayne, vice-president; J. T. Andrews, Indianapolis, secretary, and George W. Kemp, Muncie, treasurer. The board of directors includes the officers and the following: Val. H. Lindenschmidt, Evansville; H. B. Shank, Fort Wayne, and V. J. Thampher, Connersville.

Joseph T. Pflume of Cincinnati; Anten Vonnegutt, Indianapolis, and M. R. Westmoreland of St. Louis were the speakers. Several committees were appointed to report at the next meeting, to be held here Feb. 21. The heads of these committees are C. W. Yount, Indianapolis, membership; G. B. Fields, Terre Haute, advertising and sales; F. F. Cartwright, Indianapolis, dues and finance, and George W. Kemp, standards, adjustments and education.

Atlanta Meeting This Month

ATLANTA, Dec. 21—The Atlanta Automobile Association announces that dates for the 1923 Southern Automobile Show to be held again at the Auditorium here, have been selected for the week of Feb. 17 to 24, and that Virgil W. Sheppard will be general manager for the third successive year.

Tentative plans for the show are to be discussed by the dealers at the annual convention of the Atlanta association to be held this month, and officers of the association also will be elected at this meeting.

Sheppard advises that all space for automobile and truck display purposes at the auditorium has already been disposed of, and that the association will construct a mezzanine balcony that will provide several thousand additional feet of space. Approximately 75 per cent of the accessory has also been taken, and indications are that the 1923 show will undoubtedly be the biggest event of its kind ever held in the southern field.

Houston Salesmen to Organize

HOUSTON, TEXAS, Dec. 26—The automobile salesmen of Houston are to form an association composed of more than 125 men who make a business of selling automobiles. Eventually it is planned to bring into the organization all the automobile salesmen in South Texas. When the association is formed it will affiliate with the Houston Automobile Trades Association, making the Houston motor business 100 per cent organized. R. M. Chamberlain, C. W. Pitschmann, C. Manford and F. W. Mozart are handling the preliminary features of the organization.

Northwest Tractor Body Formed

MINNEAPOLIS, Dec. 26—The Northwest Implement and Tractor Association has been organized at a meeting here of members of the Northwest Tractor Trade Association and the Minneapolis Implement Club. The latter was made up of implement and farm equipment dealers and numbered 40 members, while the association of the former, composed of tractor men and formed five years ago, had 35 members. J. E. Gardner, president of the tractor organization, is the head of the new association. These organizations have sponsored exhibits held annually in connection with the automobile show and the automobile and implement section of the annual Minnesota state fair.

Discuss Elgin Future

CHICAGO, Dec. 21—Plans to reorganize the Elgin Motor Corp. now in the hands of a receiver and resume the manufacture of cars were discussed yesterday at a meeting of creditors with the referee in bankruptcy and representatives of the stockholders.

It was announced that stockholders have subscribed $150,000 toward a fund to be used in getting the company out of its difficulties. It was suggested that this money be used to resume operations at once. The company's liabilities are $833,649 and its assets are approximately $400,000. Another meeting is to be held in the near future.

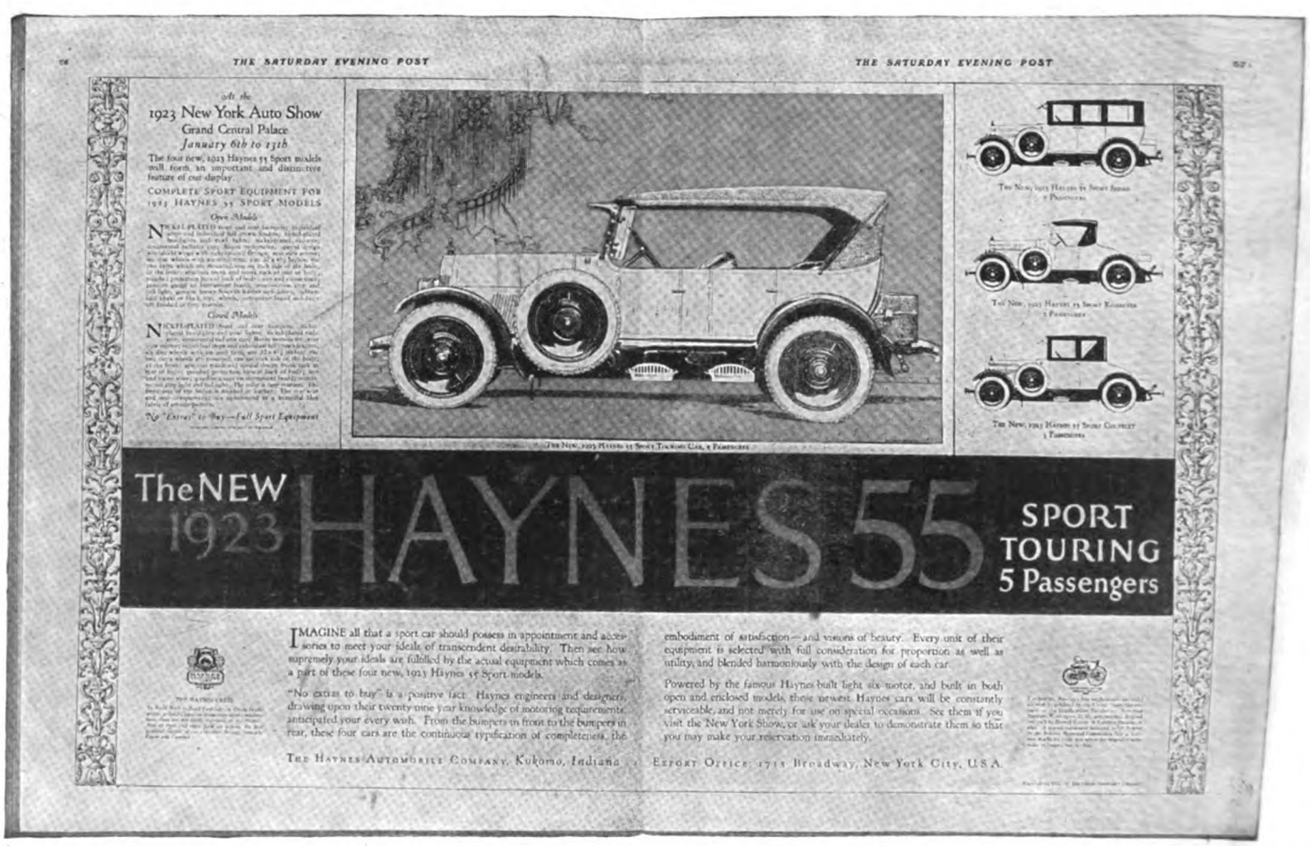
---



fifteenth year of Lexington success

Digitized by Google

The Haynes Automobile Company buys greatest advertisement in

The Saturday Evening Post

to assist dealers sell Haynes cars

This sales-compelling center spread color advertisement

will be the largest and most impressive presentation of its kind appearing in THE SATURDAY EVENING POST—and will undoubtedly create a tremendous interest and buying desire for the

New 1923 Haynes 55 Sport Series

—already famous for the "No Extras to Buy" plan equipment, sent from the factories with every accessory which the heart can desire.

These Haynes cars are bringing still greater success for Haynes dealers in a year which has proved the greatest in Haynes history.

Are you ready to sign a Haynes franchise? There are still some rich territories open.

Write, telephone or telegraph for an appointment. It will be confidential if you desire. Address Department 1252.

THE HAYNES AUTOMOBILE COMPANY, *Kokomo, Indiana*, Export Office: 1715 Broadway, New York City, U.S.A.
